Music and Schema Theory Marc Leman, 2012-12-06 Music is an important domain of application for schema theory The perceptual structures for pitch and timbre have been mapped via schemata with results that have contributed to a better understanding of music perception Yet we still need to know how a schema comes into existence or how it functions in a particular perception task This book provides a foundation for the understanding of the emergence and functionality of schemata by means of computer based simulations of tone center perception It is about how memory structures self organize and how they use contextual information to guide perception

A Mark of the Mental Karen Neander, 2017-06-16 Drawing on insights from causal theories of reference teleosemantics and state space semantics a theory of naturalized mental representation In A Mark of the Mental Karen Neander considers the representational power of mental states described by the cognitive scientist Zenon Pylyshyn as the second hardest puzzle of philosophy of mind the first being consciousness The puzzle at the heart of the book is sometimes called the problem of mental content Brentano's problem or the problem of intentionality Its motivating mystery is how neurobiological states can have semantic properties such as meaning or reference Neander proposes a naturalistic account for sensory perceptual nonconceptual representations Neander draws on insights from state space semantics which appeals to relations of second order similarity between representing and represented domains causal theories of reference which claim the reference relation is a causal one and teleosemantic theories which claim that semantic norms at their simplest depend on functional norms She proposes and defends an intuitive theoretically well motivated but highly controversial thesis sensory perceptual systems have the function to produce inner state changes that are the analogs of as well as caused by their referents Neander shows that the three main elements functions causal information relations and relations of second order similarity complement rather than conflict with each other After developing an argument for teleosemantics by examining the nature of explanation in the mind and brain sciences she develops a theory of mental content and defends it against six main content determinacy challenges to a naturalized semantics

Music as an Art Roger Scruton, 2018-08-23 In the latest of his books exploring a lifetime's passion for music bestselling author and philosopher Roger Scruton brings his immense critical faculties to bear on a panoply of different musical genres both contemporary and classical Music as an Art begins by examining music through a philosophical lens engaging in discussions about tonality music and the moral life music and cognitive science and German idealism as well as recalling the author's struggle to encourage his students to distinguish the qualities of good music Scruton then explains via erudite chapters on Schubert Britten Rameau opera and film how we can develop greater judgement in music recognising both good taste and bad establishing musical values as well as musical pleasures As Scruton argues in this book in earlier times our musical culture had secure foundations in the church the concert hall and the home in the ceremonies and celebrations of ordinary life religion and manners Yet we no longer live in that world Fewer people now play instruments and music is for many a form of largely solitary enjoyment As he shows in Music as an Art we live at a critical time for classical music and this book is an important contribution to the debate of which we stand in need concerning the place of music in Western civilization
