Machine Learning and Non-volatile Memories Rino Micheloni,Cristian Zambelli,2022-05-25 This book presents the basics of both NAND flash storage and machine learning

detailing the storage problems the latter can help to solve At a first sight machine learning and non volatile memories seem very far away from each other Machine learning implies mathematics algorithms and a lot of computation non volatile memories are solid state devices used to store information having the amazing capability of retaining the information even without power supply This book will help the reader understand how these two worlds can work together bringing a lot of value to each other In particular the book covers two main fields of application analog neural networks NNs and solid state drives SSDs After reviewing the basics of machine learning in Chapter 1 Chapter 2 shows how neural networks can mimic the human brain to accomplish this result neural networks have to perform a specific computation called vector by matrix VbM multiplication which is particularly power hungry In the digital domain VbM is implemented by means of logic gates which dictate both the area occupation and the power consumption the combination of the two poses serious challenges to the hardware scalability thus limiting the size of the neural network itself especially in terms of the number of processable inputs and outputs Non volatile memories phase change memories in Chapter 3 resistive memories in Chapter 4 and 3D flash memories in Chapter 5 and Chapter 6 enable the analog implementation of the VbM also called neuromorphic architecture which can easily beat the equivalent digital implementation in terms of both speed and energy consumption SSDs and flash memories are strictly coupled together as 3D flash scales there is a significant amount of work that has to be done in order to optimize the overall performances of SSDs Machine learning has emerged as a viable solution in many stages of this process After introducing the main flash reliability issues Chapter 7 shows both supervised and un supervised machine learning techniques that can be applied to NAND In addition Chapter 7 deals with algorithms and techniques for a pro active reliability management of SSDs Last but not least the last section of Chapter 7 discusses the next challenge for machine learning in the context of the so called computational storage No doubt that machine learning and non volatile memories can help each other but we are just at the beginning of the journey this book helps researchers understand the basics of each field by providing real application examples hopefully providing a good starting point for the next level of development

Machine Intelligence A. Gomersall,2013-03-14 In 1981 Robotics Bibliography was published containing over 1 800 references on industrial robot research and development culled from the scientific literature over the previous 12 years It was felt that sensors for use with industrial robots merited a section and accordingly just over 200 papers were included It is a sign of the increased research into sensors in production engineering that this bibliography on both the contact and non contact forms has appeared less than three years after that first comprehensive collection of references appeared In a review in 1975 Professor Warnecke of IPA Stuttgart drew attention to the lack of sensors for touch and vision Since then research workers in various companies universities and national laboratories in the USA the UK Italy Germany and Japan have concentrated on improving sensor capabilities particularly utilising vision artificial intelligence and pattern recognition principles As a result many research projects are on the brink of commercial exploitation and development This bibliography brings together the documentation on that research and development highlighting the advances made in vision systems but not neglecting the development of tactile sensors of various types No bibliography can ever be comprehensive but significant contributions from research workers and production engineers from the major industrialised countries over the last 12 years have been included
