Huixuan Zhou, Feng Jiang, Yi-lang Tang, 2025-09-15 Health related behaviors play positive or negative roles in people s health For instance health risk behaviors such as sedentary behaviors e g binge watching TV and playing computer games the use of alcohol tobacco or other substances and lack of sleep have been found to negatively affect the physical and mental health of people On the other hand some studies show that health promoting behaviors such as physical activity and healthy dietary habits can mitigate or reverse the negative effects of health risk behaviors on health outcomes In the meantime some studies indicate that the harmful effects of some health risk behaviors may not be mitigated by health promoting behaviors For instance some studies show that sedentary behaviors and physical activity are independently associated with some physical and mental health outcomes interventions to increase physical activity with and without decreasing sedentary time lead to different health outcomes Clearly more research is needed to show the interaction between health promoting behaviors and health risk behaviors in health which could shed light on the management of health

Dynamic systems theory and embodiment in psychotherapy research. A new look at process and outcome Sergio Salvatore,Wolfgang Tschacher,Omar Carlo Gioacchino Gelo,Sabine C Koch,2016-04-11 In an attempt to cease from reducing the world and its emergent phenomena to linear modeling and analytic dissection Dynamic Systems Theories DST and Embodiment theories and methods aim at accounting for the complex dynamic and non linear phenomena that we constantly deal with in psychology For instance DST and Embodiment can enrich psychology s understanding of the communicative process both in clinical and non clinical settings In psychotherapy an important amount of research has shown that next to other ingredients the therapeutic relationship is the most important active factor contributing to psychotherapy outcome These findings give communication a central role in the psychotherapy process In the traditional view the underlying model of understanding psychotherapy processes is that of a number of components summatively coming together enabling us to make a linear causal prediction Yet communication is inherently dynamic A shift to viewing the communication process in psychotherapy as a field dynamic phenomenon helps us to take into account nonlinear phenomena such as feedback processes within and

between persons We thus propose an embodied enactive dynamic systems view as a new theoretical and methodological perspective that can more realistically capture what happens among and between two persons in psychotherapy This view reaches beyond the current narrow model of psychotherapy research DST and Embodied Enactive Approaches can offer solutions to the loss of non linear phenomena the complex dynamics of reality and the holistic level of analysis DST and Embodied Enactive Approaches have developed not in a single discipline but in a joined movement based on various fields such as physics biology robotics anthropology philosophy linguistics neuroscience and psychology and have only recently entered clinical theorizing The two new paradigms have already triggered a rethinking of the therapeutic exchange by recognizing the embodied nature of psychological and communicative phenomena Their integration opens up a promising scenario in the field of psychotherapy research developing new profoundly transdisciplinary theoretical concepts methodologies and standards of knowledge The notion of field dynamics enables us to account for the role of the communicational context in the regulation of intra psychological processes while at the same time avoiding the pitfalls of an ontologization of the hierarchy of systemic organization Moreover the new approach implements methodological strategies that can transcend the conventional opposition between idiographic and nomothetic sciences

Handbook of Parenting: Being and becoming a parent Marc H. Bornstein, 2002. Despite the fact that most people become parents and everyone who has ever lived has had parents, parenting remains a mystifying subject about which almost everyone has opinions but about which few people agree. Striking permutations on the theme of parenting are emerging: single parenthood, blended families, lesbian and gay parents, and teen versus fifty-first time moms and dads. Divided into four volumes, the Handbook of Parenting is concerned with different types of parents, basic characteristics of parenting, forces that shape parenting problems faced by parents, and the practical sides of parenting. Contributors have worked in different ways toward understanding all of these diverse aspects of parenting and look to the most recent research and thinking in the field to shed light on many topics every parent has wondered about. Because development is too subtle, dynamic, and intricate to admit that parental caregiving alone determines the course and outcome of ontogeny.
