Chernick, 2011-09-27 A fundamental and straightforward guide to using and understanding statistical concepts in medical research Designed specifically for healthcare practitioners who need to understand basic biostatistics but do not have much time to spare The Essentials of Biostatistics for Physicians Nurses and Clinicians presents important statistical methods used in today's biomedical research and provides insight on their appropriate application Rather than provide detailed mathematics for each of these methods the book emphasizes what healthcare practitioners need to know to interpret and incorporate the latest biomedical research into their practices The author draws from his own experience developing and teaching biostatistics courses for physicians and nurses offering a presentation that is non technical and accessible The book begins with a basic introduction to the relationship between biostatistics and medical research asking the question why study statistics while also exploring the significance of statistical methods in medical literature and clinical trials research Subsequent chapters explore key topics including Correlation regression and logistic regression Diagnostics Estimating means and proportions Normal distribution and the central limit theorem Sampling from populations Contingency tables Meta analysis Nonparametric methods Survival analysis Throughout the book statistical methods that are often utilized in biomedical research are outlined including repeated measures analysis of variance hazard ratios contingency tables log rank tests bioequivalence cross over designs selection bias and group

Porous Media Wolfgang Ehlers, J. Bluhm, 2013-03-09 The present volume offers a state of the art report on the various recent scientific developments in the Theory of Porous Media TPM comprehending the basic theoretical concepts in continuum mechanics on porous and multiphase materials as well as the wide range of experimental and numerical applications Following this the volume does not only address the sophisticated reader but also the interested beginner in the area of Porous Media by presenting a collection of articles These articles written by experts in the field concern the fundamental approaches to multiphase and porous materials as well as various applications to engineering problems In many branches of engineering just as in applied natural sciences like bio and chemomechanics one often has to deal with continuum mechanical problems which cannot be uniquely classified within the well known disciplines of either solid mechanics or fluid mechanics These problems characterized by the fact that they require a unified treatment of volumetrically coupled solid fluid aggregates basically fall into the categories of either mixtures or porous media Following this there is a broad variety of problems ranging in this category as for example the investigation of reacting fluid mixtures or solid fluid suspensions as well as the investigation of the coupled solid deformation and pore fluid flow behaviour of liquid and gas saturated porous solid skeleton materials like geomaterials soil rock concrete etc polymeric and metallic foams or biomaterials hard and soft tissues etc

Automatic Modulation Classification Zhechen Zhu, Asoke K. Nandi, 2015-02-16 Automatic Modulation Classification AMC has been a key technology in many military security and civilian telecommunication applications for decades In military and security applications modulation often serves as another level of encryption in modern civilian applications multiple modulation types can be employed by a signal transmitter to control the data rate and link reliability This book offers comprehensive documentation of AMC models algorithms and implementations for successful modulation recognition It provides an invaluable theoretical and numerical comparison of AMC algorithms as well as guidance on state of the art classification designs with specific military and civilian applications in mind Key Features Provides an important collection of AMC algorithms in five major categories from likelihood based classifiers and distribution test based classifiers to feature based classifiers machine learning assisted classifiers and blind modulation classifiers Lists

detailed implementation for each algorithm based on a unified theoretical background and a comprehensive theoretical and numerical performance comparison Gives clear guidance for the design of specific automatic modulation classifiers for different practical applications in both civilian and military communication systems Includes a MATLAB toolbox on a companion website offering the implementation of a selection of methods discussed in the book

Bilinear Stochastic Models and Related Problems of Nonlinear Time Series Analysis György Terdik, 2012-12-06 Ninety percent of inspiration is perspiration 31 The Wiener approach to nonlinear stochastic systems 146 permits the representation of single valued systems with memory for which a small perturbation of the input produces a small perturbation of the output The Wiener functional series representation contains many transfer functions to describe entirely the input output connections Although theoretically these representations are elegant in practice it is not feasible to estimate all the finite order transfer functions or the kernels from a finite sample One of the most important classes of stochastic systems especially from a statistical point of view is the case when all the transfer

functions are determined by finitely many parameters Therefore one has to seek a finite parameter nonlinear model which can adequately represent non linearity in a series Among the special classes of nonlinear models that have been studied are the bilinear processes which have found applications both in econometrics and control theory see for example Granger and Andersen 43 and Ruberti et al 4 These bilinear processes are defined to be linear in both input and output only when either the input or output are fixed The bilinear model was introduced by Granger and Andersen 43 and Subba Rao 118 119 Terdik 126 gave the solution of xii a lower triangular bilinear model in terms of multiple Wiener It integrals and gave a sufficient condition for the second order stationarity An important

Causal Models in the Social Sciences H.M. Blalock Jr., 2017-07-28 Causal models are formal theories stating the relationships between precisely defined variables and have become an indispensable tool of the social scientist This collection of articles is a course book on the causal modeling approach to theory construction and data analysis H M Blalock Jr summarizes the then current developments in causal model utilization in sociology political science economics and other disciplines This book provides a comprehensive multidisciplinary picture of the work on causal models It seeks to address the problem of measurement in the social sciences and to link theory and research through the development of causal models Organized into five sections Simple Recursive Models Path Analysis Simultaneous Equations Techniques The Causal Approach to Measurement Error and Other Complications this volume contains twenty seven articles eight of which were specially commissioned Each section begins with an introduction explaining the concepts to be covered in the section and links them to the larger subject It provides a general overview of the theory and application of causal modeling Blalock argues for the development of theoretical models that can be operationalized and provide verifiable predictions Many of the discussions of this subject that occur in other literature are too technical for most social scientists and other scholars who lack a strong background in mathematics This book attempts to integrate a few of the less technical papers written by econometricians such as Koopmans Wold Strotz and Fisher with discussions of causal approaches in the social and biological sciences This classic text by Blalock is a valuable source of material for those interested in the issue of measurement in the social sciences and the construction of mathematical models
