Gis Processing Of Geocoded Satellite Data:

GIS Processing Geocoded Satellite Images Jonathan Williams, 2001-09-15 This work opens with the basic techniques of satellite geocoding including the use of GPS and mosaic production before describing a wide range of algorithms for extraction of information from optical and radar satellite images It then moves on to address the derivation of topographic information from space including the Shuttle Topographic Radar Mission followed by an explanation of the added value obtained through the integrated use of geocoded satellite data in a geographic information system GIS Practical commercial and scientific applications are described in detail first looking at land applications such as agriculture and civil engineering and then at the oceanographic atmospheric and cryospheric worlds Jonathan Williams reviews developments in environmental monitoring and global security such as hazard and disaster monitoring population dynamics and space missions dedicated to environmental monitoring such as the Earth Observing System and the European ENVISAT Mission

Evidence from Earth Observation Satellites Ray Purdy, Denise Leung, 2012-11-21 Satellite technologies are rapidly improving offering increased opportunities for monitoring laws and using images as evidence in court Evidence from Earth Observation Satellites analyses whether data from satellite technologies can be a legally reliable effective evidential tool in contemporary legal systems This unique interdisciplinary volume brings together leading experts from academia government international institutions industry and judiciary to consider many emerging issues surrounding the use of these technologies in legal strategies Issues examined include the opportunities arising from technological developments existing regulatory applications and operational experiences and admissibility in courts and tools for ensuring the integrity of evidence It also examines privacy impacts under existing legislation and provides a new conceptual framework for debating the acceptability of such surveillance methods

Geographic Information From Space Jonathan Williams, 1995-08-14 A comprehensive study of a revolutionary information gathering system with applications in fields as diverse as forestry and urban development Addressing both the emerging technologies for gathering such data and its many applications the book discusses the basic problems inherent in transforming satellite data into a precise geographic reference system geocoding and goes on to review the useful geographic information that can be derived from such geocoded information
