Handbook of Alternative Theories of Economic Development Erik S. Reinert,Jayati Ghosh,Rainer Kattel,2016-09-28 The Handbook of Alternative Theories of Economic Development explores the theories and approaches which over a prolonged period of time have existed as viable alternatives to today s mainstream and neo classical tenets With a total of 40 specially commissioned chapters written by the foremost authorities in their respective fields this volume represents a landmark in the field of economic development It elucidates the richness of the alternative and sometimes misunderstood ideas which in different historical contexts have proved to be vital to the improvement of the human condition The subject matter is approached from several complementary perspectives From a historical angle the Handbook charts the mercantilist and cameralist theories that emerged from the Renaissance and developed further during the Enlightenment From a geographical angle it includes chapters on African Chinese Indian and Muslim approaches to economic development Different schools are also explored and discussed including nineteenth century US development theory Marxist Schumpeterian Latin American structuralism regulation theory and world systems theories of development In addition the Handbook has chapters on important events and institutions including The League of Nations The Havana Charter and UNCTAD as well as on particularly influential development economists Contemporary topics such as the role of finance feminism the agrarian issue and ecology and the environment are also covered in depth This comprehensive Handbook offers an unrivalled review and analysis of alternative and heterodox theories of economic development It should be read by all serious scholars teachers and students of development studies and indeed anyone interested in alternatives to development orthodoxy **Economics of Technological Change** Thomas L. Beane,2007 This book brings together a collaboration of technological advancements and how they have influenced the world s economy These include production efficiency industrial innovation regional developments and issues economic growth **Technological Change, Economic Development and Space** Cristoforo S. Bertuglia,Manfred M. Fischer,Giorgio Preto,2012-12-06 The pressures of global competition are affecting regions throughout the world and making it increasingly necessary to understand the complex underlying mechanisms and the potential for innovation offered by new technology Success in economic restructuring

depends not only on the technology itself but the professional and entrepreneurial skills available and the support of provided by institutions and information networks The very local nature these phenomena which are critical to the innovative propensity of firms operating within the region introduces an inevitable spatial dimension The time therefore seems ripe to bring together contributions from scholars working in different but related disciplines with the aim of investigating the triangular relationship between technological change economic development and space The present volume offers a compact review of current theoretical developments and valuable insights deriving from recent empirical studies carried out both within Europe and elsewhere All those contributing to this volume are actively involved in research in the field Without their intellectual contribution and willingness to participate in this joint project the book would not have been possible We should like in addition to thank Angela Spence for her capable assistance in coordinating the various stages of preparation of the book as well as her translation work and careful linguistic editing Thanks also go to Paola Stasi for her meticulous copy editing and help in preparing the indices Their work has been invaluable in moulding together in a single volume contributions from so many different sources

The Economics of Innovation, New Technologies and Structural Change Cristiano Antonelli, 2014-04-08 The ongoing process of revising and rethinking the foundations of economic theory leads to great complexities and contradictions at the heart of economics Economics of innovation provides a fertile challenge to standard economics and one that can help it overcome its many criticisms This authoritative book from Cristiano Antonelli provides a systematic account of recent advances in the economics of innovation By integrating this account with the economics of technological change this exceptional book elaborates an understanding of the effects of the introduction of new technologies This excellent comprehensive account from respected expert Antonelli will be much appreciated within the innovation economics community yet it is also a book that should be read by all those with either a private or professional interest in economic theory

The Economics of Knowledge Generation and Distribution Pier Paolo Patrucco, 2014-09-25 Contemporary capitalistic systems have been undergoing profound transformations determined by the transition towards the so called knowledge based economy i e a competitive system based on the capabilities firms have to create use and circulate knowledge These transformations concern both the characteristics of productive and innovative processes and the resources used in these activities This book captures these changes where traditional R D investments undertaken internally by firms are increasingly and strategically complemented by external sources of innovation and new knowledge Collaborations between

firms and between firms and other organizations as well as the mobility of human capital are strategic processes in order to share and circulate knowledge and competencies They are also key determinants in the creation of new knowledge and innovation and ultimately in growth dynamics The circulation and distribution of knowledge is now a key input in the production of knowledge Knowledge and innovation are understood as the result of collective and interactive processes at the system level and less at the micro level In other words new knowledge production is less and less the result of individualistic behaviours of the firms and much more the effect of explicit and pro active interactions and transactions put in place by local networks of innovators In this perspective economic space is much more defined by the quality of the interactions among actors rather than by their mere technological sectoral or geographical proximity This book brings together new conceptual and empirical contributions and blends the analysis of the technological and geographical spaces in which innovation and knowledge are produced

Inequality, Economic Growth, and Technological Change Volker Grossmann, 2012-12-06 The book examines the relationship between inequality growth and technological progress It provides a broad overview of the existing literature and introduces specific innovative aspects about the impact of inequality and redistribution on growth when growth is driven by human or physical capital investments as well as the impact of technological progress and accumulation on the distribution of earnings There is a special focus on the role of social comparison redistributive taxation and new information technologies for the relationship between inequality and growth The analytical part of the book mainly consists of endogenous growth models

The Regional Economics of Technological Transformations Roberta Capello, Camilla Lenzi, 2021-08-30 The Regional Economics of Technological Transformations provides a comprehensive overview of 40 technological transformations in Europe and their socio economic impact with a particular emphasis on the regional dimension of the phenomena The authors employ extensive original data and robust quantitative methods to analyse technological change in all regions of the 27 EU countries plus the UK and shed light on this trend for Europe and beyond Structured in four parts the book first looks at conceptual definitions empirical measurements and expected impacts on both the economic performance GDP and productivity growth and the labour market and then moves on to analyse where 40 technological transformation actually takes place in Europe and the reasons for this Next it offers original empirical evidence on the impacts of the different transformations and of their intertwined effects on both the economy and the society Finally the book explores the policy implications of this technological transformation This book will be valuable reading for advanced students researchers and policymakers working across regional economics industrial economics and innovation policy It will be of primary interest to regional scientists interested in the field who may enjoy the conceptual and empirical solutions to the study of a very complex timely and still largely unexplored theme Sociologists engineers and political economists can benefit from the book's analysis noting the urgency of the development of new ethical rules governing the new digital and labour markets Finally the book may appeal to policymakers interested in opportunities

to increase regional competitiveness and sustainability goals through the advent of 4.0 technologies

Agriculture and Rural Development in a Globalizing World Prabhu Pingali, Gershon Feder, 2017-05-08 Rapid structural transformation and urbanization are transforming agriculture and food production in rural areas across the world. This textbook provides a comprehensive review and assessment of the multi-faceted nature of agriculture and rural development, particularly in the developing world where the greatest challenges occur. It is designed around five thematic parts: Agricultural Intensification and Technical Change; Political Economy of Agricultural Policies; Community and Rural Institutions; Agriculture, Nutrition, and Health; and Future Relevance of International Institutions. Each chapter presents a detailed but accessible review of the literature on the specific topic and discusses the frontiers in research and institutional changes needed as societies adapt to the transformation processes. All authors are eminent scholars with international reputations who have been actively engaged in the contemporary debates around agricultural development and rural transformation.

Non-Fossil Energy

Development in China Yunzhou Zhang, 2018-11-27 Nonfossil Energy Development in China: Goals and Challenges explores the development of non-fossil energy sources, which is very important for China to protect its energy supply, deal with climate change, and adjust its energy structure. At present, the development of energy and electricity is undergoing profound change. The core and most prominent feature is the sudden emergence of clean energy exerting a decisive influence on the future energy industry. Due to history and resource limitation, a series of problems in the energy development of China have existed for a long time, such as poor energy structure, serious environmental pollution, large carbon emissions, low energy efficiency, regional supply and demand imbalances. The Chinese government has set the development goal for nonfossil energy to 15% in primary energy consumption in 2020. The connotation and interpretation of the goal, possible development scenarios, feasible implementation paths, and corresponding benefit costs are all the major issues this book explains in detail and demonstrates by models. Demonstrates how to safely, economically, and efficiently meet the Chinese government's energy development target for non-fossil energy. Analyzes energy development scenarios by using the energy demand and supply model, electricity demand forecasting model, and power system optimization planning models. Focuses on practical problems and algorithms.
