Elements of Meaning in Gesture Geneviève Calbris,2011-11-09

Summarizing her pioneering work on the semiotic analysis of gestures in conversational settings Genevi ve Calbris offers a comprehensive account of her unique perspective on the relationship between gesture speech and thought She highlights the various functions of gesture and especially shows how various gestural signs can be created in the same gesture by analogical links between physical and semantic elements Originating in our world experience via mimetic and metonymic processes these analogical links are activated by contexts of use and thus lead to a diverse range of semantic constructions rather as from the components of a Meccano kit many different objects can be assembled By re presenting perceptual schemata that mediate between the concrete and the abstract gesture may frequently anticipate verbal formulation Arguing

for gesture as a symbolic system in its own right that interfaces with thought and speech production Calbris book brings a challenging new perspective to gesture studies and will be seminal for generations of gesture researchers **Thinking Visually** Stephen K. Reed, 2013-08-21 Language is a marvelous tool for communication but it is greatly overrated as a tool for thought This volume documents the many ways pictures visual images and spatial metaphors influence our thinking It discusses both classic and recent research that support the view that visual thinking occurs not only where we expect to find it but also where we do not Much of comprehending language for instance depends on visual simulations of words or on spatial metaphors that provide a foundation for conceptual understanding Thinking Visually supports comprehension by reducing jargon and by providing many illustrations educational applications and problems for readers to solve It provides a broad overview of topics that range from the visual images formed by babies to acting classes designed for the elderly from visual diagrams created by children to visual diagrams created by psychologists from producing and manipulating images to viewing animations The final chapters discuss examples of instructional software and argue that the lack of such software in classrooms undermines the opportunity to develop visual thinking The book includes the Animation Tutor™ downloadable resources to illustrate the application of research on visual thinking to improve mathematical reasoning **Classical and Contemporary Social Theory** Tim Delaney, 2016-01-08 Classical and Contemporary Social Theory Investigation and Application 1 e is the most comprehensive informative social theory book on the market The title covers multiple schools of thought and applies their ideas to society today Readers will learn the origins of social theory and understand the role of myriad social revolutions that shaped the course of societies around the world *Analysis of Neurogenic Disordered Discourse Production* Anthony Pak-Hin Kong, 2016-03-10 Analysis of Neurogenic Disordered Discourse Production provides a comprehensive review and discussion of aphasia and its related disorders their corresponding clinical discourse symptoms that speech language pathologists and related healthcare professionals should address and the different methods of discourse elicitation that are research and clinically oriented Contemporary issues related to disordered clinical discourse production are covered and discussions of various treatment options in relation to discourse symptoms are included Finally the manifestation of discourse symptoms as a function of speakers bilingual multilingual status and specific considerations related to clinical assessment and intervention are explored Readers who want to learn the background and techniques of discourse analysis refresh their knowledge of discourse production update their knowledge of assessment and treatment of discourse production and learn about contemporary issues of discourse annotation and analysis using existing computer software will find this book a valuable tool With its comprehensive coverage it offers a thorough understanding of the nature assessment and remediation of discourse deficits in aphasia and related disorders Readers will also benefit from examples throughout the book that connect theory to real life contexts of discourse production **Challenging the Phenomena of Technology** M. Hayler, 2015-05-07 What is technology What does it help us to do What does it force us to consider about our

experience of being in the world In Challenging the Phenomena of Technology technology is positioned as an experience with specific features rather than as a class of objects and this enables a reflection on the ways in which amateurs and experts interact with the artefacts that all humans rely upon Using e readers such as the Kindle and iPad as a case study Hayler argues that the use of technology is both more complicated and more human than public discussion often gives it credit for forcing us to consider its impacts on perception cognition and what it means to know anything at all

Knowledge and Interaction Andrea A. diSessa, Mariana Levin, Nathaniel J.S. Brown, 2015-12-07 Decades of research in the cognitive and learning sciences have led to a growing recognition of the incredibly multi faceted nature of human knowing and learning Up to now this multifaceted nature has been visible mostly in distinct and often competing communities of researchers From a purely scientific perspective siloed science where different traditions refuse to speak with one another or merely ignore one another is unacceptable This ambitious volume attempts to kick start a serious new line of work that merges or properly articulates different traditions with their divergent historical theoretical and methodological commitments that nonetheless both focus on the highly detailed analysis of processes of knowing and learning as they unfold in interactional contexts in real time Knowledge and Interaction puts two traditions in dialogue with one another Knowledge Analysis KA which draws on intellectual roots in developmental psychology and cognitive modeling and focuses on the nature and form of individual knowledge systems and Interaction Analysis IA which has been prominent in approaches that seek to understand and explain learning as a sequence of real time moves by individuals as they interact with interlocutors learning environments and the world around them The volume s four part organization opens up space for both substantive contributions on areas of conceptual and empirical work as well as opportunities for reflection integration and coordination
