Engineering of Mind James Sacra Albus,2001

Engineering of Mind James S. Albus,Alexander M.

Meystel,2001-09-13 Presenting a reference model architecture for the design of intelligent systems Engineering of Mind presents the foundations for a computational theory of intelligence It discusses the main streams of investigation that will eventually converge in a scientific theory of mind and proposes an avenue of research that might best lead to the development of truly intelligent systems This book presents a model of the brain as a hierarchy of massive parallel computational modules and data structures interconnected by information pathways Using this as the basic model on which intelligent systems should be based the authors propose a reference model architecture that accommodates concepts from artificial intelligence control theory image understanding signal processing and decision theory Algorithms procedures and data embedded within this architecture would enable the analysis of situations the formulation of plans the choice of behaviors and the computation of uncertainties The computational power to implement the model can be achieved in practical systems in the foreseeable future through hierarchical and parallel distribution of computational tasks The authors reference model architecture is expressed in terms of the Real time Control System RCS that has been developed primarily at the National Institute of Standards and Technology Suitable for engineers computer scientists researchers and students Engineering of Mind blends current theory and practice to achieve a coherent model for the design of intelligent systems
