Lewis, 1985-10-07 Regulation of Endothelial Barrier Function Sarah Y. Yuan, Robert R. Rigor, 2011 The vascular endothelium lining the inner surface of blood vessels serves as the first interface for circulating blood components to interact with cells of the vascular wall and surrounding extravascular tissues In addition to regulating blood delivery and perfusion a major function of vascular endothelia especially those in exchange microvessels capillaries and postcapillary venules is to provide a semipermeable barrier that controls blood tissue exchange of fluids nutrients and metabolic wastes while preventing pathogens or harmful materials in the circulation from entering into tissues During host defense against infection or tissue injury endothelial barrier dysfunction occurs as a consequence as well as cause of inflammatory responses Plasma leakage disturbs fluid homeostasis and impairs tissue oxygenation a pathophysiological process contributing to multiple organ dysfunction associated with trauma infection metabolic disorder and other forms of disease In this book we provide an updated overview of microvascular endothelial barrier structure and function in health and disease The discussion is initiated with the basic physiological principles of fluid and solute transport across microvascular endothelium followed by detailed information on endothelial cell cell and cell matrix interactions and the experimental techniques that are employed to measure endothelial permeability Further discussion focuses on the signaling and molecular mechanisms of endothelial barrier responses to various stimulations or drugs as well as their relevance to several common clinical conditions Taken together this book provides a comprehensive analysis of microvascular endothelial cell and molecular pathophysiology Such information will assist scientists and clinicians in advanced basic and clinical research for improved health care Table of Contents Acknowledgments Introduction Structure and Function of Exchange Microvessels Methods for Measuring Permeability The Endothelial Barrier Signaling Mechanisms in the Regulation of Endothelial Permeability Endothelial Barrier Protectors Pathophysiology and Clinical Relevance Conclusion References **Microcirculation and Inflammation** K. Microcirculation and Inflammation K. Messmer, F. Hammersen, 1987 **Endothelial Cell Derived Microvesicles and Exosomes** Langni Liu, 2015 Extracellular vesicles are membrane derived vesicles exists in all organs The two major functioning extracellular vesicles are exosomes EXMs and microvesicles MVs EXMs released from cell membranes via exocytosis with size between 30 150 nm in diameter and MVs directly budded from plasma membrane and size between 100 1000 nm Ceramide is one of the most important factor in lipid mechanism for EXM release and also associated with MV release Ceramide generated from breakdown of sphingomyelin by neutral sphingomyelinase nSMase In this study we used an nSMase inhibitor GW4869 and an analogue of ceramide C6 ceramide to modulate the release of MVs and EXMs in human brain microvascular endothelial cells ECs and to test the effects of these modulations on EC proliferation microRNA126 miR

miR-126 expression and MV uptake ability and the interaction between EC derived MVs EXMs EC MVs EXMs with target cell human brain smooth muscle cells SMCs Endothelial cells were treated with GW4869 in 10 M and C6 ceramide in 10 M for 24 h MVs were isolated from by centrifuge and EXMs were isolated by centrifuge at 20 000 x g for 2 h and EXM were isolated by ultracentrifuge at 120 000 for 2 h with 100 nm filtration MVs and EXMs size and concentration were analyzed by Nanoparticle Tracking Analysis NTA technique Cell proliferation was detected by MTT The levels of miRNA126 expression in ECs and EC MVs EXMs were detected by qRT PCR MV uptake measured by fluorescent microscope Migration measured by wound healing method GW4869 significantly decreased EXM release and C6 ceramide significantly increased both MV and EXM release in ECs ECs treated with C6 ceramide and GW4869 had different miR 126 expression and MV uptake ability Modulated EC MVs EXMs had no effect on normal SMC proliferation and migration but EC EXMs under both release regulation decreased angiotensin II Ang II induced SMC migration independent of miR 126 level in EXMs Our data demonstrate that modulation of MV EXM via C6 ceramide and GW4869 could affects EC function and it s derived MVs EXMs function which may imply in vascular physiology and pathology
