

The background of the book cover is a photograph of a modern building's exterior. It features a grid of large glass windows and concrete structural elements. A large, dark, leafy tree is positioned in the center, its branches and leaves partially obscuring the building behind it. The overall color palette is dominated by the greys of the concrete and the various shades of green from the foliage.

Evaluating Sustainable Development In The Built Environment:

Evaluating Sustainable Development Peter S. Brandon, Patrizia Lombardi, 2009-02-18 Sustainable development has been characterised by an emphasis on environmental issues and an ad hoc approach to structuring the subject which hinders the development of knowledge in a systematic way. The built environment contributes significantly to the environment but is also one of the major factors in determining whether a community is sustainable in the longer term. A structure is required which aids definition, provides a common set of values, establishes measurement methods to define progress and suggests a management system and decision protocol which enables practitioners to engage and use the resultant structures and information. This book provides a suggested structure in which all aspects of sustainable development can be included together with a set of evaluation techniques which can be used within the structure to provide assistance to decision making.

Future Challenges in Evaluating and Managing Sustainable Development in the Built Environment Peter S. Brandon, Patrizia Lombardi, Geoffrey Q. Shen, 2017-04-05 Future Challenges in Sustainable Development within the Built Environment stimulates and reinterprets the demands of Responsible and Sustainable Development in the Built Environment for future action and development. It examines the methods of evaluation, the use of technology, the creation of new models and the role of human factors for examining and developing the subject over the next twenty years. **Evaluating**

Sustainable Development in the Built Environment Peter S. Brandon, Patrizia Lombardi, 2010-12-01 The first edition was extremely well received, providing an introduction and insight to this important topic in a comprehensive yet easy to read form. It was chosen to be issued to the representatives of the organizations from the G8 and G20 countries attending the University Summit held in Turin in 2009 which addressed the issue of how education and research can assist sustainable development. The second edition, completely updated to reflect the significant advances and new insights that have been made since publication of the first edition, focuses on two main issues: Facilitating a dialogue between all stakeholders so that the complexity of the problem can be exposed, structured and communicated; Understanding how to assess progress in sustainable development. It continues to provide coherent guidance on the techniques that can be used to assess sustainable development in a rigorous manner. The approach is introduced using illustrations and case studies together with follow up references. It remains the ideal starting point for those trying to get a handle on the subject and for those who wish to examine a structured and systematic approach to the evaluation of sustainable development in the built environment.

Evaluating Sustainable Development in the Built Environment Peter S. Brandon, Patrizia L. Lombardi, 2009

Evaluation of the Built Environment for Sustainability Vincenzo Bontivegna, P.S. Brandon, Patrizia Lombardi, 2003-09-02 Sustainability in the built environment is a major issue facing policy makers, planners, developers and designers in the UK, Europe and worldwide. The measuring of buildings and cities for sustainability becomes increasingly important as pressure for green sustainable development translates into policy and legislation. The problems of such measurement and evaluation

are presented by the authors in contributions which move from the general to the particular e g from a general framework for an environmentally sustainable form of urban development to a specific input output model application to environmental problems The book is divided into three parts the first covers city models and sustainable systems research programmes environmental policies green corporations and collaborative strategies to make urban development more sustainable part two discusses the problems of evaluating the built environment in planning and construction covering economic and environmental methods and construction development and regeneration processes part three illustrates a number of applications using different approaches and techniques and referring to a range of environmental aspects of the natural and built environment from maintaining historic buildings to transport management and air pollution monitoring

Development and Management of Sustainable Cities Tan Yigitcanlar,Md. (Liton) Kamruzzaman,2019-04-30 The concept of sustainable urban development has been pushed to the forefront of policymaking and politics as the world wakes up to the impacts of climate change and the destructive effects of the Anthropocene Climate change has emerged to be one of the biggest challenges faced by our planet today threatening both built and natural systems with long term consequences which may be irreversible While there is a vast body of literature on sustainability and sustainable urban development there is currently limited focus on how to cohesively bring together the vital issues of the planning development and management of sustainable cities Moreover it has been widely stated that current practices and lifestyles cannot continue if we are to leave a healthy living planet to not only the next generation but also to the generations beyond The current global school strikes for climate action known as Fridays for Future evidences this The book advocates the view that the focus needs to rest on ways in which our cities and industries can become green enough to avoid urban ecocide This book fills a gap in the literature by bringing together issues related to the planning development and management of cities and focusing on a triple bottom line approach to sustainability **Fundamentals of Environmental Chemistry, Third Edition** Stanley E.
