**Essays in Panel Data**

**Econometrics** Marc Nerlove, 2005-11-10 This volume collects seven of Marc Nerlove's previously published classic essays on panel data econometrics written over the past thirty five years together with a cogent essay on the history of the subject which began with George Biddell Airey's monograph published in 1861 Since Professor Nerlove's 1966 *Econometrica* paper

with Pietro Balestra panel data and methods of econometric analysis appropriate to such data have become increasingly important in the discipline. The principal factors in the research environment affecting the future course of panel data econometrics are the phenomenal growth in the computational power available to the individual researcher at his or her desktop and the ready availability of data sets both large and small via the Internet. The best way to formulate statistical models for inference is motivated and shaped by substantive problems and understanding of the processes generating the data at hand to resolve them. The essays illustrate both the role of the substantive context in shaping appropriate methods of inference and the increasing importance of computer intensive methods.

**Econometric Analysis of Cross Section and Panel Data, second edition** Jeffrey M. Wooldridge, 2010-10-01. The second edition of a comprehensive state of the art graduate level text on microeconomic methods substantially revised and updated. The second edition of this acclaimed graduate text provides a unified treatment of two methods used in contemporary econometric research: cross section and data panel methods. By focusing on assumptions that can be given behavioral content, the book maintains an appropriate level of rigor while emphasizing intuitive thinking. The analysis covers both linear and nonlinear models including models with dynamics and/or individual heterogeneity. In addition to general estimation frameworks, particular methods of moments and maximum likelihood, specific linear and nonlinear methods are covered in detail, including probit and logit models and their multivariate Tobit models, models for count data, censored and missing data schemes, causal or treatment effects, and duration analysis. *Econometric Analysis of Cross Section and Panel Data* was the first graduate econometrics text to focus on microeconomic data structures, allowing assumptions to be separated into population and sampling assumptions. This second edition has been substantially updated and revised. Improvements include a broader class of models for missing data problems, more detailed treatment of cluster problems, an important topic for empirical researchers, expanded discussion of generalized instrumental variables (GIV) estimation, new coverage based on the author's own recent research of inverse probability weighting, a more complete framework for estimating treatment effects with panel data, and a firmly established link between econometric approaches to nonlinear panel data and the generalized estimating equation literature popular in statistics and other fields. New attention is given to explaining when particular econometric methods can be applied; the goal is not only to tell readers what does work but why certain obvious procedures do not. The numerous included exercises, both theoretical and computer based, allow the reader to extend methods covered in the text and discover new insights.

Baltagi,2009-06-15 Econometric Analysis of Panel Data has become established as the leading textbook for postgraduate courses in panel data This book is intended as a companion to the main text Applied Econometric Analysis Using Cross Section and Panel Data Deep Mukherjee,2024-01-03 This book is a collection of 20 chapters on chosen topics from cross section and panel data econometrics It explores both theoretical and practical aspects of selected cutting edge techniques which are gaining popularity among applied econometricians while following the motto of keeping things simple Each chapter gives a basic introduction to one such method directs readers to supplementary references and shows an application The book takes into account that A The field of econometrics is evolving very fast and leading textbooks are trying to cover some of the recent developments in revised editions This book offers basic introduction to state of the art techniques and recent advances in econometric models with detailed applications from various developing and developed countries B An applied researcher or practitioner may prefer reference books with a simple introduction to an advanced econometric method or model with no theorems but with a longer discussion on empirical application Thus an applied econometrics textbook covering these cutting edge methods is highly warranted a void this book attempts to fills The book does not aim at

providing a comprehensive coverage of econometric methods The 20 chapters in this book represent only a sample of the important topics in modern econometrics with special focus on econometrics of cross section and panel data while also recognizing that it is not possible to accommodate all types of models and methods even in these two categories The book is unique as authors have also provided the theoretical background if any and brief literature review behind the empirical applications It is a must have resource for students and practitioners of modern econometrics **The Econometric**

**Analysis of Non-Stationary Spatial Panel Data** Michael Beenstock, Daniel Felsenstein, 2019-03-27 This monograph deals with spatially dependent nonstationary time series in a way accessible to both time series econometricians wanting to understand spatial econometrics and spatial econometricians lacking a grounding in time series analysis After charting key concepts in both time series and spatial econometrics the book discusses how the spatial connectivity matrix can be estimated using spatial panel data instead of assuming it to be exogenously fixed This is followed by a discussion of spatial nonstationarity in spatial cross section data and a full exposition of non stationarity in both single and multi equation contexts including the estimation and simulation of spatial vector autoregression VAR models and spatial error correction ECM models The book reviews the literature on panel unit root tests and panel cointegration tests for spatially independent data and for data that are strongly spatially dependent It provides for the first time critical values for panel unit root tests and panel cointegration tests when the spatial panel data are weakly or spatially dependent The volume concludes with a discussion of incorporating strong and weak spatial dependence in non stationary panel data models All discussions are accompanied by empirical testing based on a spatial panel data of house prices in Israel *Econometrics of Panel Data* Erik Biørn, 2016-10-17 Panel data is a data type increasingly used in research in economics social sciences and medicine Its primary characteristic is that the data variation goes jointly over space across individuals firms countries etc and time over years months etc Panel data allow examination of problems that cannot be handled by cross section data or time series data Panel data analysis is a core field in modern econometrics and multivariate statistics and studies based on such data occupy a growing part of the field in many other disciplines The book is intended as a text for master and advanced undergraduate courses It may also be useful for PhD students writing theses in empirical and applied economics and readers conducting empirical work on their own The book attempts to take the reader gradually from simple models and methods in scalar simple vector notation to more complex models in matrix notation A distinctive feature is that more attention is given to unbalanced panel data the measurement error problem random coefficient approaches the interface between panel data and aggregation and the interface between unbalanced panels and truncated and censored data sets The 12 chapters are intended to be largely self contained although there is also natural progression Most of the chapters contain commented examples based on genuine data mainly taken from panel data applications to economics Although the book inter alia through its use of examples is aimed primarily at students of economics and econometrics it may also be useful for readers in

social sciences psychology and medicine provided they have a sufficient background in statistics notably basic regression analysis and elementary linear algebra

**Econometric Analysis of Panel Data Models with Multifactor Error Structures** Hande Karabiyik,Franz C. Palm,Jean-Pierre Urbain,2019 Economic panel data often exhibit cross sectional dependence even after conditioning on appropriate explanatory variables Two approaches to modeling cross sectional dependence in economic panel data are often used the spatial dependence approach which explains cross sectional dependence in terms of distance among units and the residual multifactor approach which explains cross sectional dependence by common factors that affect individuals to a different extent This article reviews the theory on estimation and statistical inference for stationary and nonstationary panel data with cross sectional dependence particularly for models with a multifactor error structure Tests and diagnostics for testing for unit roots slope homogeneity cointegration and the number of factors are provided We discuss issues such as estimating common factors dealing with parameter plethora in practice testing for structural stability and nonlinearity and dealing with model and parameter uncertainty Finally we address issues related to the use of these economic panel models

**Econometrics in Theory and Practice** Panchanan Das,2019-09-05 This book introduces econometric analysis of cross section time series and panel data with the application of statistical software It serves as a basic text for those who wish to learn and apply econometric analysis in empirical research The level of presentation is as simple as possible to make it useful for undergraduates as well as graduate students It contains several examples with real data and Stata programmes and interpretation of the results While discussing the statistical tools needed to understand empirical economic research the book attempts to provide a balance between theory and applied research Various concepts and techniques of econometric analysis are supported by carefully developed examples with the use of statistical software package Stata 15.1 and assumes that the reader is somewhat familiar with the Stata software The topics covered in this book are divided into four parts Part I discusses introductory econometric methods for data analysis that economists and other social scientists use to estimate the economic and social relationships and to test hypotheses about them using real

world data There are five chapters in this part covering the data management issues details of linear regression models the related problems due to violation of the classical assumptions Part II discusses some advanced topics used frequently in empirical research with cross section data In its three chapters this part includes some specific problems of regression analysis Part III deals with time series econometric analysis It covers intensively both the univariate and multivariate time series econometric models and their applications with software programming in six chapters Part IV takes care of panel data analysis in four chapters Different aspects of fixed effects and random effects are discussed here Panel data analysis has been extended by taking dynamic panel data models which are most suitable for macroeconomic research The book is invaluable for students and researchers of social sciences business management operations research engineering and applied mathematics
