Engineering Characteristics Of Arid Soils Proceedings Of The First International Symposium London July 1993:

Engineering Characteristics of Arid Soils P.G. Fookes, R.H.G. Parry, 2020-08-26 Soils formed or now existing under arid climatic conditions cover more than one third of the world's land surface. Many have unique characteristics which can pose difficult geotechnical problems. This text considers these problems and suggests ways of overcoming them. **Unsaturated Soil Concepts and Their Application in Geotechnical Practice** David G. Toll, 2013-04-17 model. They conclude that the models using three fitting parameters provide the best fit over a wide range of suctions. Models for soil water characteristic curves are only useful if we have experimental data on which to base them. Agus Leong and Rahardjo, Singapore, present a large number of experimental soil water characteristic curves determined for two types of residual soil from Singapore. They present data for eight different sites. This data set allows them to relate the parameters of the soil water characteristic curves to index properties. They conclude that the relationships derived are suitable to provide a quick preliminary estimate of a soil water characteristic curve. The importance of soil water characteristic curves is emphasized by another contribution dealing with this topic. Agus Rahardjo, Leong and Toll, Singapore, investigate the relationship between mercury intrusion porosimetry measurements and soil water characteristic curves. The porosimetry measurements are presented as soil air characteristic curves. The slopes of the soil air characteristic curves are found to be similar to the slopes of the soil water characteristic curves. The equivalent pore diameters calculated from the mercury entry value and the air entry value appear to be related. Therefore, it is suggested that porosimetry data can be used to construct an estimate of the soil water characteristic curve.

Bibliographic Index, 1994. *Hot Deserts* M. J. Walker, 2012. This volume provides an authoritative and comprehensive state of the art review of hot desert terrains in all parts of the world, their geomaterials and influence on civil engineering site investigation, design and construction. It primarily covers conditions and materials in modern hot deserts but there is also coverage of unmodified ancient desert soils that exhibit engineering behaviour similar to modern desert materials. Thorough and up to date guidance on modern field evaluation and ground investigation techniques in hot arid areas is provided, including reference to a new approach to the desert model and detailed specialised assessments of the latest methods for materials characterisation and testing. The volume is based on world wide experience in hot desert terrain and draws upon the knowledge and expertise of the members of a Geological Society Engineering Group Working Party comprising practising geologists, geomorphologists and civil engineers with a wealth of varied but complementary experience of working in hot deserts. It is an essential reference book for professionals as well as a valuable textbook for students. It is written in a style that is accessible to the non specialist. A comprehensive glossary is also included. The Geological Society of London, founded in 1807, the Geological Society of London is the oldest geological society in the world and one of the largest publishers in the Earth sciences. The Society publishes a wide range of high quality peer reviewed titles for academics and professionals working in the geosciences and enjoys an enviable international reputation for the quality of its work. *The Peter Fookes*

Engineering Geological Legacy in Geomodels, Geomaterials and Geomorphology J.S. Griffiths, D.P. Giles, J.A. Davis, J.J. Dunlop, 2025-11-04 This book is a celebration of the life work and legacy of Professor Peter G Fookes 1933 2020 As a professional engineering geologist he worked in over 100 countries produced some 200 publications and was instrumental in setting up MSc programmes at Imperial College and Queen Mary College London From the Geological Society he was awarded the William Smith Medal 1985 and was the first recipient of the Glossop Medal 1996 Although a mainstream geologist his background in chemistry ensured he was at the forefront in concrete research and the use of geomaterials Working with academic geomorphologists notably Denys Brunsden David Jones John Doornkamp and Sir Ron Cooke he led the development of engineering geomorphology as a genuine adjunct subject to engineering geology In addition his Glossop Lecture set engineering geology along the path of developing geomodels for use in understanding the ground conditions pertaining to engineering construction

Harvest of research outcomes to confirm achievement of the millennium development goals Simeon O. Jekayinfa, 2017-09-15 In 2000 the leaders of member states of the United Nations adopted the Millennium Declaration which set out a series of clear commitments goals and targets to achieve Human Development These ambitious goals were subsequently refined into eight Millennium Development Goals MDGs designed to provide a framework for accountability donor coordination and resource mobilization The MDGs are Eradicate extreme poverty and hunger achieve universal primary education promote gender equality and empower women reduce child mortality improve maternal health combat HIV AIDS malaria and other diseases ensure environmental sustainability and develop a global partnership for development The first seven of these Goals are concerned with outcomes identifying the progress towards certain standards of human well being and decent living which should be achieved globally and nationally by 2015 The eighth Goal is concerned with relationships identifying various aspects of a global partnership for development which must be forged to support the realization of these poverty reduction human development and environmental sustainability standards The MDGs provide opportunities to start working from real life development problems Addressing these problems requires multidisciplinary approaches that combine the natural sciences the life sciences and technical approaches with social science approaches The challenge is to integrate social economic political and institutional concerns into research strategy To be able to achieve this there is a need to establish a linking pin between research policy and practice in Nigeria The aim of such a linking pin would be to synthesize research outcomes on specific MDG related topics and to translate these into implications for policy and decision making through easily accessible gathering where individual stakeholders can air their views The articles contained in this book address research outcomes from stakeholders Sociologists Economists Agronomists Agricultural Engineers Civil Engineers Environmental Scientists and Engineers Geographers Geologists Microbiologists Medical Practitioners Policy Makers Educationists etc to confirm achievement of Millennium Development Goals in Nigeria and other neighboring countries
