 John Gardner, 2017-10-02 Assessment of educational achievement whether by traditional examinations or by teachers in
 schools attracts considerable public interest particularly when it is associated with high stakes outcomes such as university
 entry or selection for employment When the individual's results do not chime with their or their teachers' expectations doubts
 creep in about the process of assessment that has arrived at this result However educational assessment is made up of many
 layers of complexity which are not always clear to the general public including teachers students and parents and which are
 not easily understood outside of the expert assessment community These layers may be organized in highly co dependent
 relationships that include reliability validity human judgment and errors and the uses and interpretations of the various types
 of assessment No one could reasonably argue that the principles and complexities of educational assessment should be core
 learning in public education but there is a growing realization that trust in the UK assessment system is under some threat as
 the media and others sensationalize or politicize any problems that arise each year This book offers the first comprehensive
 overview of how the general public is considered to perceive and understand a wide variety of aspects of educational
 assessment and how this understanding may be improved This book was originally published as a special issue of the Oxford
