collection, evaluation, and dissemination of drug interaction information by the APha Drug Interactions Evaluation Program

by Frank J. Ascione, Pharm. D.

The American Pharmaceutical Association's Drug Interactions Evaluation Program (DIEP) is a multidisciplinary group approach to the evaluation and dissemination of drug interaction information. More than 200 health-care professionals from dentistry, medicine, and pharmacy participate in the Program, with most serving as members of Scientific Review Panels or Practitioner Panels. The major results of this group effort have been the publication of *Evaluations of Drug Interactions-1973* (EDI-1973) and its 1974 Supplement. A complete revision of EDI is scheduled to be completed in mid-1976.

The Drug Interactions Evaluation Program, originally called the Drug Interactions Project, was established by APhA in response to the expressed needs of its members for useful and accurate drug interaction information. During the early stages of this project, the staff mainly coordinated communications between panel members and monograph authors. There was little, if any, staff input in the content of the monograph, except for editorial changes.

However, it became apparent in the late stages of the production of EDI-1973 that this approach was not resolving satisfactorily many comments made during the initial review. The process of compiling the panel members' comments and sending them to the monograph author to incorporate into the monograph was very time-consuming. Moreover, because of differences in the various authors' interests, motivation, or writing ability, there was considerable variability in the content and quality of the monographs.

Presented at the Eleventh Annual Meeting, Drug Information Association, Boston, June 18-20, 1975.

Therefore, during the production of the 1974 Supplement, it was decided to do more in-house review of the monograph content and to exert more staff control over the DIEP review process. To do this task effectively, a data base containing pertinent information about drug interactions had to be developed. Development of such a data base was begun in mid-1974.

THE DATA BASE

The first step was to determine the type of information needed by the DIEP staff. It was decided that copies of the published literature rather than abstracts were necessary. Moreover, comprehensive and current information about a particular drug interaction was also required. Additionally, current information about the pharmacokinetics, pharmacology, and toxicity of the drugs involved in the drug interaction was also needed.

Since the DIEP has limited staff and limited funds, cost and time were important factors to be considered when developing the data base. Therefore, the system designed to store this data base had to be inexpensive, easy to develop and implement, and simple to use. The system had to allow quick access to the necessary information about a particular drug interaction. Furthermore, because the publication of the next edition of EDI is on a tight schedule, the data base needed to be operational as quickly as possible.

The data base is now functioning and contains more than 3000 published articles on drug interactions. This information is stored either in hard copy or in microfiche. Five by eight-inch index cards are used to catalog this information, filed by author and, in some cases, by drug name. It is anticipated that a comprehensive cross-reference index by drug name will be completed sometime next year.
