*Energy Transfer Dynamics* Terence William Barrett, Herbert A. Pohl, 2012-12-06 On three occasions and at different locations conferences were held to honor the eightieth birthday of Professor Herbert Frohlich on the 18th December 1985 in Liverpool England on the 14th February 1986 in Stuttgart Germany and on the 8th March 1986 on the Palm Coast Florida This Festschrift is a compilation of the papers of those conferences Frohlich's choice of problems from the earliest days was couched in the physics of intrinsically interacting systems of excitation One example in which he set the course of research which is still followed concerned dielectric breakdown developed from the 1930s over several decades The interacting systems are the electrons receiving energy from an electric field and lattice atom motion taking energy from the electrons via electron phonon interaction hence heat dissipation There is a threshold field above which the latter cannot keep up with the former and the combined system electrons plus phonons runs away that is to say collectively it switches to a new state

**1955-1956** Wolfgang Pauli, 2008-05-10 Aus Paulis letztem Lebensjahrzehnt sind 41 Briefe erhalten und in diesem grundlegenden Werk zur Physikgeschichte der Nachkriegszeit zusammengefasst Neben der Physik wird hier auch der allgemeinere geistesgeschichtliche Hintergrund unserer Naturwissenschaft beleuchtet Dieser Teilband enthält wissenschaftliche Korrespondenz 41 Briefe grundlegende und andere allgemeine Fragen der Physik der Jahre 1955-1956 In diese Zeit fallen der Beginn der axiomatischen Feldtheorie die Anfänge von CERN der Berner Relativitätskongress zur 50 Jahr Feier von Einsteins Entdeckung sowie N Bohrs 70 Geburtstag und natürlich die frühe Geschichte des Neutrinos

Pauli und seine Briefpartner nehmen aktiv an diesen Ereignissen teil und beleuchten sie in eindrucksvoller Weise in ihrer Korrespondenz. Die reich annotierten und kommentierten Briefe sind chronologisch angeordnet und durch Verzeichnisse und Register erschlossen. From the final decade of Pauli's life nearly 2000 letters survive. These are collected in this fundamental work on the history of physics in the post-war era. Going beyond physics, these letters also shed light on the cultural and philosophical background of our natural sciences. This part of the collection contains scientific correspondence about fundamental and other general questions concerning physics in the years 1955-1956. This period saw the beginnings of axiomatic field theories, the birth of CERN, the Berner Relativity Congress marking the 50th Anniversary of Einstein's discovery, and Niels Bohr's 70th birthday. They were also the formative years of neutrino physics. Pauli and his correspondence partners played an active role in these events and illuminate them in an impressive manner in their letters. The extensively annotated and commented letters are organized chronologically and complemented by indexes and references.
