Modern Concepts of Acute and Chronic Hepatitis G. Gitnick,2012-12-06 The literature of medicine continues to expand at a remarkable pace The number of papers and monographs published has increased dramatically in the past five years Nowhere has this increase been as dramatic as in the field of acute and chronic hepatitis Why then should there be still another book Despite the sheer volume of words published it is still difficult to find in anyone volume a compilation of all of the most significant work Most mono graphs have considered either chronic or acute hepatitis not both Few works have addressed both the clinician and the basic scientist This book addresses both of these audiences and considers both of these diseases It was designed to provide an authoritative but concise assessment of our changing concepts of acute and chronic hepatitis It covers what is currently known and based on the most convincing research believed about these diseases To fulfill this ambitious goal only authors with international reputations in their fields of expertise were invited to contribute In the evolution of our current thoughts on the pathogenesis and manage ment of acute and chronic hepatitis our ideas have changed several times This book presents the facts as they are known today and in areas where all the facts are not established presents the well founded opinions of those considered to be authorities The authors present established and usually confirmed data and do not deal extensively with areas of speculation or unconfirmed material Current Perspectives in Hepatology Leonard B. Drug-Induced Hepatotoxicity Ross Cameron, George Feuer, Felix de la Iglesia, 2012-12-06 The advances in science and medicine we are now experiencing are unprecedented and exciting Life expectancy is prolonged and quality of life is much improved We learn of fabulous new discoveries made at the bench or the bedside every week Many diseases have been totally eliminated others can be significantly improved by new therapeutic formulations Much of the success can be attributed to a better understanding of disease processes and the specific targeting of new and more effective medications As is the case in many areas of successful human endeavour there can be a downside In the case of drugs and chemicals it is their adverse effects which are of concern Of course every effort is made to devise medications that are safe and the need to elucidate and understand mechanisms are crucial yet adverse effects remain a problem They can be unpredictable and diverse Drugs have been shown to induce virtually the whole gamut of human liver pathology from acute fulminant hepatitis to chronic active hepatitis to cirrhosis and even malignancy Hence the possibility of adverse drug effects must be considered in the differential diagnosis of many patients with liver disease This is well recognized and is very important indeed removal of the offending agent can often lead to reversal of the adverse effect This is an area of hepatology where we can really make a difference
