Abstract

The educational sector in Europe is oriented to a process of radical restructuring with the aim of obtaining integration among degrees, a better education quality and more chances to improve and update the knowledge. This article introduces a virtual learning method (WINDS) for technical studies through the usage of the new technologies. WINDS-Web based intelligent design system is the result of a RT&D Project from the IST Fifth Framework Work Programme with the aim to reform education by developing new curricular and pedagogical models. Experiences gained during the experimentation phase on a real world university teaching scenario are also reported in this paper. First results encourage involving this learning methodology to the current University studies. In developing countries with reduced resources Virtual Learning Systems offer an opportunity but, at the same time, they need an investment in the technical and administrative infrastructure.

Teaching/learning strategies, virtual university, WINDS.

INTRODUCTION

The main objective of WINDS (Web-based Intelligent Design and Tutoring System) project was to contribute to the reorganization of the pedagogical, cultural and functional aspects of design education at the university level. WINDS project was oriented to fulfil the requirements of Flexible University, defining new approaches to design teaching, implementing flexible learning services for university education and constructing large scale experiments in order to promote cultural integration.

WINDS project has developed a networked design tutoring environment which provides the typical university's educational resources like administration office, courses, teachers, reviews, co-operation, libraries and so on. The system gives access to services through the Internet by means of shared instruments, web-browsers and commercial CAD systems. It promotes co-operation between students (peer tutoring) and between students and teachers (remote tutoring) by means of groupware tools [Fitzgerald 1985]. The system can also autonomously assist students during design courses by

Development History Of Ancient Chinese Glass Technology, 2021-02-04 Worldwide research on ancient glass began in the early 20th century A consensus has been reached in the community of Archaeology that the first manmade or synthetic glasses based on archaeological findings originated in the Middle East during the 5000-3000 s BC By contrast the manufacturing technology of pottery and ceramics were well developed in ancient China The earliest pottery and ceramics dates back to the Shang Dynasty the Zhou Dynasty 1700 BC-770 BC while the earliest ancient glass artifacts unearthed in China dates back to the Western Han Dynasty Utilizing the state of the art analytical and spectroscopic methods the recent findings demonstrate that China had already developed its own glassmaking technology at latest since 200 BC There are two schools of viewpoint on the origin of ancient Chinese glass The more common one believes that ancient Chinese glass originated from the import of glassmaking technology from the West as a result of Sino-West trade exchanges in the Western Han Dynasty 206 BC-25 AD The other scientifically demonstrates that homemade ancient Chinese glass with unique domestic formula containing both PbO and BaO were made as early as in the Pre-Qin Period or even the Warring States Period 770 BC-221 BC known as Yousha or Faience This English version of the previously published Chinese book entitled Development History of Ancient Chinese Glass Technology is for universities and research institutes where various research and educational activities of ancient glass and history are conducted With 18 chapters the scope of this book covers very detailed information on scientifically based findings of ancient Chinese glass development and imports and influence of foreign glass products as well as influence of the foreign glass manufacturing processes through the trade exchanges along the Silk Road s
