Distributed Computing Jim Farley,1998-01-01 Distributed computing and Java go together naturally As the first language
designed from the bottom up with networking in mind Java makes it very easy for computers to cooperate Even the simplest
applet running in a browser is a distributed application if you think about it The client running the browser downloads and
executes code that is delivered by some other system But even this simple applet wouldn t be possible without Java s
guarantees of portability and security the applet can run on any platform and can t sabotage its host Of course when we think
of distributed computing we usually think of applications more complex than a client and server communicating with the
same protocol We usually think in terms of programs that make remote procedure calls access remote databases and
collaborate with others to produce a single result Java Distributed Computing discusses how to design and write such
applications It covers Java s RMI Remote Method Invocation facility and CORBA but it doesn t stop there it tells you how to
design your own protocols to build message passing systems and discusses how to use Java s security facilities how to write
multithreaded servers and more It pays special attention to distributed data systems collaboration and applications that have
high bandwidth requirements In the future distributed computing can only become more important Java Distributed
Computing provides a broad introduction to the problems you ll face and the solutions you ll find as you write distributed
computing applications Topics covered in Java Distributed Computing Introduction to Distributed Computing Networking

Knight, Caroline Hazlewood, Rob Lamb, Paul G. Samuels, Koji Shiono,2018-03-05 Practical Channel Hydraulics is a technical
guide for estimating flood water levels in rivers using the innovative software known as the Conveyance and Afflux

Estimation System CES AES The stand alone software is freely available at HR Wallingford's website www.riverconveyance.net The conveyance engine has also been embedded within industry standard river modelling software such as InfoWorks RS and Flood Modeller Pro This 2nd Edition has been greatly expanded through the addition of Chapters 6-8 which now supply the background to the Shiono and Knight Method SKM upon which the CES AES is largely based With the need to estimate river levels more accurately computational methods are now frequently embedded in flood risk management procedures as for example in ISO 18320 Determination of the stage discharge relationship in which both the SKM and CES feature The CES AES incorporates five main components A Roughness Adviser A Conveyance Generator an Uncertainty Estimator a Backwater Module and an Afflux Estimator The SKM provides an alternative approach solving the governing equation analytically or numerically using Excel or with the short FORTRAN program provided Special attention is paid to calculating the distributions of boundary shear stress distributions in channels of different shape and to appropriate formulations for resistance and drag forces including those on trees in floodplains Worked examples are given for flows in a wide range of channel types size shape cover sinuosity ranging from small scale laboratory flumes $Q \approx 0.1 \text{ s}^{-1}$ to European rivers $2,000 \text{ m}^3\text{s}^{-1}$ and large scale world rivers $23,000 \text{ m}^3\text{s}^{-1}$ a 10^7 range in discharge Sites from rivers in the UK France China New Zealand and Ecuador are considered Topics are introduced initially at a simplified level and get progressively more complex in later chapters This book is intended for post graduate level students and practising engineers or hydrologists engaged in flood risk management as well as those who may simply just wish to learn more about modelling flows in rivers
