Japanese economists began publishing scientific papers in renowned journals including *Econometrica* in the 1950s and had made their significant contributions to the sophistication of general equilibrium analysis by intensive use of a variety of mathematical instruments. They had contributed significantly to the transformation of neoclassical economics. This book examines how it became possible for Japanese economists to do so by shedding light on the professional discussion of the international gold standard and parity policies in the early twentieth century, the acceptance of mathematical economics in the following period, the impact of establishment of the Econometric Society 1930 and the swift distribution of theory oriented economics journals since 1930. This book also includes topics on the historical research of the Japanese foundations of modern economics, the transformation of the economics of Keynes into Keynesian economics, Japanese developments in econometrics and Martin Bronfenbrenner's visit to Japan in the post WWII period. This book provides insight into the economic research done by Japanese scholars in the international context. It traces how during the period 1900-1960 economics was harmonized with mathematics and a standard economics was re-shaped on the basis of mathematics thanks to economists' appetite for rigor and will help to contribute to existing literature. Methodological Prospects for Scientific Research Wenceslao J. Gonzalez, 2020-10-30. This book highlights the existence of a diversity of methods in science in general in groups of sciences: natural, social or the artificial and in individual sciences. This methodological variety is open to a number of consequences such as the differences in the research according to levels of reality: micro, meso and macro, which leads to multi-scale modelling and to questioning fundamental parts in the sciences understood as the necessary support for the whole discipline. In addition, this volume acknowledges the need to assess the efficacy of procedures and methods of scientific activity in engendering high quality results in research, made the relevance of contextual factors for methodology of science, the existence of a plurality of stratagems when doing research in empirical sciences: natural, social and of the artificial and the need for an ethical component while developing scientific methods because values should have a role in scientific research. The book is of interest to a broad audience of philosophers, academics in various fields, graduate students and research centers interested in methodology of science. **The Science and Method of Politics** Sir George Edward Gordon Catlin, 1927.
