Economic Choice Theory An Experimental Analysis Of Animal Behavior:

Economic Choice Theory John H. Kagel, Raymond C. Battalio, Leonard Green, 1995-01-27 This book describes the authors research program using laboratory animals to investigate individual choice theory in economics **Economic Choice Theory** John Henry Kagel, 1995 This book details the results of the authors research using laboratory animals to investigate individual choice theory in economics particularly consumer demand and labor supply behavior and choice under uncertainty The use of laboratory animals provides the opportunity to conduct controlled experiments involving precise and demanding tests of economic theory with rewards and punishments of real consequence Economic models are compared with psychological and biological choice models along with the results of experiments testing between these competing explanations Results of animal experiments are used to address questions of importance related to social policy A number of new experimental results are reported along with summaries of the authors previously published studies and related research **The Wiley Blackwell Handbook of Operant and Classical Conditioning** Frances K. McSweeney, Eric S. Murphy, 2014-06-23 This combined survey of operant and classical conditioning provides professional and academic readers with an up to date inclusive account of a core field of psychology research with in depth coverage of the basic theory its applications and current topics including behavioral economics Provides comprehensive coverage of operant and classical conditioning relevant fundamental theory and applications including the latest techniques Features chapters by leading researchers professionals and academicians Reviews a range of core literature on conditioning Covers cutting edge topics such as behavioral economics **Behavioral and neuroscientific analysis of economic decision making in animals** Tobias Kalenscher, Marijn Van Wingerden, The experimental analysis of animal behavior has a rich tradition in psychology behavioral ecology and many other scientific branches dedicated to the study of decision making However it has never enjoyed a similar popularity in economics This has recently changed with the dawn of neuroeconomics a discipline combining the analytic and experimental tools of psychology and economics with the technologies available in neuroscience to unravel the neurobiological mechanisms underlying economic behavior Since many of the sophisticated neuroscientific techniques can only be used on animals neuroeconomists have come up with a large and ever growing repertoire of animal models to probe economic decision making Besides the value of using animals as model systems to emulate human economic behavior the discipline of animal economic decision making exists in its very own right an abundance of animal species at various evolutionary stages show behavior that complies with many of the predictions of economic theory whilst at the same time demonstrating violations of optimal choice models that are reminiscent of similar anomalies found in human behavior Hence the analysis of animal choice does not only offer insights into the evolutionary origins of economic decision making it also testifies that the analysis of animal behavior is a convenient economical and sound way to test competing economic decision models in optimally controlled experimental environments to probe their neural implementation and to yield common

denominators in choice behavior In short economic theory provides more than just an alternative language to describe animal psychology its combination with biology psychology and neuroscience gives way to synergy effects that open up new venues for studying economic choice In this special issue we would like to gather the latest results from this cross disciplinary topic address the overlap and discrepancies in the neurobiology of economic decision making found between species and identify the challenges that lie ahead in translating results from species to species and ultimately to humans The exclusive focus on non human animals makes this Research Topic unique and distinct from previous special issues which covered a broader range of matters and subjects in the neurobiological analysis of decision making **Birth of Modern Facts** James W.

Stigum,2015-12-29 As most econometricians will readily agree the data used in applied econometrics seldom provide accurate measurements for the pertinent theory s variables Here Bernt Stigum offers the first systematic and theoretically sound way of accounting for such inaccuracies He and a distinguished group of contributors bridge econometrics and the philosophy of economics two topics that seem worlds apart They ask How is a science of economics possible The answer is elusive Economic theory seems to be about abstract ideas or it might be said about toys in a toy community How can a researcher with such tools learn anything about the social reality in which he or she lives This book shows that an econometrician with the proper understanding of economic theory and the right kind of questions can gain knowledge about characteristic features of the social world It addresses varied topics in both classical and Bayesian econometrics offering ample evidence that its answer to the fundamental question is sound The first book to comprehensively explore economic theory and econometrics simultaneously *Econometrics and the Philosophy of Economics* represents an authoritative account of contemporary economic methodology About a third of the chapters are authored or coauthored by Heather Anderson Erik Bi rn Christophe Bontemps Jeffrey A Dubin Harald E Goldstein Clive W J Granger David F Hendry Herman Ruge Jervell Dale W Jorgenson Hans Martin Krolzig Nils Lid Hjort Daniel L McFadden Grayham E Mizon Tore Schweder Geir Storvik and Herman K van Dijk **Economics of Crime and Enforcement** Anthony M. Neuroeconomics Laurie R. Santos, Michael L. Platt, 2013-08-13 In this chapter we discuss why behavioral studies of irrational biases in non human primates are important for the field of neuroeconomics We begin with a review of how behavioral work on choice biases in monkeys is important for understanding the nature of human choice errors We then provide an introduction to the primate cognition approach including a short overview of the organization of the primate order We then briefly review the ecology and cognition of two primate species standardly used as models of human irrational decision making brown capuchins and rhesus macaques We next discuss empirical studies demonstrating that monkeys show human like irrational errors in three of the classic situations in which human participants fall prey to biases monkeys exhibit framing effects in risky decisions they show endowment effects and they are averse to ambiguous outcomes We conclude our chapter with a discussion of how future work in neuroeconomics can capitalize on these new behavioral findings in monkeys
