Ecology And Human Adaptation Anthropology Series:

The Ecological Transition John W. Bennett, 2017-09-29 Written during the height of the ecology movement *The Ecological Transition* is a stunning interdisciplinary work It combines anthropology ecology and sociology to formulate an understanding of cultural environmental relationships While anthropologists have been studying relationships between humans and the physical environment for a very long time only in the last thirty years have questions inherent in these relationships broadened beyond description and classification For example the concept of environment has been extended beyond the physical into the social Although anthropologists have adopted many of the concepts that Bennett develops in the book he also feels that the central issues have never been addressed either by anthropologists or by people in related disciplines The most important of these in Bennett's opinion is the failure to incorporate a respect for the environmental in contemporary culture which would allow making exceptions in certain human practices in order to protect the environment His point in *The Ecological Transition* is that a basic cultural change in modern civilization is necessary to achieve this end Both a theoretical and a practical work *The Ecological Transition* emphasizes the relationships between human culture the physical environment technology and social policy *The Ecological Transition* is a challenging volume that makes us face the consequences of human behavior in the modern world its effect on pollution natural resources agriculture the economy and population to name just a few areas The book remains a significant contribution to the discourse on social economic and environmental problems While the book was first published in 1976 it still reads as a contemporary tract

The Ecological Transition John William Bennett, 1976-01-01 *Ecology and Human Adaptation* William A. Stini, 1975 **Hunters and Gatherers (Vol I)** Tim Ingold, David Riches, James Woodburn, 2024-11-01 All that is central to the dynamic process in human society is evident in the study of hunter gatherers peoples whose subsistence way of life reflects the original form of human adaptation This is the thesis of these wide ranging volumes in which internationally leading scholars consider hunter gatherer peoples in Africa Asia Australia and North America and reflect theoretically on the hunter gatherer condition Volume I *Hunters and Gatherers History Evolution and Social Change* Volume II *Hunters and Gatherers Property Power and Ideology*

An Invitation to Anthropology Josep R. Llobera, 2003 Josep Llobera offers an original approach to anthropology through integrating knowledge produced from a wide variety of perspectives The volume introduces the topic to students of social and cultural anthropology Late Quaternary Environments of the United States Herbert Edgar Wright, Stephen C. Porter, 1983 **Stone Age Prehistory** G. N. Bailey, P. Callow, 1986-06-12 Articles by John Clegg and Isabel McBryde annotated separately *The Subarctic Fur Trade* Shepard Krech III, 2011-11-01 Originally presented at the American Society for Ethnohistory conference in 1981 the papers in this book focus on themes which have been near the centre of fur trade scholarship the identification of Indian motivations the degree to which Indians were discriminating consumers and creative participants and the extent of Native dependency on the trade It spans the period from the

seventeenth century up to and including the twentieth century In one of the key essays Arthur J Ray questions the theory that modern Native welfare societies are of recent origin and traces their roots to the early fur trade In developing his thesis his concerns about resource depletions and other ecological changes the advent of new mercantilistic impulses and the development of dependence also emerge as sources of inquiry by the other authors Papers by Charles A Bishop Toby Morantz and Carol M Judd focus on the North Algonquians in the eastern subarctic and earlier centuries of the trade while two final essays by Shepard Krech and Robert Jarvenpa and Hetty Jo Brumbach shift the focus to the North Athapascans in the western subarctic The Subarctic Fur Trade will help scholars become more fully aware of the issues concerned with Native economic history which are of common interest to scholars from many different disciplines It also illustrates the methods that are increasingly being used to arrive at empirically based answers to questions and which will when further refined lead to greater advances in fur trade scholarship

The Ecological Transition John W. Bennett, 2016-06-06 The Ecological Transition studies the relationships between humans and the physical environment It also assesses some converging approaches in cultural anthropology including cultural ecology economic anthropology social exchange and behavioral adaptation Comprised of ten chapters this book focuses on ecological transition which refers to the process by which humans incorporate nature into society It discusses how to formulate a policy oriented cultural ecology and looks at the ecological transition as material evolution and as a problem of equilibrium The succeeding chapters review some of the contributions of cultural ecology including its successes and failures Finally the book examines the concept of adaptive and maladaptive actions in human ecology This book is useful for anthropologists who are interested in cultural ecological research and its implications in public policy

Human trusteeship of the planet: Escalating the environmental movement to the next level Sujay Rao Mandavilli, 2024-11-22 The term Homo sapiens is the scientific nomenclature for the anatomically modern man This term literally means thinking man Modern humans are found all over the world in different regions and are probably the most successful species in modern times just like the dinosaurs were some one hundred million years ago Homo Sapiens are the most common and widespread species of primate or great apes and the last surviving species of the genus Homo all others have either become extinct or have lost their distinct identity The term Humans is also most often used only to Homo Sapiens and not to all other species in the genus homo which are sometimes referred to as archaic humans Humans also possess a high level of intelligence and a great deal of cognitive ability and cognitive skills due to a large prefrontal cortex and this feature attribute and characteristic besides other features such as bipedalism and opposing thumbs have distinguished and differentiated it from other species These aspects have also allowed humans to dominate the earth and build impressive civilizations that have immense technological clout Humans are also a polytypic species there are wide variations among humans inhabiting different parts of the globe even though the traditional and orthodox classification of humans into races may be highly obsolete and may even be associated with unwanted and unintended consequences both

direct and indirect However variations between humans is much less than in other species such as dogs and any two humans are at least 99.5% genetically similar Humans are also highly social creatures and tend to form either small or large social and cultural units that are known for their social and cultural bonding These may be either large or small and in the words of CH Cooley be primary or secondary groups that promote well feeling and outward feeling and help humans bond Cooley 1909

Since the Time of the Transformers Alan D. McMillan, 2000-02-01 This book examines over 4000 years of culture history of the related Nuuchah-nulth Ditidaht and Makah peoples on western Vancouver Island and the Olympic Peninsula Using data from the Toquaht Archaeological Project McMillan challenges current ethnographic interpretations that show little or no change in these peoples culture Instead by combining historical evidence recent archaeological data and oral traditions he demonstrates conclusively that there were in fact extensive cultural changes and restructuring in these societies in the century following contact with Europeans McMillan brings the reader up to modern times identifying the major issues that face the Nuuchah-nulth Ditidaht and Makah communities today

Human Adaptation Howard Morphy, G. A. Harrison, 2020-12-22 This book examines the concept of adaptation in four major fields in the human sciences Genetic aspects are first considered through an examination of the human genes which have so far been identified as conferring survival value in particular environmental circumstances The drift versus selection argument is also fully reviewed The second contribution concerns the physiological changes which occur when individuals move from one environment to another In the past most attention has been given to the mechanisms of these changes but here the focus is on the effects The third contribution is directed at the analysis of behaviour especially social behaviour The application of kin selection and reciprocal attraction theories to humans is explored and the value of these approaches explained whether the behaviour has a genetic basis or not The final essay deals with the relevance of the adaptation concept to the social sciences and especially to social anthropology It demonstrates that an ecological approach to understanding the nature and structure of human societies demands attention to adaptation Reprinted in paperback for the first time and with a new foreword this book which serves as an excellent teaching text clearly shows how attempts at integration in each of these

various fields can benefit the study of human evolution social structure and organization from all perspectives

Human Adaptive Strategies Daniel Bates, Judith Tucker, Ludomir Lozny, 2023-05-31 This book introduces students to cultural anthropology with an emphasis on environmental and evolutionary approaches focusing on how humans adapt to their environment and how the environment shapes culture It shows how cultures evolve within the context of people's strategies for surviving and thriving in their environments This approach is widely used among scholars as a cross disciplinary tool that rewards students with valuable insights into contemporary developments Drawing on anthropological case studies the authors address immediate human concerns such as the costs and consequences of human energy requirements environmental change and degradation population pressure social and economic equity and planned and unplanned change Impacts of increasingly rapid climatic change on equitable access to resources and issues of human rights are discussed throughout Towards the end of the book the student is drawn into a challenging thought experiment addressing the possible impacts of climatic warming on Middle America in the year 2040 All chapters conclude with Summary Key Terms and Suggested Readings This book is an ideal text for students of introductory anthropology and archaeology environmental studies world history and human and cultural ecology courses

21st Century Anthropology: A Reference Handbook H. James Birx, 2010-06-10 Highlighting the most important topics issues questions and debates these two volumes offer full coverage of major subthemes and subfields within the discipline of anthropology

Boreal Forest Adaptations A. Theodore Steegman, 2013-06-29 The chapters making up this volume are not just a collection of parts which were more or less on the same topic and happened to be available for cobbling together Instead they were written especially for it We had before us from the beginning the goal of creating a synthesis of interest to students of environmental adaptation but adaptation broadly construed and to one of the world's difficult environments the boreal forest This is anthropology but not anthropology of the old school A word of explanation may be in order Ecologists and those in traditional biological sciences may find some of what follows to be familiar in format and in intellectual approach Others of our perspectives may feel less comfortable and in fact may seem to be refugees from scholarship more of the sort pursued by historians All that is quite true and rather nicely reflects the dualities and potential of anthropology as a discipline We have always drawn strength from the arts as well as the sciences We have more recently tried to identify biological templates for human behavior and to understand the reciprocal impact of behavior on the human organism Anthropology is a discipline part art and part science which is at once historical behavioral societal and biological No species has left a clearer path through time than has ours and none has made its way through such a diversity of challenging environments Determining how humanity has managed to do that is our goal
