Canadian Science, Technology, and Innovation Policy G. Bruce Doern,David Castle,Peter W.B. Phillips,2016-06-01 Canadian Science Technology and Innovation Policy presents new critical analysis about related developments in the field such as significantly changed concepts of peer review merit review the emergence of big data in the digital age and the rise of an economy and society dominated by the internet and information The authors scrutinize the different ways in which federal and provincial policies have impacted both levels of government including how such policies impact on Canada's natural resources They also study key government departments and agencies involved with science technology and innovation to show how these organizations function increasingly in networks and partnerships as Canada seeks to keep up and lead in a highly competitive global system The book also looks at numerous realms of technology across Canada in universities business and government and various efforts to analyze biotechnology genomics and the Internet as well as earlier technologies such as nuclear reactors and satellite technology The authors assess whether a science and technology centred innovation economy and society has been established in Canada one that achieves a balance between commercial and social objectives including the delivery of public goods and supporting values related to redistribution fairness and community and citizen empowerment Probing the nature of science advice across prime ministerial eras including recent concerns over the Harper government's claimed muzzling of scientists in an age of attack politics Canadian Science Technology and Innovation Policy provides essential information for academics and practitioners in business and government in this crucial and complex field **Seeds, Science, and Struggle** Abby Kinchy,2012-07-20 An examination of how advocates for alternative agriculture confront science based regulation of genetically engineered crops Genetic engineering has a wide range of cultural economic and ethical implications yet it has become almost an article of faith that regulatory decisions about biotechnology be based only on evidence of specific quantifiable risks to consider anything else is said to politicize regulation In this study of social protest against genetically engineered food Abby Kinchy turns the conventional argument on its head Rather than consider politicization of the regulatory system she takes a close look at the scientization of public debate about the contamination of crops resulting from pollen drift and seed mixing Advocates of alternative agriculture confront the scientization of this debate by calling on international experts carrying out their own research questioning regulatory science in court building alternative markets and demanding that their governments consider the social and economic impacts of the new technologies Kinchy focuses on social conflicts over canola in Canada and maize in

Mexico drawing out their linkages to the global food system and international environmental governance The book ultimately demonstrates the shortcomings of dominant models of scientific risk governance which marginalize alternative visions of rural livelihoods and sustainable food production

Integration of Insect-Resistant Genetically Modified Crops within IPM Programs Jörg Romeis, Anthony M. Shelton, George Kennedy, 2008-07-01 Insect pests remain one of the main constraints to food and fiber production worldwide despite farmers deploying a range of techniques to protect their crops Modern pest control is guided by the principles of integrated pest management IPM with pest resistant germplasm being an important part of the foundation Since 1996 when the first genetically modified GM insect resistant maize variety was commercialized in the USA the area planted to insect resistant GM varieties has grown dramatically representing the fastest adoption rate of any agricultural technology in human history The goal of our book is to provide an overview on the role insect resistant GM plants play in different crop systems worldwide We hope that the book will contribute to a more rational debate about the role GM crops can play in IPM for food and fiber production

The Impact of Genetically Engineered Crops on Farm Sustainability in the United States National Research Council, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Committee on the Impact of Biotechnology on Farm-Level Economics and Sustainability, 2010-08-26 Since genetically engineered GE crops were introduced in 1996 their use in the United States has grown rapidly accounting for 80 90 percent of soybean corn and cotton acreage in 2009 To date crops with traits that provide resistance to some herbicides and to specific insect pests have benefited adopting farmers by reducing crop losses to insect damage by increasing flexibility in time management and by facilitating the use of more environmentally friendly pesticides and tillage practices However excessive reliance on a single technology combined with a lack of diverse farming practices could undermine the economic and environmental gains from these GE crops Other challenges could hinder the application of the technology to a broader spectrum of crops and uses Several reports from the National Research Council have addressed the effects of GE crops on the environment and on human health However The Impact of Genetically Engineered Crops on Farm Sustainability in the United States is the first comprehensive assessment of

the environmental economic and social impacts of the GE crop revolution on U S farms It addresses how GE crops have affected U S farmers both adopters and nonadopters of the technology their incomes agronomic practices production decisions environmental resources and personal well being The book offers several new findings and four recommendations that could be useful to farmers industry science organizations policy makers and others in government agencies

Sustainable Biotechnology Adoption in Nigeria to Reduce Food Insecurity Uche M. Nwankwo, 2010 To make innovations work commercially among the target group requires institutional approach that can anticipate and predict users urgent needs through participation Conversely to make innovations work technically requires a pile of junk and good imagination according to Thomas Edison Biotechnology no doubt is a significant innovation that can enable farmers in developing countries increase productivity and manage their products Nevertheless biotech application is surrounded with many controversial debates These controversies have affected its perception among farmers and consumers alike Using a mixed method approach empirical data were gathered from farmers and extension agents in six geopolitical divisions of Nigeria to determine factors capable of ensuring sustainable biotech adoption Results revealed that the probability of biotech adoption is dependent on a cause and effect relationship
