Simopoulos, 1991 **Handbook of Lipids in Human Nutrition** Gene A. Spiller, 2020-08-11 The Handbook of Lipids in Human Nutrition is a concise reference for professionals and students interested in the role of lipids in nutrition Over 100 tables and illustrations provide quick access to the most current data available **Functional Foods I.** Goldberg, 2012-12-06 Accuse not Nature She has done her part Do Thou but Thine Milton Paradise Lost 1667 The concept that nature imparted to foods a health giving and curative function is not new Herbal teas and remedies have been used for centuries and continue in use in many parts of the world today In modern society we have turned to drugs to treat mitigate or prevent diseases However since the discovery of nutrients and our increasing analytical capabilities at the molecular level we are beginning to become more knowledgeable of the biochemical structure function relationship of the myriad of chemicals that occur naturally in foods and their effect on the human body The holistic approach to medicine and diet that began in the 1970s has now seen a renewal as we realize that certain foods because of the presence of specific biochemicals can have a positive impact on an individual's health physical well being and mental state In fact because of the negative image of drugs and the grey area of supplements the use of foods that are functional is becoming a growth area for the food industry In Japan this concept has led to one of the largest growing markets where they have defined functional foods as regular foods derived only from naturally occurring ingredients The Japanese further require that the functional foods be consumed as part of the diet and not in supplement form i e **Omega-6/Omega-3 Essential Fatty Acid Ratio:**

The Scientific Evidence A. P. Simopoulos, L. G. Cleland, Berthold Koletzko, 2003-07 Studies on the evolutionary aspects of diet and molecular studies included in this volume indicate that human beings evolved on a diet that was balanced in the essential fatty acids EFA In fact the ratio of omega 6 omega 3 EFA was 1:1 whereas present day diets in both developed and developing countries have a much higher ratio between 5:1 and 50:1 Additional studies show that a high ratio of omega 6 omega 3 EFA is detrimental to health and may lead to the development of chronic diseases Improving the dietary ratio by decreasing the omega 6 fatty acids and increasing the omega 3 fatty acids is essential for brain function and for the management of cardiovascular disease arthritis and cancer A ratio of 4:1 or less leads to lower dosage and to the reduction of adverse effects of drugs This volume should be of interest to a large and varied audience of researchers in academia industry and government cardiologists geneticists immunologists neuroscientists and cancer specialists as well as nutritionists dietitians food scientists agriculturists economists and regulators

Omega-3 Fatty Acids and Health Joyce A. Nettleton, 2012-12-06 The evidence that omega 3 fatty acids are essential for human development and most helpful to achieve good health throughout life is clearly documented by Dr Joyce Nettleton in her new book Omega 3 Fatty Acids and Health Omega 3 fatty acids are produced by the plants of the land and sea The tissues of the body require the omega 3 fatty acids for their proper functioning just as they also need the omega 6 essential fatty acids It is probable in man's evolutionary development that there has always been the proper balance between these two groups of essential fatty acids but in the modern era with the provision of inexpensive vegetable oils it is possible that the pendulum for increased dietary omega 6 fatty acids in the form of linoleic acid has swung too far and the intake of omega 3 fatty acids has actually declined In particular the 22 carbon omega 3 fatty acid docosahexaenoic acid which has six double bonds is important in the membranes of brain cells heart muscle cells the rods and cones of the retina and spermatozoa Docosahexaenoic acid is found only in foods such as fish and other sea life having been synthesized by the phytoplankton of the waters An outright deficiency of omega 3 fatty acids has led to a number of disturbances in animals and human infants such as impaired vision abnormalities of the electroretinogram of the eye and various behavioral aberrations
