**Should You Die?** Augusto T. S. Cruz, Living healthily for centuries is no longer a sci fi prospect It is very likely that the first person to live to 200 years in good health is already alive scientific and technological advances of today are starting to produce medicines and treatments which tackle aging directly The true debate is no longer about whether we can extend our lives and fight death it is about whether we should If advances in medicine and engineering protect you and others from aging diseases injuries and accidents allowing you to live as a healthy 25 year old for as long as you wanted where death could only visit you if and when you wished should you say yes to this future And what happens if enough people say yes Will overpopulation be inevitable Will we lose our identity as humans by relinquishing mortality Will humanity be challenging the natural and divine order Will we grow lazy and complacent Will the divide between the rich and poor grow Or is overcoming aging and disease a mandate of medicine and a moral imperative to aim for Perhaps even our destiny as humans In the same way push back on hunger pestilence and violence should we end the cycle of suffering and death which aging brings to us all In *Should You Die* Augusto T S Cruz weighs in on these questions The author methodically picks apart arguments supporting each side of the debate highlighting their strengths and weaknesses making the book an excellent primer for those interested in the discussion and a helpful guide for those already involved
