Harmonic Functions On Groups And Fourier Algebras:

Harmonic Functions on Groups and Fourier Algebras Cho-Ho Chu, Anthony To-Ming Lau, 2004-10-11 This research monograph introduces some new aspects to the theory of harmonic functions and related topics The authors study the analytic algebraic structures of the space of bounded harmonic functions on locally compact groups and its non commutative analogue the space of harmonic functionals on Fourier algebras Both spaces are shown to be the range of a contractive projection on a von Neumann algebra and therefore admit Jordan algebraic structures This provides a natural setting to apply recent results from non associative analysis semigroups and Fourier algebras Topics discussed include Poisson representations Poisson spaces quotients of Fourier algebras and the Murray von Neumann classification of harmonic functionals

Banach Algebras and Their Applications Anthony To-Ming Lau, Volker Runde, 2004 This proceedings volume is from the international conference on Banach Algebras and Their Applications held at the University of Alberta Edmonton It contains a collection of refereed research papers and high level expository articles that offer a panorama of Banach algebra theory and its manifold applications Topics in the book range from theory to abstract harmonic analysis to operator theory It is suitable for graduate students and researchers interested in Banach algebras

Matrix Convolution Operators on Groups Cho-Ho Chu, 2008-08-15 In the last decade convolution operators of matrix functions have received unusual attention due to their diverse applications This monograph presents some new developments in the spectral theory of these operators The setting is the L_p spaces of matrix valued functions on locally compact groups The focus is on the spectra and eigenspaces of convolution operators on these spaces defined by matrix valued measures Among various spectral results the L_2 spectrum of such an operator is completely determined and as an application the spectrum of a discrete Laplacian on a homogeneous graph is computed using this result The contractivity properties of matrix convolution semigroups are studied and applications to harmonic functions on Lie groups and Riemannian symmetric spaces are discussed An interesting feature is the presence of Jordan algebraic structures in matrix harmonic functions

Mixed Finite Elements, Compatibility Conditions, and Applications Daniele Boffi, Franco Brezzi, Leszek F. Demkowicz, Ricardo G. Durán, Richard S. Falk, Michel Fortin, 2008-04-01 Since the early 70 s mixed finite elements have been the object of a wide and deep study by the mathematical and engineering communities The fundamental role of this method for many application fields has been worldwide recognized and its use has been introduced in several commercial codes An important feature of mixed finite elements is the interplay between theory and application Discretization spaces for mixed schemes require suitable compatibilities so that simple minded approximations generally do not work and the design of appropriate stabilizations gives rise to challenging mathematical problems This volume collects the lecture notes of a C I M E course held in Summer 2006 when some of the most world recognized experts in the field reviewed the rigorous setting of mixed finite elements and

revisited it after more than 30 years of practice Applications in this volume range from traditional ones like fluid dynamics or elasticity to more recent and active fields like electromagnetism Axiom of Choice Horst Herrlich, 2006-07-21 AC the axiom of choice because of its non constructive character is the most controversial mathematical axiom It is shunned by some used indiscriminately by others This treatise shows paradigmatically that disasters happen without AC and they happen with AC Illuminating examples are drawn from diverse areas of mathematics particularly from general topology but also from algebra order theory elementary analysis measure theory game theory and graph theory **Random Times and**

Enlargements of Filtrations in a Brownian Setting Roger Mansuy, Marc Yor, 2006-02-10 In November 2004 M Yor and R Mansuy jointly gave six lectures at Columbia University New York These notes follow the contents of that course covering expansion of filtration formulae BDG inequalities up to any random time martingales that vanish on the zero set of Brownian motion the Azma Emery martingales and chaos representation the filtration of truncated Brownian motion attempts to characterize the Brownian filtration The book accordingly sets out to acquaint its readers with the theory and main examples of enlargements of filtrations of either the initial or the progressive kind It is accessible to researchers and graduate students working in stochastic calculus and excursion theory and more broadly to mathematicians acquainted with the basics of Brownian motion **Lectures on Probability Theory and Statistics** Amir Dembo, Tadahisa Funaki, 2005-11-03 This

volume contains two of the three lectures that were given at the 33rd Probability Summer School in Saint Flour July 6 23 2003 Amir Dembo's course is devoted to recent studies of the fractal nature of random sets focusing on some fine properties of the sample path of random walk and Brownian motion In particular the cover time for Markov chains the dimension of discrete limsup random fractals the multi scale truncated second moment and the Ciesielski Taylor identities are explored Tadahisa Funaki's course reviews recent developments of the mathematical theory on stochastic interface models mostly on the so called nabla varphi interface model The results are formulated as classical limit theorems in probability theory and the text serves with good applications of basic probability techniques *Quantum Independent Increment Processes II* Ole E.

Barndorff-Nielsen, 2006 Lectures given at the school Quantum Independent Increment Processes Structure and Applications to Physics held at the Alfried Krupp Wissenschaftskolleg in Greifswald in March 9 22 2003 **Combinatorial Stochastic**

Processes Jim Pitman, 2006-05-11 The purpose of this text is to bring graduate students specializing in probability theory to current research topics at the interface of combinatorics and stochastic processes There is particular focus on the theory of random combinatorial structures such as partitions permutations trees forests and mappings and connections between the asymptotic theory of enumeration of such structures and the theory of stochastic processes like Brownian motion and Poisson processes Mathematical Foundation of Turbulent Viscous Flows P. Constantin, Giovanni Gallavotti, Alexandre V.

Kazhikhov, Yves Meyer, Seiji Ukai, 2006-01-10 Constantin presents the Euler equations of ideal incompressible fluids and the blow up problem for the Navier Stokes equations of viscous fluids describing major mathematical questions of turbulence

theory These are connected to the Caffarelli Kohn Nirenberg theory of singularities for the incompressible Navier Stokes equations explained in Gallavotti s lectures Kazhikhov introduces the theory of strong approximation of weak limits via the method of averaging applied to Navier Stokes equations Y Meyer focuses on nonlinear evolution equations and related unexpected cancellation properties either imposed on the initial condition or satisfied by the solution itself localized in space or in time variable Ukai discusses the asymptotic analysis theory of fluid equations the Cauchy Kovalevskaya technique for the Boltzmann Grad limit of the Newtonian equation the multi scale analysis giving compressible and incompressible limits of the Boltzmann equation and the analysis of their initial layers

Singular Coverings of Toposes Marta Bunge,Jonathon Funk,2007-01-19 This volume presents a self contained theory of certain singular coverings of toposes including branched coverings This book is distinguished from classical treatments of the subject by its unexpected connection with a topic from functional analysis namely distributions Although primarily aimed at topos theorists this book may also be used as a textbook for advanced graduate courses introducing topos theory with an emphasis on geometric applications

Enumerative Invariants in Algebraic Geometry and String Theory Marcos Marino,Michael Thaddeus,Ravi Vakil,2008-08-15 Starting in the middle of the 80s there has been a growing and fruitful interaction between algebraic geometry and certain areas of theoretical high energy physics especially the various versions of string theory Physical heuristics have provided inspiration for new mathematical definitions such as that of Gromov Witten invariants leading in turn to the solution of problems in enumerative geometry Conversely the availability of mathematically rigorous definitions and theorems has benefited the physics research by providing the required evidence in fields where experimental testing seems problematic The aim of this volume a result of the CIME Summer School held in Cetraro Italy in 2005 is to cover part of the most recent and interesting findings in this subject

C^∞ - Differentiable Spaces Juan A. Navarro González,Juan B. Sancho de Salas,2003-10-29 The volume develops the foundations of differential geometry so as to include finite dimensional spaces with singularities and nilpotent functions at the same level as is standard in the elementary theory of schemes and analytic spaces The theory of differentiable spaces is developed to the point of providing a handy tool including arbitrary base changes hence fibred products intersections and fibres of morphisms infinitesimal neighbourhoods sheaves of relative differentials quotients by actions of compact Lie groups and a theory of sheaves of Frchet modules paralleling the useful theory of quasi coherent sheaves on schemes These notes fit naturally in the theory of C^∞ rings and C^∞ schemes as well as in the framework of Spallek s C^∞ standard differentiable spaces and they require a certain familiarity with commutative algebra sheaf theory rings of differentiable functions and Frchet spaces

Quantum Transport Gregoire Allaire,Anton Arnold,Pierre Degond,Thomas Y. Hou,2008-08-13 In this volume a result of The CIME Summer School held in Cetraro Italy in 2006 four leading specialists present different aspects of quantum transport modeling It provides an excellent basis for researchers in this field

Forward-Backward Stochastic Differential Equations and their

Applications Jin Ma, Jiongmin Yong, 2007-04-24 This volume is a survey monograph on the recently developed theory of forward backward stochastic differential equations FBSDEs Basic techniques such as the method of optimal control the Four Step Scheme and the method of continuation are presented in full Related topics such as backward stochastic PDEs and many applications of FBSDEs are also discussed in detail The volume is suitable for readers with basic knowledge of stochastic differential equations and some exposure to the stochastic control theory and PDEs It can be used for researchers and or senior graduate students in the areas of probability control theory mathematical finance and other related fields

Asymptotics for Dissipative Nonlinear Equations Nakao Hayashi, 2006-04-21 Many of problems of the natural sciences lead to nonlinear partial differential equations However only a few of them have succeeded in being solved explicitly Therefore different methods of qualitative analysis such as the asymptotic methods play a very important role This is the first book in the world literature giving a systematic development of a general asymptotic theory for nonlinear partial differential equations with dissipation Many typical well known equations are considered as examples such as nonlinear heat equation KdVB equation nonlinear damped wave equation Landau Ginzburg equation Sobolev type equations systems of equations of Boussinesq Navier Stokes and others The Lace Expansion and its Applications Gordon Slade, 2006-05-17 The lace expansion is a powerful and flexible method for understanding the critical scaling of several models of interest in probability statistical mechanics and combinatorics above their upper critical dimensions These models include the self avoiding walk lattice trees and lattice animals percolation oriented percolation and the contact process This volume provides a unified and extensive overview of the lace expansion and its applications to these models *Noncommutative Stationary Processes* Rolf Gohm, 2004 **Mathematical Theory of Nonequilibrium Steady States** Da-Quan Jiang, Donghua Jiang, 2004
