Foundations of Pulsed Power Technology Jane Lehr, Pralhad Ron, 2017-07-24 Examines the foundation of pulse power technology in detail to optimize the technology in modern engineering settings Pulsed power technologies could be an answer to many cutting edge applications The challenge is in how to develop this high power high energy technology to fit current market demands of low energy consuming applications This book provides a comprehensive look at pulsed power technology and shows how it can be improved upon for the world of today and tomorrow Foundations of Pulsed Power

Technology focuses on the design and construction of the building blocks as well as their optimum assembly for synergetic high performance of the overall pulsed power system Filled with numerous design examples throughout the book offers chapter coverage on various subjects such as Marx generators and Marx like circuits pulse transformers pulse forming lines closing switches opening switches multi gigawatt to multi terawatt systems energy storage in capacitor banks electrical breakdown in gases electrical breakdown in solids liquids and vacuum pulsed voltage and current measurements electromagnetic interference and noise suppression and EM topology for interference control In addition the book Acts as a reference for practicing engineers as well as a teaching text Features relevant design equations derived from the fundamental concepts in a single reference Contains lucid presentations of the mechanisms of electrical breakdown in gaseous liquid solid and vacuum dielectrics Provides extensive illustrations and references Foundations of Pulsed Power Technology will be an invaluable companion for professionals working in the fields of relativistic electron beams intense bursts of light and heavy ions flash X ray systems pulsed high magnetic fields ultra wide band electromagnetics nuclear electromagnetic pulse simulation high density fusion plasma and high energy rate metal forming techniques **Pulsed Power** Gennady A. Mesyats, 2007-02-03 Mesyats Pulsed Power provides in depth coverage of the generation of pulsed electric power electron and ion beams and various types of pulsed electromagnetic radiation The electric power that can be produced by the methods described ranges from 10⁶ to 10¹⁴W for pulse durations of 10⁻¹⁰ to 10⁻⁷s The book consists of nine parts containing 28 chapters which deal with various aspects of pulsed power and high power electronics and cover a concise theory of electric circuits as applied to nanosecond pulse technology physics of fast processes occurring in electrical discharges in vacuum gases and liquids phenomena in long lines mechanisms of operation and designs of high power gas discharge plasma and semiconductor closing and opening switches as well as of high power electric pulse generators using these switches solid state semiconductor and magnetic methods of production and transformation of nanosecond high power pulses and methods of production of high power pulsed electron and ion beams The closing part describes methods applied to produce high power nanosecond pulsed X rays laser beams microwaves and ultrawideband electromagnetic radiation This all embracing book covers gas laser semiconductor and magnetic circuit elements the phenomenon of explosive electron emission discovered by the author diodes of various types including semiconductor diodes based on the SOS effect discovered with participation of the author and methods of production of various types of high power pulsed radiation

energy continues to grow the characteristics of randomness variability weak inertia and damping have posed great challenges to the power generation operation and control There is an urgent need to provide efficient safe and diverse technological choices for the construction of the renewable energy dominated power system 1 Improving the efficiency of renewable energy generation and transmission 2 Increasing the capability of renewable energy to support and regulate the system voltage frequency and inertia thus guaranteeing the security and stability operation of power systems 3 Scaling up development of offshore wind power and distributed renewable energy in remote regions like Gobi Desert requires technological innovation for further development
