reduction of ventricular haemodynamic performance Although this guidance is based on statistical results of previously conducted randomized clinical trials available experience shows that it does not serve clinical needs efficiently The majority of patients who are implanted with ICDs for prophylactic reasons never utilize the device during its technical longevity whilst at the same time many patients who succumb to sudden cardiac death do not have ventricular haemodynamic performance particularly compromised Recent results also showed that the previous statistical findings of ICD efficacy are not fully reproducible in patients with non ischemic heart disease and that the reduction of sudden cardiac death after myocardial infarction by external automatic defibrillation vests is lower than expected Advances in cardiac electrophysiology are needed for better understanding of the mechanisms that are the basis of different arrhythmic abnormalities Increased understanding of these mechanisms will allow them to be more effectively classified so that optimum therapeutic options can be offered Likewise better understanding of the underlying electrophysiology processes is needed so that novel and more focused randomized clinical trials can be designed Compared to invasive electrophysiological studies noninvasive cardiac electrophysiology offers the possibility of screening larger number of patients as well as healthy subjects investigated under different provocations and conditions To advance the field broad spectrum of studies is needed together with meta analyses and reviews facilitating research interactions

Rowan, 2011-12-09 *Whispers of a Heart from the Other Side* is an amazing story about a girl named Betsabe who made contact with her closest family and friends after she left her earthly life unexpectedly. Author Maria Rosario Rowan has since been visited by her departed niece and an accompanying spirit of light daily for several months to share beautiful messages that reveal truth about life here on earth and in the hereafter. *Our Racist Heart?* Geoffrey Beattie, 2013-05-07 Few people today would admit to being a racist or to making assumptions about individuals based on their skin colour or on their gender or social class. In this book leading psychologist Geoffrey Beattie asks if prejudice more subtle than before is still a major part of our everyday lives. Beattie suggests that implicit biases based around race are not just found in small sections of our society but that they also exist in the psyches of even the most liberal educated and fair minded of us. More importantly the book outlines how these hidden attitudes and prejudices can be revealed and measured and how they in turn predict behaviours in a number of important social situations. *Our Racist Heart* takes a fresh look at our racial attitudes using new technology and experimental approaches to show how unconscious biases influence our everyday actions and thinking. These groundbreaking results are brought to life using the author's own experiences of class and religious prejudice in Northern Ireland and are also discussed in relation to the history of race racism and social psychological theory. *Introduction*, 1858
