Geometry of

Cauchy-Riemann Submanifolds Sorin Dragomir, Mohammad Hasan Shahid, Falleh R. Al-Solamy, 2016-05-31 This book gathers contributions by respected experts on the theory of isometric immersions between Riemannian manifolds and focuses on the geometry of CR structures on submanifolds in Hermitian manifolds CR structures are a bundle theoretic recast of the tangential Cauchy Riemann equations in complex analysis involving several complex variables The book covers a wide range of topics such as Sasakian geometry Kaehler and locally conformal Kaehler geometry the tangential CR equations Lorentzian geometry holomorphic statistical manifolds and paraquaternionic CR submanifolds Intended as a tribute to Professor Aurel Bejancu who discovered the notion of a CR submanifold of a Hermitian manifold in 1978 the book provides an up to date overview of several topics in the geometry of CR submanifolds Presenting detailed information on the most recent advances in the area it represents a useful resource for mathematicians and physicists alike Global and Stochastic Analysis with Applications to Mathematical Physics Yuri E. Gliklikh, 2010-12-07 Methods of global analysis and stochastic analysis are most often applied in mathematical physics as separate entities thus forming important directions in the field However while combination of the two subject areas is rare it is fundamental for the consideration of a broader class of problems This book develops methods of Global Analysis and Stochastic Analysis such that their combination allows one to have a more or less common treatment for areas of mathematical physics that traditionally are considered as divergent and requiring different methods of investigation Global and Stochastic Analysis with Applications to Mathematical Physics covers branches of mathematics that are currently absent in monograph form Through the demonstration of new topics of investigation and results both in traditional and more recent problems this book offers a fresh perspective on ordinary and stochastic differential equations and inclusions in particular given in terms of Nelson's mean derivatives on linear spaces and manifolds Topics covered include classical mechanics on non linear configuration spaces problems of statistical and quantum physics and hydrodynamics A self contained book that provides a large amount of preliminary material and recent results which will serve to be a useful introduction to the subject and a valuable resource for further research It will appeal to researchers graduate and PhD students working in global analysis stochastic analysis and mathematical physics Departments of Veterans Affairs and Housing and Urban Development, and Independent Agencies Appropriations for 1995: Testimony of members of Congress and other interested individuals and organizations United States. Congress. House. Committee on Appropriations. Subcommittee on VA, HUD, and Independent Agencies, 1994 *Morse Theoretic Aspects of p -Laplacian Type Operators* Kanishka Perera, Ravi P. Agarwal, Donal O'Regan, 2010 Presents a Morse theoretic study of a very general class of homogeneous operators that includes the p Laplacian as a special case The p Laplacian operator is a quasilinear differential operator that arises in many applications such as non Newtonian fluid flows Working with a new sequence of eigenvalues that uses the cohomological index the authors systematically develop alternative tools such as nonlinear linking and local splitting theories in order to effectively apply Morse theory to quasilinear problems Progress In Nonlinear

Analysis - Proceedings Of The Second International Conference On Nonlinear Analysis Kung-ching Chang, Yiming Long, 2000-07-24 The real world is complicated as a result of which most mathematical models arising from mechanics physics chemistry and biology are nonlinear Based on the efforts of scientists in the 20th century especially in the last three decades topological variational geometrical and other methods have developed rapidly in nonlinear analysis which made direct studies of nonlinear models possible in many cases and provided global information on nonlinear problems which was not available by the traditional linearization method This volume reflects that rapid development in many areas of nonlinear analysis

Finslerian Geometries P.L. Antonelli, 2012-12-06 The International Conference on Finsler and Lagrange Geometry and its Applications A Meeting of Minds took place August 13 20 1998 at the University of Alberta in Edmonton Canada The main objective of this meeting was to help acquaint North American geometers with the extensive modern literature on Finsler geometry and Lagrange geometry of the Japanese and European schools each with its own venerable history on the one hand and to communicate recent advances in stochastic theory and Hodge theory for Finsler manifolds by the younger North American school on the other The intent was to bring together practitioners of these schools of thought in a Canadian venue where there would be ample opportunity to exchange information and have cordial personal interactions The present set of refereed papers begins with the Pedagogical Section I where introductory and brief survey articles are presented one from the Japanese School and two from the European School Romania and Hungary These have been prepared for non experts with the intent of explaining basic points of view The Section III is the main body of work It is arranged in alphabetical order by author Section II gives a brief account of each of these contributions with a short reference list at the end More extensive references are given in the individual articles

Advances in Intelligent Systems and Interactive Applications Fatos Xhafa, Srikanta Patnaik, Madjid Tavana, 2019-11-16 This edited book is based on the research papers presented at the 4th International Conference on Intelligent Interactive Systems and Applications IISA2019 held on June 28-30, 2019 in Bangkok, Thailand. Interactive intelligent systems (IIS) are systems that interact with human beings, media or virtual agents in intelligent computing environments. This book explores how novel interactive systems can intelligently address various challenges and also limitations previously encountered by human beings using different machine learning algorithms and analyzes recent trends. The book includes contributions from diverse areas of IIS here categorized into seven sections: namely i) Intelligent Systems ii) Autonomous Systems iii) Pattern Recognition and Computer Vision iv) Enabled Systems v) Internet vi) Mobile and vii) Various Applications. It not only presents theoretical knowledge on the intelligent and interactive systems but also discusses various applications pertaining to different domains.

Topics in Critical Point Theory Kanishka Perera, Martin Schechter, 2012-11-01 This book introduces the reader to powerful methods of critical point theory and details successful contemporary approaches to many problems, some of which had proved resistant to attack by older methods. Topics covered include Morse theory, critical groups, the minimax principle, various notions of linking, jumping nonlinearities and the Fučík spectrum in an abstract setting, sandwich pairs and the cohomological index. Applications to semilinear elliptic boundary value problems, p-Laplacian problems and anisotropic systems are given. Written for graduate students and research scientists, the book includes numerous examples and presents more recent developments in the subject to bring the reader up to date with the latest research.
