Endothelial Mechanisms Of Vasomotor Control With Special Reference To Coronary Circulation:

Endothelial Mechanisms of Vasomotor Control H. Drexler, A.M. Zeiher, E. Bassenge, H. Just, 2012-12-06 In recent years we have witnessed a rapid expansion of our knowledge regarding the role of the endothelium in the control of vascular tone and organ perfusion in health and disease Physiology pharmacology and molecular biology have uncovered a wealth of information on structure and function of this heretofore largely neglected organ Clinical medicine is now called upon to define the clinical significance of these observations that imply the mechanisms of blood coagulation e.g. the interaction of thrombocytes with the endothelium vasomotor control and specifically the regulation of smooth muscle tone with consequences for vascular resistance and conductance and organ blood flow Finally metabolism of lipids with the everlasting problem of atherosclerosis is an important aspect In a second step implications regarding the improvement of current therapeutic concepts as well as the development of new modalities of pharmacotherapy will have to be discussed The topic addressed by the 1990 Gargellen Conference Endothelial Mechanisms of Vasomotor Control clearly is of interest for both basic scientists and clinicians It has been the aim of the organizers the Society for Cooperation in Medical Science SCMS with this and the previous symposia to foster and support both basic science and clinical research Research in medicine today shows two major directions of development on the one hand increasing involvement of the basic sciences and their methodology On the other hand statistical validation of concepts and therapeutic strategies in large scale population and multicenter studies

Vascular Innervation and Receptor Mechanisms Rolf Uddman, 2012-12-02 Vascular Innervation and Receptor Mechanisms New Perspectives reviews the areas of structure function and pathophysiology of the circulatory system The text focuses on the role of neuropeptides and structural function of endothelium The book begins with a brief discussion on the background of autonomic and sensory nerves in the circulatory system which is provided in Chapter 1 Having established the basic studies in the circulatory system the book moves to the discussion on the analysis of peptidergic innervations and peptides in vascular control in various disorders The last part of the book features the clinical applications of neuropeptides perivascular peptides and vasoactive peptides in different diseases and regulation such as cardiovascular regulation hypertension congestive heart failure and migraine and cluster headache The text will be a good reference to both students and professionals in the fields of biology chemistry and medicine

New therapeutic targets for human placental angiogenesis diseases Carlos Alonso Escudero, 2015-04-15 A large number of publications have described impaired angiogenesis and vasculogenesis present in the feto placental circulation after pregnancy diseases such as pre-eclamptic pregnancies gestational diabetes and intrauterine growth restriction among others Results suggest impaired secretion and activity of pro-angiogenic factors such as vascular endothelial growth factor VEGF interleukin 8 IL-8 adenosine

and nitric oxide associates with compromised secretion and activity of anti angiogenic factors such as soluble receptor of VEGF sFlt 1 thrombospondin 2 endostatin among others More recent evidences include the participation of endothelial progenitor cells EPC which circulating number is reduced infeto placental circulation in pregnancies such as pre eclampsia Despite this knowledge therapies for placental angiogenesis recovery during pathological pregnancies are far to be tested However from the cardiovascular field it has been described the administration of EPC alone or used as gene transfer therapy or it has been described the potential role of statins HMGC_oA inhibitors or angiotensin converter enzyme ACE inhibitors for enhancing angiogenesis Finally feto placental tissue is an exceptional source of progenitor and stem cells which could be used for treated other human diseases such as stroke myocardial infarction hypertension or even cancer In this research topic authors highlight physiopatological and clinical importance of the impaired placental angiogenesis and suggest potential targets for developing innovative therapies

Tomanek,2012-10-19 Ischemic heart disease is the leading cause of morbidity and mortality in the developed world The high metabolism and oxygen demand of the cardiac myocardium depends on both a high blood flow and a rich capillary density For this reason the growth of the coronary vasculature is vital not only in early development but also in the adult faced with various stresses Novel technologies have enabled the discovery of the molecular mechanisms underlying the growth and assembly coronary vessels and this volume covers the hierarchy of the coronary

vasculature from its embryonic origins through its postnatal growth adulthood and senescence Chapters address normal coronary development coronary anomalies and their possible underlying developmental errors coronary vessel adaptations to exercise training aging hypoxia myocardial ischemia and cardiac hypertrophy This comprehensive overview of current research in coronary vessels and myocardial perfusion was written by Dr Robert J Tomanek Emeritus Professor of Anatomy and Cell Biology at the University of Iowa The book reviews discusses and integrates findings from various areas of coronary vasculature research and as a result will be a valuable reference source for cardiovascular scientists and physicians for many years to come
