Evaporative Air Conditioning Handbook:

Evaporative Air Conditioning Handbook John Watt, 2012-12-06 Air conditioning boosts man's efficiency no less than his comfort Air conditioned homes offices and factories unmistakably raise human productivity and reduce absenteeism turnover mistakes accidents and grievances especially in summer Accordingly many employers every year cool workrooms and offices to raise summer profits Employees in turn find cool homes enhancing not only comfort and prestige but also personal efficiency and income With such economic impetus low cost summer cooling must irresistibly spread to all kinds of occupied buildings Refrigeration provides our best cooling serving well where people are closely spaced in well constructed shaded and insulated structures However its first and operating costs bar it from our hottest commercial industrial and residential buildings Fortunately evaporative cooling is an economical substitute in many regions First used in Southwest homes and businesses and in textile mills it soon invaded other fields and climates In 1946 six firms produced 200 000 evaporative coolers in 1958 25 firms produced 1 250 000 despite the phenomenal sale of refrigerating window air conditioners Though clearly secondary to refrigeration evaporative cooling is 60 to 80 percent is economical for moderate income groups and cheaper to buy and operate Thus it climates where summers are short Moreover it cheaply cools hot thinly constructed mills factories workshops foundries powerhouses farm buildings canneries etc where refrigerated cooling is prohibitively expensive

Evaporative Air Conditioning Handbook John R. Watt, Will K. Brown, 1997 Providing guidance to design engineers and contractors this book illustrates in full detail how operational savings of 50 to 75 percent can be achieved with evaporative cooling technologies compared to equivalent electric based systems Thorough in scope the book addresses the technical aspects of evaporative cooling as well as a broad range of specific commercial and industrial applications Topics include cost analysis technology and equipment options application guidelines and operational and performance characteristics The third edition adds a new chapter which shows how evaporative cooling can be integrated into large scale HVAC systems with discussions of achievable savings maintenance costs cooling tower and finned coil indirect cooling wet bulb economizers precooling condensed air makeup air and return air humidity control and more including sample calculations as well as demonstration and engineering data

Cabeza,Claes-Göran Granqvist,2015-02-27 Climate change is one of the most important environmental problems faced by Planet Earth The majority of CO₂ emissions come from burning fossil fuels for energy production and improvements in energy efficiency shows the greatest potential for any single strategy to abate global greenhouse gas (GHG) emissions from the energy sector Energy related emissions account for almost 80% of the EU's total greenhouse gas emissions The building sector is the largest energy user responsible for about 40% of the EU's total final energy consumption In Europe the number of installed air

conditioning systems has increased 500% over the last 20 years but in that same period energy cooling needs have increased more than 20 times. The increase in energy cooling needs relates to the current higher living and working standards. In urban environments with low outdoor air quality the general case this means that in summer time one cannot count on natural ventilation to reduce cooling needs. Do not forget the synergistic effect between heat waves and air pollution which means that outdoor air quality is worse in the summer aggravating cooling needs. Over the next few years this phenomenon will become much worse because more people will live in cities more than 2 billion by 2050 and global warming will aggravate cooling needs. An overview of materials to lessen the impact of urban heat islands. Excellent coverage of building materials to reduce air conditioning needs. Innovative products discussed such as Thermo and Electrochromic materials.

[Integrated Electricity Resource Planning](#) A. de Almeida, Arthur H. Rosenfeld, Jacques Roturier, Jorgen Norgard, 2012-12-06. Since the mid-seventies, electric utilities were faced with escalating construction costs, growing environmental siting constraints and increasing uncertainty in demand forecasting. To cope with the increasing demand for energy services, utilities can either invest in supply-side options (new generation, transmission and distribution facilities) or in demand-side options. Demand-side options include policies, programmes, innovative pricing schemes and high-efficiency end-use equipment, providing the same or better level of services but using less energy or peak power. Recent experience in both North America and Europe shows that demand-side options are usually cheaper and less damaging from the environmental point of view and also their potential can be tapped in a shorter term than other supply-side options. This workshop was directed at the discussion and analysis of cost-effective methodologies to achieve the supply of electric energy services at minimum cost and minimum environmental impact. The

programme included new developments in power planning models which can integrate both supply side and demand side actions Quantitative assessments of the environmental impact of different supply demand strategies were analyzed Planning models which deal with uncertainty and use multicriteria approaches were presented Case studies and experiments with innovative concepts carried out by utilities in several countries were discussed Load modelling and evaluation of demand side programmes was analyzed Additionally the potential for electricity savings in the industrial commercial and residential sectors was presented New research directions covering planning models programmes and end use technologies were identified
