

4. RECOMMENDED ACTIONS TO BE TAKEN FOR FUTURE ENHANCEMENTS

By Evaluating your organization's capability to bring together patient engagement efforts onto a single platform, including change management that would need to occur. Work more on to identify and track patient activity, evaluate programs, and make recommendations on the next best action at the heart of successful patient engagement and work with existing patient engagement vendors to determine their ability today or accept the near future to provide a single platform for patient engagement and evaluate your organization's cultural ability to accept machine learning algorithms as a technology to help guide patients through their healthcare journey. It is more and more important that data from numerous sources including Biometrics technologies such as fingerprint scanners, facial recognition tech, pulse rate readers, iris scanners and others should be incorporated, for the identification of patients and employees. Also we can evaluate a patient's progress across intervention programs as well as evaluate the effectiveness of the programs themselves through analytics. Digital patient engagement vendors are embedding machine learning into their products to engage patients in the conversation. Care managers can also engage patients in a conversation manually. The use of machine learning algorithms improves the granularity of a patient's profile and can also learn and understand how similar patients have medically treated from and can determine how to effectively communicate with a patient to generate optimal outcomes. Modern Algorithms are made to learn patient's answer to a question and serve up the either additional questions or make recommendations on next best actions. These applications are enabling bidirectional communication through scripted algorithms and alerts that may go to a care manager and then will initiate further conversation either through the application or another channel such as a Phone call.

Table1. Proposed actions and barriers for Patient Engagement Implementation.

5. CONCLUSION

This deals with the utilization of modern technologies to implement successful patient engagement. Today's Healthcare system facing issues to achieve the requirements of patients as it troubles in continuity and personalization and Clinical outcomes is achievable for healthcare sector's nowadays. Successful patient engagement will be possible if modern technologies must be implemented efficiently and it's widely known that it has constraints in functionality and fragmentation. So, new ideas of patients engagement is becoming a reality, which will engage patients in their health because of which they can learn modern strategies that provides better results in what is needed. Healthcare organizations have the possibility to adopt patient engagement platforms, and to create great patient experience that both improves patient satisfaction and contribution towards clinical outcomes.
