An Ethico-Political Evaluation of the Necessity for a Referendum over any Future German Olympic Bid Lucia Gosebrink,2023-12-26 The implementation of referenda in advance to an Olympic bid is common in Western democratic countries In many cases they have produced negative results ending the aspiration of Olympic Games on the spot Germany is no exception to this case While recent research has predominantly investigated the possible reasons why past referenda have failed the aim of this book is to evaluate the necessity of a referendum as a tool in the first place Since a referendum is no formal requirement by the International Olympic Committee IOC its application is examined on an ethico political level

Therefore the advantages and disadvantages of a referendum in terms of any future German Olympic bid are analysed and discussed from a political civil and German Olympic Sports Confederation DOSB perspective Based on the findings this work rejects the necessity of a referendum before a German Olympic bid as the alignment of ethico political considerations analysed does not seem to be sufficiently pronounced in the de jure and de facto implementation of this tool Social Multi-Criteria Evaluation for a Sustainable Economy Giuseppe Munda,2007-12-22 The real world is characterized by deep complexity May be a rather unremarkable observation yet it has important implications on the manner policy problems are represented and decision making is framed Is contemporary democracy compatible with science in real world policy making This book gives answers in the affirmative It also asserts that this congruence can have positive implications not only in terms of economic prosperity but also when dealing with the difficult sustainability policy problems of our millennium To address contemporary issues economic science will have to expand its empirical relevance by introducing more and more realistic assumptions to its models One of the most interesting research orientations in recent times in the field of public economics is the explicit attempt to take account of political constraints interest groups and collusion effects One of the main novelties of this book is its establishment of a clear relationship between social and public choice theories on one hand and multiple criteria decision analysis on the other The pioneering research developed by Arrow and Raynaud 1986 has shown that the relationships between multi criteria decision theory and social choice are clear and relevant The main directions of cross fertilization between these research fields are twofold 1 Multi criteria decision theory can be an adequate framework for applied social and public choice 2 Social choice can produce interesting theoretical results for ensuring the ax matic consistency needed by multi criterion aggregation conventions
