Developments in fiber-reinforced polymer (FRP) composites for civil engineering D. Lau,2013-05-15 Fiber reinforced polymer FRP has been a practical alternative construction material for replacing steel in the construction industry for several decades However some mechanical weaknesses of FRP are still unresolved which limit the extensive use of this material in civil infrastructure In order to mitigate the disadvantage of using FRP the concept of hybridization is delivered here The advantages of hybrid structural systems include the cost effectiveness and the ability to optimize the cross section based on material properties of each constituent material In this chapter two major applications of hybrid FRP composites are discussed 1 the internal reinforcement in reinforced concrete RC structures and 2 the cables in long span cable stayed bridges In order to improve the flexural ductility of FRP reinforced concrete FRPRC beam the additional steel longitudinal reinforcement is proposed such that the hybrid FRPRC beams contain both FRP and steel reinforcement In order to improve the vibrational problem in pure FRP cables used in bridge construction an innovative hybrid FRP cable which can inherently incorporate a smart damper is proposed The objective of this chapter is to deliver an up to date review of hybrid FRP composite structures including both the industrial practice and the research in academia The advantages of using hybrid FRP composites for construction will also be described with experimental support It is hoped that the reader will appreciate the concept of hybridization which leads to the efficient utilization of all constituent materials in a bonded system

Developments in Fiber-Reinforced Polymer (FRP) Composites for Civil Engineering Nasim Uddin,2013-05-15 The use of fiber reinforced polymer FRP composite materials has had a dramatic impact on civil engineering techniques over the past three decades FRPs are an ideal material for structural applications where high strength to weight and stiffness to weight ratios are required Developments in fiber reinforced polymer FRP composites for civil engineering outlines the latest developments in fiber reinforced polymer FRP composites and their applications in civil engineering Part one outlines the general developments of fiber reinforced polymer FRP use reviewing recent advancements in the design and processing techniques of composite materials Part two outlines particular types of fiber reinforced polymers and covers their use in a wide range of civil engineering and structural applications including their use in disaster resistant buildings strengthening steel structures and bridge superstructures With its distinguished editor and international team of contributors Developments in fiber reinforced polymer FRP composites for civil engineering is an essential text for researchers and engineers in the field of civil engineering and industries such as bridge and building construction Outlines the latest developments in fiber reinforced polymer composites and their applications in civil engineering Reviews recent advancements in the design and processing
