*Energy Policy Modeling in the 21st Century* Hassan Qudrat-Ullah, 2013-10-04 The roles and applications of various modeling approaches aimed at improving the usefulness of energy policy models in public decision making are covered by this book The development validation and applications of system dynamics and agent based models in service of energy policy design and assessment in the 21st century is a key focus A number of modeling approaches and models for energy policy with a particular focus on low carbon economic development of regions and states are covered Chapters on system dynamics methodology model based theory fuzzy system dynamics frame work and optimization modeling approach are presented along with several chapters on future research opportunities for the energy policy modeling community The use of model based analysis and scenarios in energy policy design and assessment has seen phenomenal growth during the past several decades In recent years renewed concerns about climate change and energy security have posed unique modeling challenges By utilizing the validation techniques and procedures which are effectively demonstrated in these contributions researchers and practitioners in energy systems domain can increase the appeal and acceptance of their policy models

**Energy and Environmental Policy Modeling** John Weyant, 1998-12-01 *Achieving a Sustainable Global Energy System* Leo Schrattenholzer, Asami Miketa, Keywan Riahi, Richard Alexander Roehrl, 2004-01-01 Sustainable development and global climate change have figured prominently in scientific analysis and international policymaking since the early 1990s This book

formulates technology strategies that will lead to environmentally sustainable energy systems *Energy and Environmental Policy Modeling* John Weyant, 1998-12-31 The primary objective of *Energy and Environmental Policy Modeling* is to introduce a variety of recent energy environmental modeling concepts and to provide an overview of these modeling concepts Another major objective of the book is the application of management science techniques to energy and environment policy issues which have expanded dramatically over the last twenty five years the results from these applications have become increasingly relied upon by those making energy and environmental decisions Thus an overview of some of the most interesting work in this field on some of the biggest contemporary policy issues is a worthy objective In this respect policy issues are discussed in the following conceptual modeling frameworks end use modeling integrating supply and demand aggregate energy economy interactions and multi sector energy economy interactions Hence the book begins with policy studies First there is a chapter on oil resource depletion and technological change by John Rowse Two articles on electric sector restructuring follow by William Hogan and Hung po Chao Stephen Peck The first section is followed by four chapters motivated by the debate over appropriate climate change policies one by Richard Richels Jae Edmonds Howard Gruenspecht and Tom Wigley on the implications of different carbon emission trajectories one by Stephen Peck and Thomas Telsberg on appropriate emissions trajectories under uncertainty one by Susan Swinehart on the potential of tree planting as a climate policy response and one by Gunter Stephan on inter generational discounting Finally the book ends with a chapter by Tom Rutherford on the sequence of linear complementarity problem technique for solving general equilibrium problems and one on the International Energy Network by Leo Schrattenholzer an institution managed jointly by Schrattenholzer and Alan Manne The work of Professor Alan Manne is heavily referenced in every chapter of this book Energy and Environment

Richard Loulou, Jean-Philippe Waaub, Georges Zaccour, 2005-12-05 *Energy and Environment* is a volume on energy and environmental modeling that describes a broad variety of modeling methodologies embodied in models of varying scopes and philosophies ranging from top down integrated assessment models to bottom up partial equilibrium models to hybrid models

Growth: Energy, the environment, and economic growth Dale Welden Jorgenson, 1998 **International Handbook on the Economics of Energy** Lester C. Hunt, Joanne Evans, 2011-01-01 As an essential component for economic growth energy has a significant impact on the global economy The need to meet growing energy demand has prompted cutting edge innovation in clean technology in an attempt to realise environmental and cost objectives whilst ensuring the security of energy supply This Handbook offers a comprehensive review of the economics of energy including contributions from a distinguished array of international specialists It provides a thorough discussion of the major research issues in this topical field of economics Themes addressed include the theory of energy supply demand and policy empirical modelling of energy demand holistic energy models an analysis of coal gas electricity oil and the markets within which they operate and a discussion of the current key energy policy issues The topics of pricing transmission regulation security energy efficiency

new technologies and climate change are also discussed The International Handbook on the Economics of Energy presents a comprehensive overview of the state of the art research making it an indispensable reference for researchers advanced students practitioners and policy makers alike *Empirical Studies of Environmental Policies in Europe* John W. Maxwell, Jürgen von Hagen, 2012-12-06 John W Maxwell and Jirgen von Hagen Kelley School of Business Indiana University ZEI University of Bonn Indiana University and CEPR Prior to the 1970 s economic studies of the natural environment were chiefly concerned with the optimal extraction of natural resources such as oil coal and timber This focus reflected the commonly held belief that the natural environmental was sufficient to sustain the world s population in relative comfort at least in developed nations and was there for the taking By the late 1960 s however the spectacular levels of economic growth that had taken place since the Second World War began to exact a visible toll on the natural environment This visibility prompted growing concern for the environment among activists government officials academics and the public This concern has followed a general upward though cyclic trend to the present day Remarkable events during this trend include the issuing of the Brundtland report and the world environmental summits held in Rio and Kyoto Concern for the natural environment has impacted the discipline of economics resulting in the birth of the field of environmental economics that has recently eclipsed in popularity its parent field of natural resource economics *Handbook of Environmental and Resource Economics* Jeroen C. J. M. Van den Bergh, 2002-01-01 This major reference book comprises specially commissioned surveys in environmental and resource economics written by an international team of experts Authoritative yet accessible each entry provides a state of the art summary of key areas that will be invaluable to researchers practitioners and advanced students

**Energy Economics** Yi-Ming Wei, Qiao-Mei Liang, Gang Wu, Hua Liao, 2019-09-23 This book sets out a systematic piece of research which attempts to assess the level of energy security in China investigate how national energy supply security might be improved and consider how energy trade risks might be reduced Modeling Practice and Mechanism Design of Green Energy Systems towards Sustainable Development Jianli Zhou, Lirong Liu, Meiheriayi Mutailipu, Shuai Geng, Shenbo Yang, Ting Zhang, 2025-03-12 The sustainable development of energy has become a global concern The energy system as an extremely important module for production conversion transmission and supply in the energy industry is facing pressure from deep decarbonization and green transformation The application of wind power photovoltaic hydrogen energy power to gas P2G technology carbon capture utilization and storage CCUS technology will help the energy system achieve the Sustainable Development Goals Hydrogen energy will become a bridge for various energy conversion promoting the high speed flow of green energy Therefore modeling practice and mechanism design for green energy systems will become a key area of academic research The full utilization and consumption of renewable energy generation e.g. wind and photovoltaic still face difficulties and challenges especially the problem of full consumption The development and layout of multi energy complementarity coupling and interaction and collaborative integrated energy systems can effectively solve the above

problems Therefore there is an urgent need to study the mechanism planning and design optimized operation development mode carbon emission reduction energy policies and trading mechanisms of integrated energy systems coupled with renewable energy generation and hydrogen energy to promote its further development and help achieve a clean and sustainable future This field will integrate the knowledge and methodology from energy science power electronics management science and economics

*The Swedish Nuclear Dilemma* William D. Nordhaus, 2014-04-04 Renowned economist William Nordhaus has developed many innovative approaches for analyzing complex environmental questions He applies them to the possible phaseout of nuclear power in Sweden in *The Swedish Nuclear Dilemma* Energy and the Environment While making a major contribution to that debate this book has value that extends well beyond the Swedish issue to the careful and well informed consideration of environmental and energy questions that industrialized nations and developing regions now face It is essential for anyone interested in nuclear power issues and climate change The Swedish parliament has moved closer to eliminating nuclear energy even while repeating commitments to reduce the greenhouse gas emissions associated with fossil fuels Nordhaus s Swedish Energy and Environmental Policy SEEP model quantifies the economic results of such a path He analyzes the impact of factors such as deregulation of electricity generation global climate change policies the decline of Sweden s economic growth and the rethinking of its welfare state He also sets the stage for more informed analysis of similarly difficult issues where economic and environmental goals clash
