**The Metrics of Material and Metal Ecology** M.A. Reuter, U.M.J. Boin, A. van Schaik, E. Verhoef, K. Heiskanen, Yongxiang Yang, G. Georgalli, 2005-11-02 This book is a must for individuals and companies that have an interest in developing sustainable technology and systems in the complex Web of Metals on a first-principles technological and economic basis with a focus to the minerals, metals, and product manufacturing industries. In this inter-intra and trans-disciplinary book, the material-metal cycle will be central, addressing technology as the basis for achieving sustainability within the system of primary mineral and metal producing and the consumer product material cycles linked to nature's cycles. The following major topics, not exclusive, are discussed in a detail which will satisfy company CEOs and students of environment, engineering, economics, and law alike: i) industrial ecology ii) system engineering concepts iii) development of future breakthrough technology as well as optimization of present technology iv) process fundamentals e.g. thermodynamics, separation, physics, transport processes etc. v) product manufacture and design for recycling vi) environmental legislation and vii) technology as a basis for achieving sustainability within our present society. The book discusses contentious issues such as the limits of recycling determined by physics, chemistry, economics, and process technology, therefore providing the reader with a fundamental basis to understand and critically discuss the validity of environmental legislation. Furthermore, the Web of Metals, i.e. the dynamic interconnection of metal and material cycles and product systems, will reveal that if the application of environmental evaluation techniques such as material flow analysis, life cycle assessment etc. are not carried out on a
