Harmonic Analysis And Representations Of Semisimple Lie Groups:

Harmonic Analysis and Representations of Semisimple Lie Groups J.A. Wolf, M. Cahen, M. de Wilde, 2012-12-06 This book presents the text of the lectures which were given at the NATO Advanced Study Institute on Representations of Lie groups and Harmonic Analysis which was held in Liege from September 5 to September 17 1977 The general aim of this Summer School was to give a coordinated introduction to the theory of representations of semisimple Lie groups and to non commutative harmonic analysis on these groups together with some glance at physical applications and at the related subject of random walks As will appear to the reader the order of the papers which follows relatively closely the order of the lectures which were actually given follows a logical pattern The two first papers are introductory the one by R Blattner describes in a very progressive way a path going from standard Fourier analysis on \mathbb{R} to non commutative harmonic analysis on a locally compact group the paper by J Wolf describes the structure of semisimple Lie groups the finite dimensional representations of these groups and introduces basic facts about infinite dimensional unitary representations Two of the editors want to thank particularly these two lecturers who were very careful to pave the way for the later lectures Both these chapters give also very useful guidelines to the relevant literature

An Introduction to Harmonic Analysis on Semisimple Lie Groups V. S. Varadarajan, 1999-07-22 Now in paperback this graduate level textbook is an introduction to the representation theory of semi simple Lie groups As such it will be suitable for research students in algebra and analysis and for research mathematicians requiring a readable account of the topic The author emphasizes the development of the central themes of the subject in the context of special examples without losing sight of its general flow and structure The book concludes with appendices sketching some basic topics with a comprehensive guide to further reading

Representation Theory and Harmonic Analysis on Semisimple Lie Groups Paul J. Sally (Jr.), David A. Vogan, 1989 This book brings together five papers that have been influential in the study of Lie groups Though published more than 20 years ago these papers made fundamental contributions that deserve much broader exposure In addition the subsequent literature that has subsumed these papers cannot replace the originality and vitality they contain The editors have provided a brief introduction to each paper as well as a synopsis of the major developments which have occurred in the area covered by each paper Included here are the doctoral theses of Arthur Osborne and Schmid Arthur's thesis is closely related to Trombi's paper insofar as both deal with harmonic analysis on real semisimple Lie groups and in particular analysis on the Schwartz space of Harish Chandra Arthur's thesis is concerned with the image under the Fourier transform of the Schwartz space of a semisimple Lie group of real rank one while Trombi's paper provides an expository account of the harmonic analysis associated to the decomposition of the Schwartz space under the regular representation In his thesis Osborne extends the Atiyah Bott fixed point theorem for elliptic complexes to obtain a fixed point formula for complexes that are not elliptic Schmid proves a generalization of the Borel Weil theorem concerning an explicit and geometric realization of the irreducible representations of a compact
