Endomorphisms Of Linear Algebraic Groups Number 80:

Endomorphisms of Linear Algebraic Groups Robert Steinberg,1968 **Algebraic Groups and Number Theory** Vladimir Platonov,Andrei Rapinchuk,Rachel Rowen,1993-12-07 This milestone work on the arithmetic theory of linear algebraic groups is now available in English for the first time Algebraic Groups and Number Theory provides the first systematic exposition in mathematical literature of the junction of group theory algebraic geometry and number theory The exposition of the topic is built on a synthesis of methods from algebraic geometry number theory analysis and topology and the result is a systematic overview ofalmost all of the major results of the arithmetic theory of algebraic groups obtained to date **The Classification of Finite Simple Groups** Michael Aschbacher,Richard Lyons ,Stephen D. Smith ,Ronald Solomon ,2011 Provides an outline and modern overview of the classification of the finite simple groups It primarily covers the even case where the main groups arising are Lie type matrix groups over a field of characteristic 2 The book thus completes a project begun by Daniel Gorenstein s 1983 book which outlined the classification of groups of noncharacteristic 2 type

Centres of Centralizers of Unipotent Elements in Simple Algebraic Groups Ross Lawther,Donna M. Testerman,2011 Let G be a simple algebraic group defined over an algebraically closed field k whose characteristic is either 0 or a good prime for G and let uEG be unipotent The authors study the centralizer CG u especially its centre Z CG u They calculate the Lie algebra of Z CG u in particular determining its dimension they prove a succession of theorems of increasing generality the last of which provides a formula for dim Z CG u in terms of the labelled diagram associated to the conjugacy class containing u

The Santa Cruz Conference on Finite Groups Bruce Cooperstein,Geoffrey Mason,1980 **Representations of Algebraic Groups, Quantum Groups, and Lie Algebras** Georgia Benkart,2006 Covers various aspects of the representation theory of Lie algebras finite groups of Lie types Hecke algebras and Lie super algebras This book outlines connections among irreducible representations of certain blocks of reduced enveloping algebras of semi simple Lie algebras in positive characteristic **The Arcata Conference on Representations of Finite Groups, Part 1** Paul Fong,1987 The papers in these proceedings of the 1986 Arcata Summer Institute bear witness to the extraordinarily vital and intense research in the representation theory of finite groups The confluence of diverse mathematical disciplines has brought forth work of great scope and depth Particularly striking is the influence of algebraic geometry and cohomology theory in the modular representation theory and the character theory of reductive groups over finite fields and in the general modular representation theory of finite groups The continuing developments in block theory and the general character theory of finite groups is noteworthy The expository and research aspects of the Summer Institute are well represented by these papers

Weil's Conjecture for Function Fields Dennis Gaitsgory,Jacob Lurie,2019-02-19 A central concern of number theory is the study of local to global principles which describe the behavior of a global field K in terms of the behavior of various completions of K This book looks at a specific example of a local to global principle Weil s conjecture on the Tamagawa

number of a semisimple algebraic group G over K In the case where K is the function field of an algebraic curve X this conjecture counts the number of G bundles on X global information in terms of the reduction of G at the points of X local information The goal of this book is to give a conceptual proof of Weil s conjecture based on the geometry of the moduli stack of G bundles Inspired by ideas from algebraic topology it introduces a theory of factorization homology in the setting l adic sheaves Using this theory Dennis Gaitsgory and Jacob Lurie articulate a different local to global principle a product formula that expresses the cohomology of the moduli stack of G bundles a global object as a tensor product of local factors Using a version of the Grothendieck Lefschetz trace formula Gaitsgory and Lurie show that this product formula implies Weil s conjecture The proof of the product formula will appear in a sequel volume **Characters of Finite Coxeter Groups and Iwahori-Hecke Algebras** Meinolf Geck,Götz Pfeiffer,2000 An important book The authors make full use of recent advances The book is both a valuable resource for the expert and good starting point for the beginning researcher in this field this is a very fine book which belongs on the shelves of anyone who is interested in the representation theory of Coxeter groups Iwahori Hecke algebras and more generally the groups of Lie type Zentralblatt MATH What makes the book especially valuable are the facts that the authors develop the various necessary theories nearly from the scratch and that they include the algorithmic theory as well Monatshefte f r Mathematick Written in an engaging and intelligible style well structured and clearly printed EMS It will be a valuable reference for many years to come Bulletin of the LMSFinite Coxeter groups and related structures arise naturally in several branches of mathematics for example Lie algebras or theory of knots and links This is the first book which develops the character theory of finite Coxeter groups and Iwahori Hecke algebras in a systematic way ranging from classical results to recent developments Representations of Finite Chevalley Groups George Lusztig,1978 Features notes that arose from a series of lectures given by the author at a CBMS Regional Conference held at Madison Wisconsin in August 1977 The purpose of the notes was to show how 1 adic cohomology of algebraic varieties over fields of characteristic p 1 can be used to get information on the representations of finite Chevalley groups **Coxeter Bialgebras** Marcelo Aguiar,Swapneel Mahajan,2022-11-17 The goal of this monograph is to develop Hopf theory in the setting of a real reflection arrangement The central notion is that of a Coxeter bialgebra which generalizes the classical notion of a connected graded Hopf algebra The authors also introduce the more structured notion of a Coxeter bimonoid and connect the two notions via a family of functors called Fock functors These generalize similar functors connecting Hopf monoids in the category of Joyal species and connected graded Hopf algebras This monograph opens a new chapter in Coxeter theory as well as in Hopf theory connecting the two It also relates fruitfully to many other areas of mathematics such as discrete geometry semigroup theory associative algebras algebraic Lie theory operads and category theory It is carefully written with effective use of tables diagrams pictures and summaries It will be of interest to students and researchers alike **Algebra IX** A.I. Kostrikin,I.R. Shafarevich,2013-04-17 The first contribution covers the theory of finite groups of Lie type

which is an important field of current mathematical research After giving the basic information Carter describes the Deligne Lusztig method of obtaining characters of these groups using l adic cohomology and subsequent work of Lusztig The second part by Platonov and Yanchevskii surveys the structure of finite dimensional division algebras and includes an account of reduced K theory   <u>Representations of Finite Dimensional Algebras and Related Topics in Lie Theory and Geometry</u> Vlastimil Dlab,Claus Michael Ringel,2004 These proceedings are from the Tenth International Conference on Representations of Algebras and Related Topics ICRA X held at The Fields Institute In addition to the traditional instructional workshop preceding the conference there were also workshops on Commutative Algebra Algebraic Geometry and Representation Theory Finite Dimensional Algebras Algebraic Groups and Lie Theory and Quantum Groups and Hall Algebras These workshops reflect the latest developments and the increasing interest in areas that are closely related to the representation theory of finite dimensional associative algebras Although these workshops were organized separately their topics are strongly interrelated The workshop on Commutative Algebra Algebraic Geometry and Representation Theory surveyed various recently established connections such as those pertaining to the classification of vector bundles or Cohen Macaulay modules over Noetherian rings coherent sheaves on curves or ideals in Weyl algebras In addition methods from algebraic geometry or commutative algebra relating to quiver representations and varieties of modules were presented The workshop on Finite Dimensional Algebras Algebraic Groups and Lie Theory surveyed developments in finite dimensional algebras and infinite dimensional Lie theory especially as the two areas interact and may have future interactions The workshop on Quantum Groups and Hall Algebras dealt with the different approaches of using the representation theory of quivers and species in order to construct quantum groups working either over finite fields or over the complex numbers In particular these proceedings contain a quite detailed outline of the use of perverse sheaves in order to obtain canonical bases The book is recommended for graduate students and researchers in algebra and geometry   **Representation Theories and Algebraic Geometry** A. Broer,2013-03-09 The 12 lectures presented in Representation Theories and Algebraic Geometry focus on the very rich and powerful interplay between algebraic geometry and the representation theories of various modern mathematical structures such as reductive groups quantum groups Hecke algebras restricted Lie algebras and their companions This interplay has been extensively exploited during recent years resulting in great progress in these representation theories Conversely a great stimulus has been given to the development of such geometric theories as D modules perverse sheafs and equivariant intersection cohomology The range of topics covered is wide from equivariant Chow groups decomposition classes and Schubert varieties multiplicity free actions convolution algebras standard monomial theory and canonical bases to annihilators of quantum Verma modules modular representation theory of Lie algebras and combinatorics of representation categories of Harish Chandra modules   *The B-Conjecture: Characterization of Chevalley Groups* John H. Walter,1986   <u>Lie Groups and Algebraic Groups</u> Arkadij L. Onishchik,Ernest B.

Vinberg,2012-12-06 This book is based on the notes of the authors seminar on algebraic and Lie groups held at the Department of Mechanics and Mathematics of Moscow University in 1967 68 Our guiding idea was to present in the most economic way the theory of semisimple Lie groups on the basis of the theory of algebraic groups Our main sources were A Borel s paper 34 C ChevalIey s seminar 14 seminar Sophus Lie 15 and monographs by C Chevalley 4 N Jacobson 9 and J P Serre 16 17 In preparing this book we have completely rearranged these notes and added two new chapters Lie groups and Real semisimple Lie groups Several traditional topics of Lie algebra theory however are left entirely disregarded e g universal enveloping algebras characters of linear representations and co homology of Lie algebras A distinctive feature of this book is that almost all the material is presented as a sequence of problems as it had been in the first draft of the seminar s notes We believe that solving these problems may help the reader to feel the seminar s atmosphere and master the theory Nevertheless all the non trivial ideas and sometimes solutions are contained in hints given at the end of each section The proofs of certain theorems which we consider more difficult are given directly in the main text The book also contains exercises the majority of which are an essential complement to the main contents *Etale Homotopy of Simplicial Schemes. (AM-104), Volume 104* Eric M. Friedlander,2016-03-02 This book presents a coherent account of the current status of etale homotopy theory a topological theory introduced into abstract algebraic geometry by M Artin and B Mazur Eric M Friedlander presents many of his own applications of this theory to algebraic topology finite Chevalley groups and algebraic geometry Of particular interest are the discussions concerning the Adams Conjecture K theories of finite fields and Poincare duality Because these applications have required repeated modifications of the original formulation of etale homotopy theory the author provides a new treatment of the foundations which is more general and more precise than previous versions One purpose of this book is to offer the basic techniques and results of etale homotopy theory to topologists and algebraic geometers who may then apply the theory in their own work With a view to such future applications the author has introduced a number of new constructions function complexes relative homology and cohomology generalized cohomology which have immediately proved applicable to algebraic K theory **Representations of Finite Groups of Lie Type** François Digne,Jean Michel,2020-03-05 An up to date and self contained introduction based on a graduate course taught at the University of Paris **Linear Algebraic Groups** James E. Humphreys,2012-12-06 James E Humphreys is presently Professor of Mathematics at the University of Massachusetts at Amherst Before this he held the posts of Assistant Professor of Mathematics at the University of Oregon and Associate Professor of Mathematics at New York University His main research interests include group theory and Lie algebras He graduated from Oberlin College in 1961 He did graduate work in philosophy and mathematics at Cornell University and later received hi Ph D from Yale University if 1966 In 1972 Springer Verlag published his first book Introduction to Lie Algebras and Representation Theory graduate Texts in Mathematics Vol 9 **The Subgroup Structure of the Finite Classical Groups** Peter B. Kleidman,Martin W. Liebeck,1990-04-26 With the

classification of the finite simple groups complete much work has gone into the study of maximal subgroups of almost simple groups In this volume the authors investigate the maximal subgroups of the finite classical groups and present research into these groups as well as proving many new results In particular the authors develop a unified treatment of the theory of the geometric subgroups of the classical groups introduced by Aschbacher and they answer the questions of maximality and conjugacy and obtain the precise shapes of these groups Both authors are experts in the field and the book will be of considerable value not only to group theorists but also to combinatorialists and geometers interested in these techniques and results Graduate students will find it a very readable introduction to the topic and it will bring them to the very forefront of research in group theory
