## **Hard Tissue Mineralization And Demineralization:**

**Hard Tissue Mineralization and Demineralization** Shoichi Suga, Norimitsu Watabe, 2012-12-06 Comparative investigations of mineralization and demineralization mechanisms by leading researchers give a general perspective on this interdisciplinary field of the life sciences and an introduction to current research methods and concepts The studies are concentrated in the areas of calcium phosphate mineral formation in vertebrate bone and teeth and calcium carbonate mineral formation in coral skeletons and molluscan shells *Hard Tissue Mineralization and Demineralization* Shoichi Suga, Norimitsu Watabe, 1992-10-01 Comparative investigations of mineralization and demineralization mechanisms by leading researchers give a general perspective on this interdisciplinary field of the life sciences and an introduction to current research methods and concepts The studies are concentrated in the areas of calcium phosphate mineral formation in vertebrate bone and teeth and calcium carbonate mineral formation in coral skeletons and molluscan shells **Hard Tissue Growth, Repair and Remineralization** Katherine Elliott, David W. FitzSimons, 2009-09-16 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world **Nature's Nanostructures** Amanda S. Barnard, Haibo Guo, 2012-02-02 Natural nanomaterials and nanotechnologies are all around us which inevitably leads to these questions What are these natural nanomaterials made of Where can we find them What can they do Answering these questions will facilitate new and environmentally friendly ways of creating and manipulating nanoscale materials for the next generation of n *Biological Calcification: Cellular and Molecular Aspects* Harald Schraer, 2012-12-06 The deposition of calcium containing salts is a widespread phenomenon in both the plant and animal kingdoms Its occurrence suggests a generalized biological adaptation to environments rich in calcium Indeed the Archaean ocean was rich in calcium carbonate and traces of ancient organisms have been found in lime stones estimated to be about 2 7 billion years old The fundamental nature of biological calcification makes it a subject of interest not only to the student of calcium metabolism and skeletal physiology but also to biologists in general As in many areas of biological science recent progress in this field has been rapid and no attempt was made here to cover all the biological systems in which calcification is an important facet of the organisms method of operation Calcification is approached in this volume at the levels of the cellular sites and molecular mechanisms that are involved in this process The ultrastructural and chemical features of the cells and their products which are associated with calcification are emphasized in several chapters The editor in inviting contributions from authors intended that collectively the chapters should convey a sense of the ubiquitous and essential nature of the role of calcification in several phyla of the plant and animal kingdoms The researchers were biochemists physical chemists cell biologists and physiologists some represented medicine and dentistry all were interested in

calcification      *Nanotechnology in Conservative Dentistry* Mona Ismail Riad, Shereen Hafez Ibrahim, 2021-07-24

Nanotechnology in Conservative Dentistry provides a detailed review of the use of nanotechnology in conservative dentistry from diagnosis and restorative materials through to tissue engineering and regeneration. This book covers fundamental topics in the field of conservative dentistry including caries therapy, dentin reconstruction, pulp protection, and more. Each chapter reviews and discusses how nanotechnology can be implemented as a novel approach to traditional conservative dentistry techniques, exploring the many uses and advantages of this fast-growing technology. Various nanobiomaterials and technologies are covered, as well as assessment of the biocompatibility and toxicological risks of utilizing nanotechnology in dentistry. *Nanotechnology in Conservative Dentistry* will help dentists and materials science academics alike understand the potential of nanotechnology in dentistry, building on and going beyond traditional concepts and techniques in this field. Reviews key topics in conservative dentistry including dentin reconstruction, enamel synthesis, detection of microcavities, and more. Covers a range of nanobiomaterials and nanotechnologies, as well as health and safety aspects of using these in dentistry. Appeals to a wide readership including dentists, dental surgeons, academics, and students, materials scientists, and biomedical engineers with an interest in nanotechnology and dentistry.      Textbook of Biochemistry for Dental Students DM

Vasudevan, Sreekumari S, Kannan Vaidyanathan, 2017-12-31. The third edition of this textbook has been fully revised to provide dental students with the latest information in the field of biochemistry. The comprehensive text is divided into 31 chapters and covers key aspects of biochemistry that students will need to know for examinations, including amino acids, carbohydrates, lipids, metabolism, acid-base balance, dental caries, and much more. The new edition features a question bank of essay type and short note questions based on previous examination papers. The book is highly illustrated with clinical images, tables, and boxes, and key points in each chapter are highlighted for quick reference and to assist learning. Key points. Fully revised third edition providing dental students with latest information in the field of biochemistry. Features question bank of essay type and short note practice questions. Highlights key learning points for each topic. Previous edition 9789350254882 published in 2011.      **Enamel and Dentin-Pulp Complex**, 2024-07-17. Dental caries are a global health issue affecting all

populations. As their progression is influenced by a multitude of factors, a deep insight into sound and affected tooth structures enables proper diagnosis and treatment. This book includes seven chapters that focus on various important aspects of the etiopathogenesis and prevention of dental caries, developmental anomalies of enamel and dentin, enamel structure and remineralization, and dentin pulp regeneration.      **Human Tooth and Developmental Dental Defects** Ana Gil De

Bona, Hakan Karaaslan, 2022-07-27. The unique tissues of human teeth, enamel and dentin, have been studied by scientists to understand their structure, physical and chemical properties, and the developmental machinery behind these extraordinary properties. During the developmental process, genetic and environmental factors or the interplay between them may cause defects in dental hard tissues, impairing their biology and function. These defects have long been studied to provide better

dental care and to find novel treatment options Understanding the mechanical chemical and structural differences in developmental dental defects is also crucial for a routine dental practice as many of these lesions do not have pathognomonic properties This book focuses on the qualitative and quantitative properties of the sound enamel and dentin as well as the affected human tooth structures It examines how genetics impact oral and dental health the role of fluoride and trace elements in mineralization and the related clinical implications and the impact of different approaches to diagnose and treat these developmental disorders

*Dental Composite Materials for Direct Restorations* Vesna Miletic, 2017-11-25 This book covers both basic scientific and clinically relevant aspects of dental composite materials with a view to meeting the needs of researchers and practitioners Following an introduction on their development the composition of contemporary composites is analyzed A chapter on polymerization explains the setting reactions and light sources available for light cured composites The quality of monomer to polymer conversion is a key factor for material properties Polymerization shrinkage along with the associated stress remains among the most challenging issues regarding composite restorations A new classification of dental composites is proposed to offer more clinically relevant ways of differentiating between commercially available materials A review of specific types of composites provides an insight into their key issues The potential biological issues of dental composites are reviewed in chapters on elution of leachable substances and cariogenicity of resin monomers Clinical sections focus on material placement finishing procedures and the esthetics and clinical longevity of composite restorations Bonding to tooth tissues is addressed in a separate chapter as is the efficiency of various composite repair methods The final chapter discusses future perspectives on dental composite materials

*International Review of Cytology* Kwang W. Jeon, 2005-01-25 International Review of Cytology presents current advances and comprehensive reviews in cell biology both plant and animal Authored by some of the foremost scientists in the field each volume provides up to date information and directions for future research Articles in this volume address the pathophysiological dynamics of human ovarian surface epithelial cells in epithelial ovarian carcinogenesis morphodynamics of the secretory pathway aspects of collagen mineralization in hard tissue formation the hypoxia inducible factor and tumor progression along the angiogenic pathway multidrug resistance in yeast candida intracellular coupling of interstitial cells of cajal in the digestive tract and chromatin organization in the mammalian nucleus

**7th International Conference on Nanotechnologies and Biomedical Engineering** Victor Sontea, Ion Tiginyanu, Serghei Railean, 2025-10-25 This book reports on advances in fundamental and applied research at the interface between biomedical research data science molecular diagnostics and material engineering Gathering peer reviewed contributions to the 7th International Conference on Nanotechnologies and Biomedical Engineering ICNBME 2025 held on October 7 10 2025 in Chisinau Republic of Moldova this second volume of the proceedings focuses on technologies for medical imaging tissue engineering therapeutic and rehabilitation devices and diagnostic tools An emphasis is given to

applications in personalized medicine disease prevention and patient care Key topics include genetic and biomarker based diagnostics predictive modeling of disease progression and computational simulations of biological systems Further this book covers applications of artificial intelligence in healthcare with a focus on data security patient stratification and decision support systems Novel biomaterials for tissues engineering technologies for non invasive monitoring and mobile health solutions are also discussed throughout the book With a good balance of theory and practice this book offers extensive and timely information for students and specialists in biomedical engineering clinical research health informatics and medical technologies

*Root Caries: From Prevalence to Therapy* M. Rocha de Olivera Carrilho, 2017-10-19 Case reports and clinical trials conducted in various countries show more and more frequently a positive correlation between the presence of original teeth and prevalence of root caries in older age Because this is a global trend it is likely that the predicted increase in the worldwide elderly population may soon cause a significant increase in the number of people requiring effective means of preventing and treating root surface caries In response to this development a team of outstanding contributors has reviewed the most important aspects of root caries This new volume presents their findings along with discussions of how to deal with this health issue that progressively affects the oral health balance The chapters in this book are divided in four core parts Epidemiology Biological Determinants Lesion Assessment and Features and Preventive and Operative Therapies The collection of state of the art articles provides a broad overview and will serve as a reference for clinicians as well as scientists and hopefully will encourage new research
