HARMONIC ANALYSIS ON COMPACT POLAR HOMOGENEOUS SPACES

Jing-Song Huang

In this paper we are concerned with the existence of discrete series for semisimple homogeneous spaces. This leads to the definition of polar homogeneous spaces. We first study the harmonic analysis on compact polar homogeneous spaces. The proof of the existence of disrete series and the Plancherel formula for non-compact and non-symmetric polar homogeneous spaces will be given in a consequent paper.

1. Introduction.

One of the greatest achievements of mathematics in twentieth century is Harish-Chandra's work on discrete series for semisimple Lie groups. Suppose G is a semisimple Lie group with a maximal compact Lie group K. Harish-Chandra proved that G has discrete series if and only if the real rank of G is equal to the rank of K ([**HC**]). In other words, G has discrete series if and only if G has a compact Cartan subgroup. Harish-Chandra also obtained a classification of the discrete series for semisimple Lie groups. Harish-Chandra's results on discrete series have been generalized to semisimple symmetric spaces. Flensted-Jensen ([**FJ**]) proved that a semisimple symmetric space G/H has discrete series if

(1.1)   rank of $G/H = $ rank of $K/K \cap H$.

Later on Oshima and Matsuki ([**OM**]) proved if G/H has discrete series then it must satisfy the rank condition (1.1). That is to say, the semisimple symmetric space G/H has discrete series if and only if it has a compact Cartan subspace. Othima and Matsuki also gave a description of all discrete series for semisimple symmetric spaces. Since the group G can be regarded as symmetric space $G \times G/\mathrm{d}(G)$, the results of Flensted-Jensen, Othima and Matsuki are the generalizations of Harish-Chandra's work.

If G is a semisimple Lie group and H a closed reductive subgroup, it is very natural to ask the following question: when does the semisimple homogeneous space G/H has discrete series? Based on the observation of the results mentioned above, we would guess G/H has discrete series if

Harmonic Analysis on Homogeneous Spaces Nolan R. Wallach,2018-12-12 This book is suitable for advanced undergraduate and graduate students in mathematics with a strong background in linear algebra and advanced calculus Early chapters develop representation theory of compact Lie groups with applications to topology geometry and analysis including the Peter Weyl theorem the theorem of the highest weight the character theory invariant differential operators on homogeneous vector bundles and Bott s index theorem for such operators Later chapters study the structure of representation theory and analysis of non compact semi simple Lie groups including the principal series intertwining operators asymptotics of matrix coefficients and an important special case of the Plancherel theorem Teachers will find this volume useful as either a main text or a supplement to standard one year courses in Lie groups and Lie algebras The treatment advances from fairly simple topics to more complex subjects and exercises appear at the end of each chapter Eight helpful Appendixes develop aspects of differential geometry Lie theory and functional analysis employed in the main text

They are doubly periodic functions of a complex variable This periodicity has led to consideration of the lattice of periods and to linear fractional trans formations of the complex plane which leave this lattice invariant The group of these transformations is isomorphic to the quotient group of the group 8L 2 Z of unimodular matrices of the second order with integral elements with respect to its center Investigation of properties of elliptic functions led to the study of automorphic functions and forms This gave the first connec tion between the theory of groups and this important class of functions The further development of the theory of automorphic functions was related to geometric concepts connected with the fact that the group of linear fractional transformations with real elements can be realized as the group of motions of th the Lobachevskij plane We also note that at the beginning of the 19 century Gauss used the group 8L 2 Z in his papers on the theory of indeterminate quadratic forms **Geometric and Harmonic Analysis on Homogeneous Spaces** Ali Baklouti,Takaaki Nomura,2019-08-31 This book presents a number of important contributions focusing on harmonic analysis and representation theory of Lie groups All were originally presented at the 5th Tunisian Japanese conference Geometric and Harmonic Analysis on Homogeneous Spaces and Applications which was held at Mahdia in Tunisia from 17 to 21 December 2017 and was dedicated to the memory of the brilliant Tunisian mathematician Majdi Ben Halima The peer reviewed contributions selected for publication have been modified and are without exception of a standard equivalent to that in leading mathematical periodicals Highlighting the close links between group representation theory and harmonic analysis on homogeneous spaces and numerous mathematical areas such as number theory algebraic geometry differential geometry operator algebra partial differential equations and mathematical physics the book is intended for researchers and students working in the area of commutative and non commutative harmonic analysis as well as group representations **Geometric and Harmonic Analysis on Homogeneous Spaces and Application** ,2015 Harmonic Analysis on Homogeneous Spaces Proceedings of the Symposium in Pure Mathematics, Williams College, 1972 Pure Mathemat American Mathematical Society,1973 **Groups & Geometric Analysis** ,1984-06-30 Groups Geometric Analysis
