Marks,2020-01-29 For centuries London has been at the centre of the social and economic fabric of British life and its empire London has not only been renowned for its pivotal role in the world of finance and politics but also for its acute problems of overcrowding and social and economic dislocation Starting in 1902 and

ending just before the outbreak of the Second World War Metropolitan Maternity highlights the distinct role London played in these years within the debates and policies concerning the economic and military future and physical welfare of the nation Focusing on the expansion of maternal and child health and welfare services in the early twentieth century this book shows that London mothers and children tended to be better served than those in provincial cities or rural areas Yet even in London some areas were better served than others A central theme of the book is the complexity of socio economic and political forces that determined the differing levels of provision and health standards within the city The book also examines the increasing emphasis placed on state sponsorship of health services in the early twentieth century and the growing willingness to involve and listen to mothers and their needs in the planning and development of services Community Nursing G. Baker,J. M. Bevan,L. McDonnell,B. Wall,2025-09-17 Originally published in 1987 this book is based on material generated by the former Department of Health and Social Security DHSS research project into development in community nursing since the 1974 reorganisation of the National Health Service in the UK The community nursing staff involved comprised health visitors district nurses and practice nurses A wide range of issues which have enduring relevance today include staffing levels education health service priorities government policies changing professional roles and innovations in professional practice The authors consider evaluative research undertaken to assess the pros and cons of developments

**Social Work in General Practice** E. Matilda Goldberg,June E. Neill,2021-11-07 In the early 1970s general practitioners were well aware that they were being asked to deal not only with physical illness in their patients but also with the stresses relating to social and emotional problems Increasingly often they were working together with health visitors and social workers in attempting to respond more effectively to these demands Originally published in 1972 this study describes the attachment of a social worker to a group general medical practice in London indicating why for all social groups the general practice is an appropriate point at which psychosocial problems may

be identified and treated The authors describe the nature and range of patients problems that come to light in the consulting room how patients present their problems to the social worker and the kind of help the social worker is able to offer They explore the extent to which the general practice setting provides opportunities for preventive therapy and further describe how social work in general practice can most effectively be related to existing social services in the community particularly to the reorganised personal social services Their findings are supported throughout by illuminating case studies The book also discusses the integration of the social worker into the general practice team the problems that have to be solved and the mutual enlightenment that results This emerges as an extremely encouraging and instructive experiment which will immediately interest social service departments and social workers doctors and nurses both students and those in practice The wide spectrum of social problems encountered and dealt with by the social worker in a general practice make it a particularly stimulating account

**Keeping Children Healthy** Berry Mayall, 2025-06-20 In Britain class differences in children's health remain wide and it is often assumed that an important contributory factor is class differences in the attitudes and behaviours of mothers Originally published in 1986 *Keeping Children Healthy* draws on an empirical study to throw light on mothers actual health care of their young children and to consider what differences if any there are between groups of mothers The book is about how women care for their children's health what they think matters what they actually do and what affects their actions Throughout mothers perspectives are considered in the light of the social and material context of their family lives their income their housing the neighbourhood the network of friends and relatives access to services and the quality of services available The author shows that mothers have a highly responsible approach to child health care and high standards for good health in children despite the fact that socially disadvantaged mothers have to contend with many constraints in caring for their children as they wish A central aspect of the book is the question of whom mothers turn to for help and what they consider to be the role of professionals in helping them in their child care work Indeed the book provides essential and illuminating reading for all those who have professional dealings with the parents of young children such as doctors social workers health visitors and teachers and the policy makers and administrators who plan and run health and day care services Parents who work continuously to ensure their children's health will find much to recognize and much to think about in this book
