consequences for human and natural systems and societal responses to them in the form of adaptation and mitigation actions. It advocates for recognizing the heatwave imperative and emphasizes that heatwaves matter. Together the individual chapters make the point that knowing heatwaves from a holistic interdisciplinary perspective will assist with efforts towards heatwave risk reduction and building resilience to what is probably the most pervasive of a range of climate hazards. The book will be of interest to upper level undergraduate and taught postgraduate students and researchers in geography, climatology, environmental, atmospheric and population health sciences as well as climate and health researchers, urban planners, policy makers and the informed public with an interest in climate and society issues.

Climate Change and Public Health Barry S. Levy, Jonathan Patz, 2015. Climate change is causing and will increasingly cause a wide range of adverse health effects including heat related disorders, infectious diseases, respiratory and allergic disorders, malnutrition, mental health problems and violence. The scientific bases for the associations between climate change and health problems are evolving as are the strategies for adapting to climate change and mitigating the greenhouse gases which are its primary cause. With contributions from 78 leading experts in climate change and in public health, this book contains a concise and comprehensive book that represents a core curriculum on climate change and public health including key strategies for adaptation and mitigation. Written primarily for students and mid career professionals in public health and environmental sciences, the book clearly describes concepts and their application to the health impacts of climate change. Chapters are supplemented with case studies, graphs, tables and photographs. The book's organization in 15 chapters makes it an ideal textbook for graduate and undergraduate courses in public health, environmental sciences, public policy and other fields.
