Handbook of Economic Evaluation of HIV Prevention Programs David R. Holtgrave,2013-06-29 If resources for HIV prevention efforts were truly unlimited then this book would be entirely unnecessary In a world with limitless support for HIV prevention activities one would simply implement all effective or potentially effective programs without regard to expense We would do everything useful to prevent the further spread of the virus that has already claimed hundreds of thousands of lives in the United States and millions of lives worldwide Unfortunately funding for HIV prevention programs is limited Even though the amount of available funding may seem quite large especially in the United States it is still fixed and not sufficient to meet all needs for such programs This was very well illustrated in the summer of 1997 when over 500 community based organizations applied for a combined total of 18 million of HIV prevention funding from the U S Centers for Disease Control and Prevention CDC Less than one fifth of these organizations received support via this funding mechanism Hence although 18 million may seem like a large amount of money at first blush it is not enough to meet all of the prevention needs that could be addressed by these community based organizations *Compendium of HHS Evaluations and Relevant Other Studies* HHS Policy Information Center (U.S.),1990

approaches to prevention STD and HIV infection rates remain fairly constant Targeting implementation and monitoring of interventions have posed widespread problems and the recent spate of cuts to prevention budgets has made these roadblocks even more challenging It is clear that working in sexual health requires both a deeper understanding of STI HIV epidemiology and an ongoing quest for up to date realistic prevention strategies The New Public Health and STD HIV Prevention offers readers leading edge access to both Focusing on social determinants of sexual health at risk populations critical factors in approaches to prevention and reviews of new research this authoritative volume explores areas as varied as HPV prevention technology based interventions migration as a factor in disease transmission and competencies key to effective leadership in the field Dispatches from the frontlines of theory research and practice in the U S and abroad include Personal risk public impact balancing individual rights and STD HIV prevention Distribution of prevention resources and its impact on sexual health Prevention measures in diverse populations of women Toward a better approach to preventive interventions with men who have sex with men Adolescent sexual health and STIs Reducing disparities in sexual health lessons from the campaign to eliminate infectious syphilis Public health professionals of all backgrounds interested in or working in improving sexual health will find The New Public Health and STD HIV Prevention an indispensable guide to conceptualizing the problems and clarifying possible solutions

Monitoring and Evaluation in Health and Social Development Stephen Bell, Peter Aggleton, 2016-02-01 New approaches are needed to monitor and evaluate health and social development Existing strategies tend to require expensive time consuming analytical procedures The growing emphasis on results based programming has resulted in evaluation being conducted in order to demonstrate accountability and success rather than how change takes place what works and why The tendency to monitor and evaluate using log frames and their variants closes policy makers and practitioners eyes to the sometimes unanticipated means by which change takes place Two recent developments hold the potential to transcend these difficulties and to lead to important changes in the way in which the effects of health and social development programming are understood First there is growing interest in ways of monitoring programmes and assessing impact that are more grounded in the realities of practice than many of the results based methods currently utilised Second there are calls for the greater use of interpretive and ethnographic methods in programme design monitoring and evaluation Responding to these concerns this book illustrates the potential of interpretative methods to aid understanding and make a difference in real people s lives Through a focus on individual and community perspectives and locally grounded explanations the methods explored in this book offer a potentially richer way of assessing the relationships between intent action and change in health and social development in Africa Asia Europe and the Americas
