Harmonic Analysis For Anisotropic Random Walks On Homogeneous Trees:

Harmonic Analysis for Anisotropic Random Walks on Homogeneous Trees Alessandro Figà-Talamanca, Tim Steger, 1994 *Harmonic Analysis for Anisotropic Random Walks on Homogeneous Trees* Alessandro Figà-Talamanca, Tim Steger, 1994 This work presents a detailed study of the anisotropic series representations of the free product group $Z \amalg Z \amalg Z \amalg Z$. These representations are infinite dimensional irreducible and unitary and can be divided into principal and complementary series. Anisotropic series representations are interesting because while they are not restricted from any larger continuous group in which the discrete group is a lattice they nonetheless share many properties of such restrictions. The results of this work are also valid for nonabelian free groups on finitely many generators. [Harmonic Analysis for an Anisotropic Random Walk on a Homogeneous Tree](#) Tim Steger, 1985 *Random Walks on Infinite Graphs and Groups* Wolfgang Woess, 2000-02-13 The main theme of this book is the interplay between the behaviour of a class of stochastic processes random walks and discrete structure theory. The author considers Markov chains whose state space is equipped with the structure of an infinite locally finite graph or as a particular case of a finitely generated group. The transition probabilities are assumed to be adapted to the underlying structure in some way that must be specified precisely in each case. From the probabilistic viewpoint the question is what impact the particular type of structure has on various aspects of the behaviour of the random walk. Vice versa random walks may also be seen as useful tools for classifying or at least describing the structure of graphs and groups. Links with spectral theory and discrete potential theory are also discussed. This book will be essential reading for all researchers working in stochastic process and related topics. [Harmonic Analysis and Discrete Potential Theory](#) M.A. Picardello, 2013-11-11 This book collects the Proceedings of a Congress held in Frascati Rome in the period July 1-10 1991 on the subject of harmonic analysis and discrete potential theory and related topics. The Congress was made possible by the financial support of the Italian National Research Council Gruppo GNAFA the Ministry of University Gruppo Analisi Funzionale of the University of Milano the University of Rome Tor Vergata and was also patronized by the Centro Vito Volterra of the University of Rome Tor Vergata. Financial support for publishing these Proceedings was provided by the University of Rome Tor Vergata and by a generous contribution of the Centro Vito Volterra.
