how these challenges for food security can be addressed globally and in a number of countries that face these challenges most acutely According to the World Food Summit food security exists when all people at all times have physical and economic access to sufficient safe and nutritious food to meet their dietary needs and food preferences for an active and healthy life The implication is that lack of food security would overlap with hunger both overt and hidden and undernutrition and would have spillover effects onto the health of and labor market performance of those affected by such insecurity This range of issues have guided the choice of contributions to this volume Several manifestations of these topics are covered for a number of countries in Asia and Africa *Capacity development for resilient food systems* Babu, Suresh Chandra,Blom, Sylvia,2014-04-30 Food systems face shocks varying in breadth and duration from a wide array of sources These shocks can affect all aspects of a country s food system threatening the food security of its citizens Low levels of capacity to address food system shocks are a major development challenge This paper presents a conceptual framework for assessing the capacity of a food system to become more resilient regardless of what kind of threat it faces It suggests that food systems can be categorized into three subsystems a policy system markets trade and institutions and a production system Within each of these systems three dimensions of capacity are analyzed individual capacity organizational capacity and system capacity The paper explores examples of building capacity within this framework and identifies key knowledge and research gaps It also presents a typology as a possible tool for prioritizing investments in capacity building for resilience across countries
