Joint Sessions of Workshops, 2009 We know much more about the global politics of intellectual property than we do about national political contests over the ownership of knowledge Haunss and Shadlen have identified this gap in the literature and have done a fine job of bringing together a set of essays that helps to fill this gap in our understanding of the multi layered nature of intellectual property politics Peter Drahos The Australian National University Canberra This thought provoking volume provides invaluable new insights and is a major contribution to the debate on the politics of intellectual property rights Duncan Matthews Queen Mary University of London UK This book offers empirical analyses of conflicts over the ownership control and use of knowledge and information in developed and developing countries Sebastian Haunss and Kenneth C Shadlen along with a collection of eminent contributors focus on how business organizations farmers social movements legal communities state officials transnational enterprises and international organizations shape IP policies in areas such as health information communication technologies indigenous knowledge genetic resources and many others The innovative and original chapters examine conflicts over the rules governing various dimensions of IP including patents copyrights traditional knowledge and biosafety regulations Written from a political perspective this book is a must read for political scientists sociologists and anthropologists who study IP and conflicts over property It is also an essential read for stakeholders in institutions NGOs and industry interested in knowledge governance and IP politics **A Critical Guide to Intellectual Property** Mat Callahan, Jim Rogers, 2017-10-15 Ours is an era when human genes can be copied and patented From genetically modified foods to digital piracy the concept of intellectual property IP and the laws upholding it play a foundational role in our society but its political and ideological dimensions have rarely been understood outside of specialist circles This collection cuts through the legal jargon that so often surrounds IP to provide both a comprehensive history and analysis that explores the corporate interests that shape its conception and the movements that are developing alternatives As the nature of industry changes we might ask what are the wider implications of the concept of IP be it for agribusiness and pharmaceutical companies or the film and music industries Has IP law has been used to safeguard and assert the ownership of ideas and creativity or is it an essential foundation of our culture Today with mounting challenges from the growth of free software and open source movements this collection provides an accessible and alternative guide to IP exploring its significance within the wider struggle between capital and the commons Providing Global Public Goods Inge Kaul, 2003 Publ for the United Nations Development Programme UNDP **Globalization, Privatization and Free Market Economy** C. Rao, 1998-06-25 The three dominant forces shaping societies and economies around the world are globalization privatization and liberalization Because these processes are interrelated they must be addressed collectively The contributors to the volume show that globalization privatization and liberalization are multidimensional phenomena that impact not only

the economic considerations of governments but also sociocultural and environmental aspects of societies The three phenomena also affect these units of analysis which Rao and his colleagues identify as regional country industrial and organizational The result is a cogent discussion of these powerful global forces for the academic community professionals in economic development banking finance international investment and global commerce After treating the conceptual issues of meaning definition and differing interpretations and perspectives the volume examines the historical experience with regional economic integration The flow of foreign direct investment a major consquence of globalization privatization and liberalization of economies is considered next This leads to a study of the challenges created for management at the microlevel in organizations such as the intensification of competitiveness and the increased importance of technology and technology management In their examination of country specific issues the contributors show how widely experiences vary with regard to the way in which the three major processes are implemented and how the policies behind them are adopted Finally in their discussion of sectoral and industry specific issues the contributors note that great variations on how different industrial sectors and industries will approach and recreate themselves under the power of the three great processes

Australia's Economy in Its International Context, Volume 2: 1956-2012 Kym Anderson, 2012 This two volume collection brings together the first 56 Joseph Fisher Lectures in economics and commerce presented at the Adelaide University every other year since 1904 Funds for the Lectures together with a medal for the top accounting student each year were kindly provided by a 1 000 endowment to the University by the prominent Adelaide businessman Joseph Fisher in 1903 The Lectures address a wide range of Australian economic issues in addition to some international economic issues of national significance They have stood the test of time extremely well while also providing a reminder of the events and concerns that were prominent at different times during the past century TRIPS plus 20 Hanns Ullrich, Reto M. Hilty, Matthias Lamping, Josef Drexl, 2016-01-29 This book examines the impact and shortcomings of the TRIPS Agreement which was signed in Marrakesh on 15 April 1994 Over the last 20 years the framework conditions have changed fundamentally New technologies have emerged markets have expanded beyond national borders some developing states have become global players the terms of international competition have changed and the intellectual property system faces increasing friction with public policies The contributions to this book inquire into whether the TRIPS Agreement should still be seen only as part of an international trade regulation or whether it needs to be understood or even reconceptualized as a framework regulation for the international protection of intellectual property The purpose therefore is not to define the terms of an outright revision of the TRIPS Agreement but rather to discuss the framework conditions for an interpretative evolution that could make the Agreement better suited to the expectations and needs of today s global economy **Constructing European Intellectual Property** Christophe Geiger, 2013 It is no longer possible to practice teach or study purely domestic intellectual property law within Europe European intellectual property norms now structure protection throughout the continent and

even beyond Paradoxically what might seem as a simplification of legal rules has created a maze of new complexities substantive institutional and methodological This collection by some of the leading scholars in European IP manages to capture that complexity without sacrificing clarity Canvassing the entire field with a rich array of contributions the book both highlights the roots of European IP law and asks important fundamental questions about where it is going One can only hope that it is read by anyone with a hand in the future development of European IP law Graeme B Dinwoodie University of Oxford UK Christophe Geiger has put together a very fine collection of essays by many of the very best scholars in European intellectual property law The essays explore the basis extent as well as the successes and failings of regional harmonization of trade marks geographical indications copyright designs patents and remedies The celebrated cast of authors naturally discuss in addition to the various directives and regulations on each topic the Treaty provisions on exhaustion of rights and competition and their interpretation relevant provisions on legislative competence Article 17 2 of the Charter other fundamental rights and the growing case law of the Court of Justice There is essential material here for anyone interested in European intellectual property law as well as ideas for the improvement and further development of European IP law Lionel Bently University of Cambridge UK Constructing European Intellectual Property offers a comprehensive assessment of the current state of intellectual property legislation in Europe and gives direction on how an improved system might be achieved This detailed study presents various perspectives on what further actions are necessary to provide the circumstances and tools for the construction of a truly balanced European intellectual property system The book takes as its starting point that the ultimate aim of such a system should be to ensure sustainable and innovation based economic growth while enhancing free circulation of ideas and cultural expressions Being the first in the European Intellectual Property Institutes Network EIPIN series this book lays down some concrete foundations for a deeper understanding of European intellectual property law and its complex interplay with other fields of jurisprudence as well as its impact on a broad array of spheres of social interaction In so doing it provides a well needed platform for further research Academics policymakers lawyers and many others concerned with establishment of a regulatory framework for intangibles in the EU will benefit from the extensive and thoughtful discussion presented in this work <u>Informal Norms in Global Governance</u> Wolfgang Hein, Suerie Moon, 2016-05-23 Hein and Moon take up a serious problem of contemporary global governance what can be done when international trade rules prevent the realization of basic human rights Starting in the 1990s intellectual property obligations in trade agreements required many developing countries to begin granting medicines patents which often rendered lifesaving drugs unaffordable At stake was the question of what priority would be given to health particularly of some of the world's poorest people and what priority to economic interests particularly those of the most powerful states and firms This book recounts the remarkable story of the access to medicines movement The authors offer an explanation for how the informal but powerful norm that every person should have access to essential medicines emerged after a decade of heated

political contestation and against long odds They also explore the stability and scope of the norm Finally the book examines the limitations of informal norms for protecting human rights and when renewed focus on changing formal norms is Knowledge in the Development of Economies Silvia Sacchetti, Roger Sugden, 2011-01-01 This book presents an entirely new approach to knowledge creativity and social organisation. The first part of the book provides a trenchant critique of current globalisation of multinational corporations the WTO and intellectual property rights The rest of the book outlines an alternative globalisation based on inclusion democratic participation and equality The role of the universities in this process is given special attention. The alternative globalisation is still based on the market economy but not necessarily one in which the sole objective of the corporations is to maximise profits The book is a must read for all economists including those who are satisfied with the current state of the subject The analyses of this volume of outstanding papers edited by Sacchetti and Sugden are fresh sober and entirely convincing Ajit Singh University of Cambridge UK It is arguable that at the root of the current global crisis lies the ferocious attack on critical thinking indeed freedom of thought that has taken place over the past 30 years or so The editors of this volume are among the minority voices that kept thinking outside the box and voicing their views during this period Their present volume offers fascinating readings on diverse issues ranging from uneven development through university and art management to motivation capabilities and democratic governance as they relate to knowledge and learning It is hoped that the book will receive the attention it deserves and that more such voices will now be raised and heard Christos Pitelis University of Cambridge UK While the relevance of knowledge in economic development represents a consolidated result this volume takes some important steps forward in new directions Highly valuable is the attempt to integrate the study of knowledge production with its potential for improved creativity whose expression is now dependent on the social structure and is not merely exogenous any more The focus on heterodox approaches and on non traditional organisational and proprietary forms is particularly coherent with both the theoretical premises of the volume and the expected evolution of economies Carlo Borzaga University of Trento Italy This is a collection of essays which escapes the confines of mainstream economics raising fundamental questions of the role of academics in policy making It requires the reader to imagine different worlds to think beyond present realities a book striving to deal with important issues not sliding over them to make cheap points A scholarly work demanding in places difficult but worth persevering with Should be read by everyone interested in a different way forward for economic development in a global world Keith Cowling University of Warwick UK This innovative book offers a critical perspective on the state of the current global economy making sense of knowledge related issues by critically assessing existing institutional choices as well as pointing to new ways forward The pioneering chapters reposition knowledge in a number of economic debates including regional development property rights social enterprises corporate governance the management of universities and the role of creative activities. They explore the possibility of an institutional dynamism that impacts not only on the characteristics of localities and their place in a

hierarchical and ordered system of relationships but on the nature of the system itself Conclusions point at the individual and collective dimensions of the knowledge discovery process suggesting a renewed approach to the assessment of economic choices This insightful book offers an original perspective on knowledge related issues and constitutes a valuable read for academics and postgraduate students in international business and economic competitiveness as well practitioners and policymakers who are interested in alternative analyses and methods for economic develop Intellectual Property Ordering beyond Borders Henning Grosse Ruse-Khan, Axel Metzger, 2022-10-13 During the past century intellectual property IP law has expanded within and beyond national borders The field of IP law was once a niche area concerning authors inventors and trademark owners Today IP law acts as a complex regime of instruments institutions and actors that negotiate overlapping diverging and occasionally competing public policies on a global scale As IP continues to expand beyond borders the instruments and tools utilised for its global protection rely on public international law as the common denominator and unifying frame Intellectual Property Ordering Beyond Borders provides an evaluation of the most pertinent public international law questions raised by this multidimensional expansion This comprehensive and far reaching volume tackles problems such as generalist approaches under the law of treaties custom and general principles interfaces between IP and other normative orders such as trade and investment and interdisciplinary accounts from the economic political and social science perspectives This title is also available as open access on Cambridge Core Biotechnology and the Challenge of Property Remigius N. Nwabueze, 2016-04-15 Biotechnology and the Challenge of Property addresses the question of how the advancement of property law is capable of controlling the interests generated by the engineering of human tissues Through a comparative consideration of non Western societies and industrialized cultures this book addresses the impact of modern biotechnology and its legal accommodation on the customary conduct and traditional beliefs which shape the lives of different communities Nwabueze provides an introduction to the legal regulation of the evolving uses of human tissues and its implications for traditional knowledge beliefs and cultures Biotechnology, Patents and Morality Sigrid Sterckx, 2017-11-01 This title was first published in 2000 This work documents an international and interdisciplinary workshop on the ethical aspects of the patenting of biotechnological inventions including genes plants and animals The public perception is discussed along with how these perceptions relate to ethical social and cultural factors The legal framework in Europe is laid out by several experts in the field of patent law and the situation in the US is also briefly described This edition also includes a general discussion of three important theories called upon to justify the patent system the natural rights argument the distributive justice argument and the utilitarian argument The chapter about the European Directive on the legal protection of biotechnological inventions has been updated A selection of provisions from the August 1997 draft as well as the final text of the Directive as adopted on 12 May 1998 are discussed and commented upon The patent provisions of the TRIP's Agreement the Agreement on Trade Related aspects of Intellectual Property rights concluded

in 1994 as an Annex to the Agreement Establishing the World Trade Organization are also discussed and criticized paying particular attention to the implications for biotechnology patents Finally the question is asked whether the developing countries stand to gain anything from TRIPs A look at the results of empirical research conducted by commentators on the economics of patenting reveals that the new patent regime may prove to entail significant costs for the developing countries This second edition also contains material on the EU Directive on biotechnology patents adopted in May 1998 justificatory theories of the patent system and the TRIP's agreement on Trade Related aspects of Intellectual Property rights concluded in the GATT WTO framework **Ethical Health Care** Patricia Illingworth, 2017-10-03 Offering a format that is significantly different than that offered by other books Ethical Health Care beings by asking what is meant by health and how it is achieved The book then proceeds to explore with care and context the nature of the relationship between patients and clinicians health care providers and the societies in which they inhabit and finally the relationship between the health care enterprise and the international community By emphasizing the ethical issues that arise in the broad quest to foster human health and appreciating that health is not primarily a function of medical interventions Ethical Health Care introduces students to problems such as the international distribution of pharmaceuticals and the dangers of reemerging infections To a far greater extent than is done traditionally Ethical Health Care provides an interdisciplinary perspective to bioethics relying Bulletin, 1990 heavily upon the teachings of economics law and public health
