**Ending Hunger in Our Lifetime** C. Ford Runge, Benjamin Senauer, Philip G. Pardey, Mark W. Rosegrant, 2003-07-08 At a time in history when conflict erupts daily in far flung corners of the world ending severe deprivation may be critical to global peace and stability Yet we are far from reaching the goal of reducing hunger by 2025 The authors of this book bring good news hunger can be banished in our lifetime They first distill what is already known about fighting hunger and then report on important new research findings and projections that show it can be done through new and renewed institutions scientific innovation global economics and investment and sustainable environmental practices Although the book encompasses a wide array of ideas arguments facts and figures it is not a dry academic text Anyone wanting a better understanding of poverty and hunger and how to end it will benefit from reading it *Food Security and Global Environmental Change* John Ingram, Polly Ericksen, Diana Liverman, 2012-07-26 Global environmental change GEC represents an immediate and unprecedented threat to the food security of hundreds of millions of people especially those who depend on small scale agriculture for their livelihoods As this book shows at the same time agriculture and related activities also contribute to GEC by for example intensifying greenhouse gas emissions and altering the land surface Responses aimed at adapting to GEC may have negative consequences for food security just as measures taken to increase food security may exacerbate GEC The authors show that this complex and dynamic relationship between GEC and food security is also influenced by additional factors food systems are heavily influenced by socioeconomic conditions which in turn are affected by multiple processes such as macro level economic policies political conflicts and other important drivers The book provides a major accessible synthesis of the current state of knowledge and thinking on the relationships between GEC and food security Most other books addressing the subject concentrate on the links between climate change and agricultural production and do not extend to an analysis of the wider food system which underpins food security this book addresses the broader issues based on a novel food system concept and stressing the need for actions at a regional rather than just an international or local level It reviews new thinking which has emerged over the last decade analyses research methods for stakeholder engagement and for undertaking studies at the regional level and looks forward by reviewing a number of emerging hot topics in the food security GEC debate which help set new agendas for the research community at large Published with Earth System Science Partnership GECAFS and SCOPE **New Risks and Opportunities for Food Security** von Braun, Joachim, Rosegrant, Mark W., Pandya-Lorch, Rajul, Cohen, Marc J., Cline, Sarah A., Ashby Brown, Mary, Soledad Bos, María, 2005 References p 29 31 Feeding Tomorrow Ecologically David S-K. Ting, Jacqueline A. Stagner, 2025-09-08 Feeding Tomorrow Ecologically serves to support the top three SDGs No Poverty Zero Hunger and Good Health and Well Being Chapter authors delve into multifaceted aspects of global food systems providing a comprehensive overview of challenges and innovations in shaping the future of food production and sustainability A Sustainability Challenge National Research Council, Policy and Global

Affairs, Science and Technology for Sustainability Program, Committee on Food Security for All as a Sustainability Challenge, 2012-02-28 The National Research Council's Science and Technology for Sustainability Program hosted two workshops in 2011 addressing the sustainability challenges associated with food security for all. The first workshop, Measuring Food Insecurity and Assessing the Sustainability of Global Food Systems, explored the availability and quality of commonly used indicators for food security and malnutrition, poverty and natural resources, and agricultural productivity. It was organized around the three broad dimensions of sustainable food security: 1. availability, 2. access, and 3. utilization. The workshop reviewed the existing data to encourage action and identify knowledge gaps. The second workshop, Exploring Sustainable Solutions for Increasing Global Food Supplies, focused specifically on assuring the availability of adequate food supplies. How can food production be increased to meet the needs of a population expected to reach over 9 billion by 2050? Workshop objectives included identifying the major challenges and opportunities associated with achieving sustainable food security and identifying needed policy, science, and governance interventions. Workshop participants discussed long-term natural resource constraints, specifically water, land, and forests, soils, biodiversity, and fisheries. They also examined the role of knowledge, technology, modern production practices, and infrastructure in supporting expanded agricultural production and the significant risks to future productivity posed by climate change. This is a report of two workshops.

*Contemporary Famine Analysis* Olivier Rubin, 2015-12-11 This Brief provides some answers as to why famines continue to torment humankind here in the 21st century despite all our progress in food production, logistics, information dissemination, and relief work. Contemporary famines are inherently political, and so the interesting question is not how famines can be prevented but why they are allowed to develop in the first place. Only by understanding the latter is there hope to eradicate major famines. The Brief assesses the various analytical approaches to the understanding of famine, from the classical approaches inspired by Thomas Malthus to the newer economic approaches based on Amartya Sen. While all approaches contribute with important insights on famine dynamics, they also struggle to capture the political dimension of contemporary famines. The Brief develops a political approach capable of addressing this important but messy political dimension of contemporary famines. The approach builds on principles of humanitarian accountability, the moral responsibility to alleviate suffering from famine, as well as political accountability, the interests and power relations involved in famine outcomes.

Economics of Agricultural Development George W. Norton, Jeffrey Alwang, William A. Masters, 2014-09-25 *Economics of Agricultural Development* examines the causes, severity, and effects of poverty, population growth, and malnutrition in developing countries. It discusses potential solutions to these problems, progress made in many countries in recent years, and the implications of globalization for agriculture, poverty, and the environment. Topics covered in the book include: Means for utilizing agricultural surpluses to further overall economic development; The sustainability of the natural resource environment; Gender issues in relation to agriculture and resource use; The contribution of agricultural technologies; The importance of agricultural and

macroeconomic policies as related to development and trade and the successes and failures of such policies Actions to encourage more rapid agricultural and economic development The globalization of trade in goods services and capital has been fundamental to changes being experienced in the agricultural and rural sectors of developing countries It has major implications for the fight against poverty and food insecurity and for environmental sustainability Recently agriculture has returned to a position of center stage in the development dialog as food price volatility has increased along with water scarcity and concerns grow over the effects of climate change on food supply and food security This new edition of the essential textbook in the field builds on the 2010 edition and reflects the following developments Growth in foreign demand for land and other natural resources Significant progress in agricultural and economic development in some low income countries while others are being left behind Continued growth in demand for higher valued farm products This book is essential reading for undergraduate students seeking to understand the economics of agricultural development and the world food system including environmental and human consequences international trade and capital flows
