*Economic Systems of Foraging, Agricultural, and Industrial Societies* Frederic L. Pryor, 2005 Drawing upon the disciplines of economics anthropology statistics and history and employing a new and unified analytic approach Frederic L. Pryor reformulates in this book the entire field of comparative economic systems He examines large samples of foraging hunting gathering and fishing agricultural and industrial economies to explore four key questions What are the distinct economic systems found in each group Why do certain societies or nations have one economic system rather than another What impact do economic systems have on the performance of the economy How do these economic systems develop and change The results provide a context that allows us to move beyond the chaos of case studies and ideological assertions to gain an overview of the development of economic systems over the millennia It also raises a series of new analytic and empirical issues that have not hitherto been systematically explored

in living standards technology and economic institutions In short the Middle East had failed to modernize economically as the West surged ahead What caused this long divergence And why does the Middle East remain drastically underdeveloped compared to the West In The Long Divergence one of the world s leading experts on Islamic economic institutions and the economy of the Middle East provides a new answer to these long debated questions Timur Kuran argues that what slowed the economic development of the Middle East was not colonialism or geography still less Muslim attitudes or some incompatibility between Islam and capitalism Rather starting around the tenth century Islamic legal institutions which had benefitted the Middle Eastern economy in the early centuries of Islam began to act as a drag on development by slowing or blocking the emergence of central features of modern economic life including private capital accumulation corporations large scale production and impersonal exchange By the nineteenth century modern economic institutions began to be transplanted to the Middle East but its economy has not caught up And there is no quick fix today Low trust rampant corruption and weak civil societies all characteristic of the region s economies today and all legacies of its economic history will take generations to overcome The Long Divergence opens up a frank and honest debate on a crucial issue that even some of the most ardent secularists in the Muslim world have hesitated to discuss

**Where Do Cities Come From and Where Are They Going To? Modelling Past and Present Agglomerations to Understand Urban Ways of Life** Francesca Fulminante, John William Hanson, Scott G. Ortman, Luis M. A. Bettencourt, 2021-01-25 Over the last decade there has been a surge of interest in urbanization and economic development sparked by the realization that making urban life sustainable is one of the greatest challenges facing us in the 21st century this is now one of the core sustainable development goals of the United Nations This has exerted considerable pressure on researchers to come up with more scientific ways of studying urbanism and economic activity over the long run which has resulted not only in the development of new theoretical frameworks but also in the collection of vast amounts of data from a range of settings This has led to the realization that although there are significant differences between settlements in different settings there are nonetheless important regularities and commonalities between a diverse group of settlements in range of geographical and historical contexts including both ancient and modern ones This suggests that a common feature of settlements is their ability to generate increased social connectivity greater division of labour and specialization and enhanced technological invention and innovation albeit with costs to levels of equality quality of life and standards of living as well as impacts on the environment which cannot be separated from the emergence of confederations and states and the creation of settlement systems hierarchies and networks We believe that this field of enquiry now stands at a critical juncture Although it is now feasible to talk about many aspects of ancient and modern urbanism with relative confidence such as the numbers of cities or their sizes much of the discussion of these themes within historical and archaeological circles has been on a discursive or qualitative level while it is often difficult to harmonize the different models that have been applied to date into a consistent empirical and theoretical framework A

new approach to settlements throughout different contexts should now be within our grasp however thanks to both the ease with which information can be disseminated and the facilities that recent developments in IT offer us to model analyse and statistically test data

**City and Country** Alexander R. Thomas, Gregory M. Fulkerson, 2021-06-17 City and Country The Historical Evolution of Urban Rural Systems begins with a simple assumption every human requires on average two thousand calories per day to stay alive Tracing the ramifications of this insight leads to the caloric well the caloric demand at one point in the environment As population increases the depth of the caloric well reflects this increased demand and requires a population to go further afield for resources a condition called urban dependency City and Country traces the structural ramifications of these dynamics as the population increased from the Paleolithic to today We can understand urban dependency as the product of the caloric demands a population puts on a given environment and when those demands outstrip the carry capacity of the environment a caloric well develops that forces a community to look beyond its immediate area for resources As the well deepens the horizon from which resources are gathered is pushed further afield often resulting in conflict with neighboring groups Prior to settled villages increases in population resulted in cultural technological innovations that allowed for greater use of existing resources the broad spectrum revolution circa 20 thousand years ago the birth of agricultural villages 11 thousand years ago and hierarchically organized systems of multiple settlements working together to produce enough food during the Ubaid period in Mesopotamia seven thousand years ago the first urban rural systems As cities developed increasing population resulted in an ever deepening morass of urban dependency that required expansion of urban rural systems These urban rural dynamics today serve as an underlying logic upon which modern capitalism is built The culmination of two decades of research into the nature of urban rural dynamics City and Country argues that at the heart of the logic of capitalism is an even deeper logic urbanization is based on urban dependency

*Gender and Rural Development: Advanced studies* Olanike F. Deji, 2011 The gender irresponsible nature of most textbooks for postgraduate studies in agriculture contributes immensely to the prevalence of gender inequality in the agricultural profession production policies and budgeting which promotes rural poverty and food insecurity in most developing countries of Africa including Nigeria This book is an appropriate resource for gender responsive and advanced agricultural teaching research and rural community development services Series Spektrum Berliner Reihe zu Gesellschaft Wirtschaft und Politik in Entwicklungsländern Berlin Series on Society Economy and Politics in Developing Countries Vol 107

*Socio-Metabolic Perspectives on the Sustainability of Local Food Systems* Eva Fraňková, Willi Haas, Simron J. Singh, 2018-01-09 This book delves into diverse local food systems and critically assesses their ecological and societal benefits and trade offs their limits and opportunities for improving sustainability of food production and framework conditions which either hinder or promote their development More and more people with gradually meat heavier diets will demand growth in food production whilst our increasingly industrialized and globalized agri food system has already caused serious sustainability problems in the past

This calls for a change in the way we produce distribute and consume food A re emerging debate on food security and food sovereignty seems to support this quest But what are the promising alternatives to mainstream developments Such a discussion regarding sustainability of local food systems requires a sound systemic understanding and thus invites a socio metabolic reading of local cases by analyzing the nexus between material and energy flows as well as land and time use This approach is needed to complement the so far mostly qualitatively based local food studies Applying socio metabolic approaches to local food systems fosters a better understanding of promises and pitfalls for sustainable pathways in the future

**The Industrial Revolution in World History** Peter N Stearns,2018-04-17 The industrial revolution was the single most important development in human history over the past three centuries and it continues to shape the contemporary world With new methods and organizations for producing goods industrialization altered where people live how they play and even how they define political issues By exploring the ways the industrial revolution reshaped world history this book offers a unique look into the international factors that started the industrial revolution and its global spread and impact In the fourth edition noted historian Peter N Stearns continues his global analysis of the industrial revolution with new discussions of industrialization outside of the West including the study of India the Middle East and China In addition an expanded conclusion contains an examination of the changing contexts of industrialization The Industrial Revolution in World History is essential for students of world history and economics as well as for those seeking to know more about the global implications of what is arguably the defining socioeconomic event of modern times

**Economic Persuasions** Stephen Gudeman,2009 As the transition from socialism to a market economy gathered speed in the early 1990s many people proclaimed the final success of capitalism as a practice and neoliberal economics as its accompanying science But with the uneven achievements of the transition the deepening problems of development persistent unemployment the widening of the wealth gap and expressions of resistance the discipline of economics is no longer seen as a mirror of reality or as a unified science How should we understand economics and more broadly the organization and disorganization of material life In this book international scholars from anthropology and economics adopt a rhetorical perspective in order to make sense of material life and the theories about it Re examining central problems in the two fields and using ethnographic and historical examples they explore the intersections between these disciplines contrast their methods and epistemologies and show how a rhetorical approach offers a new mode of analysis while drawing on established contributions

**Space, Movement and the Economy in Roman Cities in Italy and Beyond** Frank Vermeulen,Arjan Zuiderhoek,2021-05-26 How were space and movement in Roman cities affected by economic life What can the study of Roman urban landscapes tell us about the nature of the Roman economy These are the central questions addressed in this volume While there exist many studies of Roman urban space and of the Roman economy rarely have the two topics been investigated together in a sustained fashion In this volume an international team of archaeologists and historians focuses explicitly on the economics of space and mobility in

Roman Imperial cities in both Italy and the provinces east and west Employing many kinds of material and written evidence and a wide range of methodologies the contributors cast new light both on well known and on less explored sites With their direct focus on the everyday economic uses of urban spaces and the movements through them the contributors offer a fresh and innovative perspective on the workings of Roman urban economies and on the debates concerning space in the Roman world This volume will be of interest to archaeologists and historians both those studying the Greco Roman world and those focusing on urban economic space in other periods and places as well as to other scholars studying premodern urbanism and urban economies     Journal of Economic Literature ,2005
