Kosslyn, 2013-12 A rich source of authoritative information that supports reading and study in the field of cognitive neuroscience this two volume handbook reviews the current state of the science in all major areas of the field *Handbook of Children's Literacy* Terezinha Nunes, Peter Bryant, 2013-03-09 PETER BRYANT TEREZINHA NUNES The time that it takes children to learn to read varies greatly between different orthographies as the chapter by Sprenger Charolles clearly shows and so do the difficulties that they encounter in learning about their own orthography Nevertheless most people who have the chance to learn to read do in the end read well enough even though a large number experience some significant difficulties on the way Most of them eventually become reasonably efficient spellers too even though they go on make spelling mistakes at any rate if they are English speakers for the rest of their lives So the majority of humans plainly does have intellectual resources that are needed for reading and writing but it does not always find these resources easy to marshal What are these resources Do any of them have to be acquired Do different orthographies make quite different demands on the intellect Do people differ significantly from each other in the strength and accessibility of these resources If they do are these differences an important factor in determining children's success in learning to read and write These are the main questions that the different chapters in this section on Basic Processes set out to answer **Molecular Genetics of Inherited Eye Disorders** Alan F. Wright, 1994-12-01 *Molecular Genetics of Inherited Eye Disorders* provides an authoritative and up to date account of molecular genetic advances in a wide spectrum of genetic eye disorders and forms the second volume in the *Modern Genetics* book series The field has produced some dramatic and often unexpected findings in recent years ranging from the elegant unravelling of the molecular basis of colour vision defects to the subtle complexity of the retinoblastoma gene The role of crystallins in congenital cataract and of the rhodopsin molecule in retinitis pigmentosa are discussed illustrating the importance of the candidate gene approach to genetic eye disease Reverse genetic approaches to the cloning of genes
