

Reform in China

Challenges and Choices

A Summary and Analysis of the Chinese Economic System Reform Research Institute Survey

Edited by Bruce L. Reynolds, Union College

This work presents the fruits of what is arguably the most extraordinary empirical investigation undertaken in twentieth-century China. In October 1984, in the wake of stunning reforms in the agricultural sector, the Party issued a clarion call to push reform into China's cities and the industrial sector. Thus by 1985 the question was: how is reform faring, and what is to be next? Foreign exchange imbalances, inflation, and many other problems had come to the fore and were crying out for explanation and solution.

In this context the State Council Economic Reform Research Institute, under the direct patronage of Premier Zhao Ziyang, launched a research project to get to the bottom of these issues through a series of six field investigations. The reports that emanated from these investigations, which are recorded in this book, represent the findings of these investigations. The young investigators, many of them are a rising defense of urban reform. The young investigators, many of them are students, marshaled millions of facts and put them to work. In the process they offer us an array of fascinating insights into how Chinese society functions, from the motivations of factory managers to the more familiar question of whether wheat should work outside the home.

Prospects for Socialism in China's Countryside

Peg Howard, Simon Fraser University

Examining the impact of controversial post-Mao rural economic reforms—which greatly expanded the role of money, markets, and commodity exchange—in production relations, this book discusses the evolution of responsibility systems, focusing on the demands of peasant initiatives and leaders' responses to uncover the nature of communication in policy formation. The themes discussed in the development of this study include the evolution and role of specialized households, the impact of new economic associations on preexisting cooperative institutions and relations, the impact of the reforms on the development of rural industries, and the consequences over the roles of village leaders, growing income inequality, grain production, planning, uneven development, state versus collective versus private accumulation, and the essential nature of contract relations.

Based on intensive scholarly research and interviews with peasants, herdsmen, rural factory workers, and university students from the countryside and village, commune, and county leaders in Yunnan, Sichuan, Fujian, Shanghai, and Inner Mongolia, this study questions a common assumption that there is an inherent incompatibility between commodity relations and communal or cooperative values and relations. It seeks to uncover how the reforms may improve the prospects for development of autonomous self-managing producers' collectives, but also tries to expose their real limitations.
