Risk Assessment and Management in the Context of the Seveso II Directive Michalis D Christou, Georgios A Papadakis, 1998-02-18 The assessment and management of risk to society from the operation of chemical process plants and other industrial activities in which dangerous substances are produced used handled or stored will remain a topic of great importance in the next decade In order to evaluate this specific risk on a qualitative and or quantitative basis the concepts of risk analyses are linked together in this book The performance based and goal oriented regulatory requirements of the European Council s new Seveso II Directive for the identification of large scale industrial hazards prevention of sudden and uncontrolled releases of dangerous substances from industrial plants and mitigation of serious consequences of industrial accidents to people and the environment are examined The fact that risk assessment and management are key elements to such forms of regulation is also demonstrated While the Seveso II Directive defines what has to be achieved on the control of major hazards involving dangerous substances within the European Union the methods of risk assessment and management give guidance on how to achieve it The text provides a practical guide for decision makers in regulatory bodies and companies with a non technical background Scientists and engineers who are not yet familiar with the concepts of risk assessment and who want a survey of some fundamentals of and principal results from risk assessment studies and approaches primarily for applications in the context defined by the Seveso Directives will also find this book invaluable
